Welcome to the UMass Lowell wireless network. This is an intro paragraph so users know what this document is for. It spans across the two columns of instructions and is Gill Sans MT, 10pt, italic.

Setting Up Your Mac (Leopard)
Use the following instructions to set up your Mac to access UML’s wireless network.

1. Go to the Apple Menu, and select System Preferences.

   About This Mac
   Software Update...
   Mac OS X Software...

2. Click the Network system preference icon in the third row. If necessary, click the lock icon in the lower left to make changes.

3. Click AirPort on the left, and click Advanced... at the bottom right.

4. Click the 802.1X tab

5. Click the + on the lower left, and click Add User Profile...

   Add User Profile
   Add Login Window Profile
   Add System Profile
6. In this window, students should make the following selections on the right:

(Note that the field names are not bold but the data entered is)
User Name: email username without @uml.edu
Password: email password
Wireless Network: uml-admin or uml-student
Authentication: Ensure that PEAP is the only option checked. (optionally drag it to the top of the list)

7. Click OK.

8. Click Apply.

9. If you need to, turn on the wireless radio by clicking Turn AirPort On.

Accessing the UML Wireless Network

10. When in an area with UML wireless coverage, select uml-student or uml-admin from the AirPort menu to connect.

After a few seconds, you will be asked to enter your username and password and click OK.

User Name: (your UML email address)
Password: (your UML email password)

NOTE: The password will appear as ****** as you type.

Congratulations! You are now connected to the UML network.

Please note that we have found some users running 10.5 that have configured their card properly and are still unable to connect. The Network Services team is aware of this and is working with users individually on this problem. Please call the Help Desk (ext 4357) and put in a ticket if you need assistance. Thank you.
