

Industrial Hygienist

The successful candidate will possess an advanced degree (Masters or PhD) in Industrial Hygiene (IH) or a closely related science/engineering discipline. An undergraduate degree in an engineering or science discipline is preferred and will be given strong consideration.

Preferred candidates will have an understanding of IH aspects of industrial processes and plant design and construction, ventilation system evaluation/design, microbial indoor air quality, noise evaluation and control, and qualitative/quantitative exposure assessment.

The candidate will work in a team setting with similarly qualified individuals and have the opportunity to participate in diverse multi-disciplinary projects with, for example, toxicologists, epidemiologists and human factors engineers.

Project examples include:

- Conceptual design of ventilation system for exposure control
- Microbial Indoor Air Quality investigation, determination of root cause
- Building science investigation to aid shelter-in-place capability
- IH review and input at various stages of project design, procurement and construction
- Procedure improvements for providing IH input to project development
- Field based exposure assessments

The preferred candidate should be willing to travel and take on a number of roles including field investigation, program development, tool or procedure development. The individual must be equally effective in both business headquarters and in-plant settings.

Candidates applying for the position should demonstrate critical thinking skills, problem solving skills, strong verbal and written communication skills, strong computer skills (relational databases, spreadsheets, word processing), work well in a team environment, adapt to changing priorities and be detail oriented.
