*The quality of the images is absolutely CRITICAL to the jurying process. Please follow these guidelines in preparing your images for digital review:

- the image should be large enough, size-wise, to fill the PowerPoint screen without re-sizing 'up' (re-sizing 'down,' not a problem). If it fits the PowerPoint screen - the image quality will not be compromised when projected even if it's 72 dpi
- the image resolution should match the projector resolution, which usually tops out at 1024 x 768 pixels.

Bottomline: if the image fits the PowerPoint screen-size + is 1024 x 768 pixels, 72 dpi should be fine.
