UMass Lowell
Survey of Massachusetts Likely Voters

Field Dates: June 7-15, 2022

N=1,000 Massachusetts Likely Voters
Adjusted Margin of Error: +/- 4.0%

Margins of error have been adjusted to include for design effects resulting from weighting and survey design features

Methodology in Brief

YouGov interviewed 1,144 Massachusetts Registered Voters who were then matched down to a sample of 1,000 to produce the final dataset. The respondents were matched to a sampling frame on gender, age, race, and education. The frame of MA Registered Voters was constructed by stratified sampling from a combined frame of the 2019 American Community Survey (ACS) and the 2020 Current Population Survey (CPS), with selection within strata by weighted sampling with replacement. The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, years of education, and region. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

All voters included in the sample are registered to vote and the initial weight is constructed to generate a sample representative of the registered voter frame. The weight is then adjusted based on a 3-question likely voter screen based on past primary voting behavior, strength of vote intention, and reported attention to the campaign. Those reporting greater attention, more frequent past behavior, and a greater certainty of voting receive greater weight in the final model disposition. This second weight is used in all public models.

UMass Lowell is a public institution and releases surveys as a source of public information. We offer a complete methodology report in adherence with standards of the AAPOR Transparency Initiative, as well an extensive set of crosstabs. Our goal is complete transparency in the reporting of our findings. If there is something you do not see here, but wish you did, please contact Director, Dr. Joshua J. Dyck (joshua_dyck@uml.edu; @drjjdyck) or Associate Director, Dr. John Cluverius (john_cluverius@uml.edu; @JohnCluverius).

UML923c For the first time in the United States, medication abortions, where people who are pregnant take medication and complete their first-trimester abortion at home, exceeded the number of abortion procedures in clinics and hospitals. Which of the following statements is closest to your position on at-home medication abortions in Massachusetts?

31% People should be able to get the medicine for medication abortions at pharmacies without a prescription
28 People should be able to get the medicine for medication abortions with a prescription after a telehealth appointment with a medical provider
29 People should only be able to obtain the medicine for a medication abortion with a prescription after an in-person appointment with a medical provider
13 No one should be allowed to have a medication abortion at home

	Party ID Leaned		
	Democrat	Independent	Republican
OTC	39	28	15
