## UMass Lowell

### Survey of New Hampshire Likely Voters

Survey produced by Dr. John Cluverius, Director of Survey Research, and  
Sierra Burke and Jihan Abouchamcha, Student Assistants

Field Dates: Oct. 14 – Oct. 25, 2022

N=600 New Hampshire Likely Voters

Adjusted Margin of Error: +/-5.1%

Margins of error have been adjusted to include for design effects  
resulting from weighting and survey design features

---

#### Methodology in Brief

YouGov interviewed 697 registered voters who were then matched down to a sample of 600 to produce the final dataset. The respondents were matched to a sampling frame on gender, age, race, and education. The sampling frame is a politically representative "modeled frame" of NH adults, based upon the American Community Survey (ACS) public use microdata file, public voter file records, the 2020 Current Population Survey (CPS) Voting and Registration supplements, the 2020 National Election Pool (NEP) exit poll, and the 2020 CES surveys, including demographics and 2020 presidential vote. The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, years of education, presvote20 and ownhome. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles. Then, likely voter profiles were given slightly more weight than their unlikely voter counterparts. The weights were then post-stratified on a two-way stratification of gender and age (4-categories), using benchmarks obtained from the voterfile for 2018 midterm voters. The weights were then post-stratified on the proportions of votes from the 2022 primary election for each party. Finally, a four-way stratification of gender, age (4-categories), race (2-categories), and education (4-categories), was performed to produce the final likely voter weight.

UMass Lowell is a public institution and releases surveys as a source of public information. We offer a complete methodology report in adherence with standards of the AAPOR Transparency Initiative, as well an extensive set of crosstabs. Our goal is complete transparency in the reporting of our findings. If there is something you do not see here, but wish you did, please contact Director of Survey Research, Dr. John Cluverius ([john\\_cluverius@uml.edu](mailto:john_cluverius@uml.edu); [@JohnCluverius](#)).

For the first time in the United States, medication abortions, where people who are pregnant take medication and complete their first-trimester abortion at home, exceeded the number of abortion procedures in clinics and hospitals. Which of the following statements is closest to your position on at-home medication abortions in Massachusetts?

- 27% People should be able to get the medicine for medication abortions at pharmacies without a prescription
- 27 People should be able to get the medicine for medication abortions with a prescription after a telehealth appointment with a medical provider
- 31 People should only be able to obtain the medicine for a medication abortion with a prescription after an in-person appointment with a medical provider
- 15 No one should be allowed to have a medication abortion at home
