- Army ROTC: 989
- Art History: 991
- Asian Studies: 995
- General Information: 995
- Comparative Arts: 1001
Breadth of Knowledge (BOK)

Students are required to fulfill the following Breadth of Knowledge requirements from courses outside of their major department, with no more than two courses from a single discipline applied to the same criterion. Students may use up to two courses from their minor to also satisfy the Breadth of Knowledge. The Breadth of Knowledge requirement is designed to familiarize the student with different perspectives on knowledge. Students satisfy this requirement with a minimum of 36 credits in total, distributed as follows:

- 3 Social Sciences Perspective (SS) - 9 credits
- 3 Arts and Humanities Perspective (AH) - 9 credits
- 2 Sciences with Lab Perspective (SCL) - 6 credits minimum
- 1 STEM Perspective (STEM) - 3 credits
- College Writing I and II (CW) - 6 credits
- Math Perspective (MATH) - 3 credits minimum

To find upcoming courses that meet any of these requirements, scroll to the bottom of the Course Finder (https://www.uml.edu/student-dashboard/#my-academics/class-schedule/filters) to search Core Curriculum options.

Breadth of Knowledge Designations and Perspective Statements

Courses offered to the general university population by the appropriate departments automatically receive the designations listed below. Departments may request exceptions (https://www.uml.edu/docs/student_exception_form_tcm18-3512.pdf) for offered courses that are cross-disciplinary. The perspective statements provided are intended to be shared with students to help them develop a coherent sense of the methods and approaches of the disciplines across the courses they will take.

SS - The Social Sciences perspective draws upon empirical study of behavior, society and social relationships. All courses offered by Economics, Political Science, Psychology, Criminal Justice and Sociology, by definition, carry this perspective.

AH - The Arts and Humanities perspective is characterized by the interpretive analysis, critique, and creative and aesthetic expression of ideas and values. All courses offered by Art, English, History, Music, Philosophy, and World Languages and Cultures (including language courses), by definition, carry this perspective.

SCL - The Science with Lab Perspective represents the systematic, organized, and evidence-based empirical study of the natural and physical world. All courses in the natural and physical sciences with accompanying laboratory work offered by Biology; Chemistry; Earth, Environmental and Atmospheric Sciences; and Physics, by definition, carry this perspective.

STEM - The STEM Perspective removes traditional disciplinary boundaries to integrate approaches to analysis and problem solving, drawing from all fields of the sciences, technology, engineering and math. Science courses without labs, math courses, courses offered by Computer Science and Biomedical and Nutritional Sciences, and courses offered by engineering departments, by definition, carry this perspective.

CW - The College Writing requirement helps students integrate their learning across the BOK areas and prepares them to write and research in their major discipline. College Writing I and II and their equivalent courses fulfill this Breadth of Knowledge area.

MATH - The Mathematics Perspective is characterized by the logical analysis of quantity, structure, space, and change in applied and theoretical contexts. All courses offered by the Mathematical Sciences department, by definition, carry this perspective.

Interdisciplinary and Cross-Disciplinary Courses Seeking Breadth of Knowledge Designations

Interdisciplinary or cross-disciplinary courses which do not fall neatly into the disciplines specified above may apply to the Core Curriculum Committee of the Faculty Senate for the SS, AH, SCL, STEM, or MATH designation. An interdisciplinary or cross-disciplinary course may carry more than one BOK Designation, but can be used by students to fulfill only one BOK requirement.

Essential Learning Outcomes (ELOs)

Under UMass Lowell’s Core Curriculum, students must have the opportunity to master each of seven Essential Learning Outcomes (ELOs). These ELOs may be met within the major or through other courses, including courses that fulfill Breadth of Knowledge requirements. Consequently, all departments may identify courses within their majors that allow students to demonstrate particular ELOs, and submit these courses for ELO designation approval. Approved courses will be tagged in the catalog in course listings and on Degree Pathways and on Advisement Reports in SiS.

The seven ELOs are:

- Applied and Integrative Learning (AIL) (https://www.uml.edu/resources/catalog-
Students can synthesize their learning experiences across the curriculum.

- **Critical Thinking and Problem Solving (CTPS)**: Students can approach problems and evaluate evidence to draw informed conclusions.

- **Diversity and Cultural Awareness (DCA)**: Students can address complex questions about diverse cultural and social groups.

- **Information Literacy (IL)**: Students can successfully locate, evaluate and use data to better operate in a complex global landscape.

- **Quantitative Literacy (QL)**: Students can understand and express arguments using numerical data.

- **Social Responsibility and Ethics (SRE)**: Students can assess moral beliefs and practices to make a positive difference and contribute to a more sustainable global and local environment.

- **Written and Oral Communication (Emphasizing Writing in the Discipline) (WOC)**: Students can mount arguments, marshal evidence, and deploy rhetorical devices, drawing on genres and styles appropriate to the discipline.

To find upcoming courses that meet any of these requirements, scroll to the bottom of the Course Finder to search Core Curriculum options.

### ELO Policies

- 1000-level courses may be designated with no more than 1 ELO; 2000- and 3000-level courses may be designated with no more than 2 ELOs; 4000-level courses may be designated with no more than 3 ELOs.

- Interdisciplinary courses may receive ELO designations as well as a Breadth of Knowledge designation.

- A single course may introduce, reinforce and assess an ELO. Alternatively, an ELO designation may be assigned to the most advanced course in a series of courses addressing a particular ELO.

### Majors

UMass Lowell is a comprehensive research university offering more than 100 undergraduate majors in a wide array of disciplines across our five colleges. Some programs allow students to earn both a bachelor’s and a master’s degree in as little as five years. Minors within academic departments, as well as interdisciplinary minors, allow students to pursue an additional area of interest.

- **American Studies**

- **Applied Biomedical Sciences**

- **Art**

- **Biology**

1 Interdisciplinary majors.
Undergraduate Deferral Policy

A student may request a deferment of enrollment up to one year beyond the date when he or she was scheduled to begin his or her undergraduate program. If the one-year time period is exceeded, the student must submit a new application and application fee. The deferral must be requested before the start of the semester for which the student was originally accepted.

Students admitted to the Nursing program are not permitted to defer admission but may defer an application for re-evaluation for a future fall term. We do not permit Nursing students to defer an application to the spring semester.

Students who defer their application and have a change in their educational history must be re-evaluated based on the new grades and coursework.

Students are responsible for communicating any updates to their application, including, but not limited to: educational history, disciplinary history, and biographical information, when requesting a deferral.

Request a deferment (https://admissions.uml.edu/defer).

Grading Policies

Please review the following grading policies:

- Grading Policies
- Mid-term Grades
- Pass-No Credit Grading Scheme
  - Spring 2020 Grading Scheme (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
  - Fall 2020/Spring 2021 Grading Scheme (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
- Satisfactory- Unsatisfactory Course Registration
- Incomplete Courses
- Audited Courses
- Grade Changes
- Course Grade Appeal Policy

The following qualitative letter grades are employed by faculty members to characterize the quality of a students work in a course:

<table>
<thead>
<tr>
<th>Letter</th>
<th>Details</th>
<th>Numerical</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Superior Work: Highest Quality</td>
<td>4.0</td>
</tr>
<tr>
<td>A-</td>
<td>High Honors Quality</td>
<td>3.7</td>
</tr>
<tr>
<td>B+</td>
<td>High Quality</td>
<td>3.3</td>
</tr>
<tr>
<td>B</td>
<td>Basic Honors Quality</td>
<td>3.0</td>
</tr>
<tr>
<td>B-</td>
<td>Below Honors Quality</td>
<td>2.7</td>
</tr>
<tr>
<td>C+</td>
<td>Above Satisfactory Quality</td>
<td>2.3</td>
</tr>
<tr>
<td>C</td>
<td>Satisfactory</td>
<td>2.0</td>
</tr>
<tr>
<td>C-</td>
<td>Below Satisfactory Quality</td>
<td>1.7</td>
</tr>
<tr>
<td>D+</td>
<td>Above Minimum Passing</td>
<td>1.3</td>
</tr>
<tr>
<td>D</td>
<td>Minimum Passing</td>
<td>1.0</td>
</tr>
<tr>
<td>F</td>
<td>Failed</td>
<td>0.0</td>
</tr>
<tr>
<td>FX</td>
<td>Failed due to Academic Misconduct (may not be replaced or deleted)</td>
<td>0.0</td>
</tr>
</tbody>
</table>

In addition to the above qualitative letter grades, the following symbols are used to designate special enrollment provisions or course statuses and do not affect the students academic average:

<table>
<thead>
<tr>
<th>Abbreviation</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>AU</td>
<td>Audit</td>
</tr>
<tr>
<td>W</td>
<td>Withdrawn</td>
</tr>
<tr>
<td>CR</td>
<td>Credit Only</td>

<td>Voluntary Withdrawal (before deadline-to-withdraw indicated on academic calendar)</td>
</tr>
<tr>
<td>X</td>
<td>Administrative Withdrawal</td>
</tr>
<tr>
<td>NC</td>
<td>No Credit</td>
</tr>
<tr>
<td>P</td>
<td>Satisfactory Grade C- or Above</td>
</tr>
<tr>
<td>S</td>
<td>Satisfactory Grade C or Above</td>
</tr>
<tr>
<td>U</td>
<td>Unsatisfactory Failed</td>
</tr>
<tr>
<td>T</td>
<td>Transfer Credit</td>
</tr>
<tr>
<td>Y</td>
<td>University Withdrawal for Non-Academic Reasons</td>
</tr>
</tbody>
</table>

Pass-No Credit Grading Scheme

Students may elect to register on a pass-no credit basis for a maximum of four unrestricted elective courses. A student may not change grading scheme from letter grade to pass-no credit or from pass-no credit to letter grade after the established deadline for adding a course.

A pass-no credit course cannot be presented in fulfillment of University Core Curriculum requirements, major programs, minor programs, or specifically designated courses (collateral requirements) of an established curriculum. A grade of P indicates that a students performance merits an evaluation of C- or better. NC indicates that a course has been failed, but that such failure is without prejudice to the students cumulative average. Although appropriate credits are granted to students when grades of P have been assigned, these credits are not qualitatively weighted and hence do not affect a students academic average. The entry NC will not keep an otherwise qualified student from deans list recognition. Students must request pass-no credit grading scheme for each course by the last date to add/drop.
Satisfactory-Unsatisfactory Course Registration

Certain courses (e.g., practicum experiences, advanced seminars, and directed studies) may be graded as satisfactory or unsatisfactory. A grade of S indicates that a student's performance merits an evaluation of C or better. U indicates a course evaluation of less than C. Although appropriate credits are granted to students when grades of S have been assigned, these credits are not qualitatively weighted and hence do not affect a student's academic average. A grade of U indicates that attempted course credits have not been granted and is awarded without prejudice to a student's cumulative average.

Incomplete Courses

The symbol INC (incomplete) is a temporary notation which is assigned for incomplete work in courses when the records of students justify the expectation that they will obtain a passing grade, but for emergency reasons they have missed a minor part of the course requirement. Any missed final examination or other final course evaluation requires a student explanation within 48 hours so the instructor can file the proper course notation with the Office of the Registrar.

A student who has evidenced an unsatisfactory course record, who has failed to complete a majority portion of an instructor's course requirements, or who fails to provide an instructor with a satisfactory reason for absence from a final examination or final course evaluation within the specified 48 hour period may not be assigned the letter symbol INC.

Responsibility for making arrangements with an instructor to complete all outstanding course work rests entirely with the student, who must complete all course work by the final week of classes for the succeeding semester.

At the end of the official make-up period (or, in the event of a substantiated student emergency, at the end of an extended make-up period), the Office of the Registrar will convert the temporary notation of INC to the appropriate permanent symbol. This permanent notation will be one of the following: 1) a letter grade which is filed by an instructor at the end of the make-up period to designate the final course standing of a student who has made up incomplete course requirements, 2) course work not completed by the final week of classes for the succeeding semester will convert to a grade of F, or 3) the letter symbol of X, which the dean of the college in which the student is enrolled as a degree candidate may authorize to designate that a student has withdrawn from the University after the end of the semester for documented personal emergency (cf. University Withdrawal After the End of the Semester), 4) Medical emergencies will need to complete the Request for Medical Withdrawal form (https://www.uml.edu/thesolutioncenter/Forms/Academic-Forms.aspx).

Limited extensions of the make-up period may be granted to students for serious medical reasons and for documented personal emergencies. Requests for such extensions are approved by the dean of the college in which students are enrolled as degree candidates and must be filed no later than one calendar week preceding the established deadline for instructors to submit final grades for incomplete courses.

Audited Courses

A student may enroll in credit courses as an auditor with appropriate approval. Forms and instructions for registration as an auditor may be obtained from the Office of the Registrar. No charge is levied on full-time students for audited courses. No credit or grade will be recorded for an audited course, but the symbol AU will be listed on the permanent record. A change from audit to credit status, or from credit status to audit, may not be made after the deadline for adding a course (10th class day).

Students who have audited a course subsequently may not earn credit in the same course through tests of the College Level Examination Program or through other authorized examination procedures for course challenge.

Grade Changes

At the end of each semester, grades are available to students via their self service account in SIS. All course grades become a part of the students official record upon instructor assignment and may not be changed except as specifically provided by University procedures. Corrections of grade-point averages automatically are authorized when grade reports are corrected by instructors and when specific courses are deleted from grade-point averages under provisions of University regulations governing repeated courses and course deletions.

Changes of grades other than the filing of grades for incomplete courses require the endorsement of the appropriate college dean. Grade changes may not be made on a student's permanent record after the deadlines cited in the academic calendar unless such changes have been authorized by
appropriate college deans.

Course Grade Appeal Policy

The instructor of the class is the primary authority with respect to a student's proficiency and final grade in that course. A student who believes that his or her final grade reflects an erroneous, capricious, arbitrary, or prejudiced academic evaluation may appeal the grade. The academic judgment used in determining the merits of the grade to be awarded shall not be reviewable. This process does not apply to cases of academic dishonesty, which are adjudicated through the academic dishonesty process.

1. The student may file an appeal of his or her complaint, in writing, to the instructor within 30 days after a final grade is posted to the student's record. The instructor must respond within 14 days of receiving the appeal.

2. If the student remains dissatisfied by the decision of the instructor under step (1), he or she may, within 14 days after formal receipt of the instructor's final decision, appeal, in writing, to the chairperson of the program (or the Dean of the College if the instructor is the chairperson) in which the course or other exercise or activity is offered. The chairperson must respond within 14 days of receiving the appeal. The decision may be: (a) that the appeal be dismissed; (b) if there is demonstrable evidence of an erroneous, arbitrary, capricious, or prejudiced academic evaluation, then the chairperson will recommend appropriate remedies that a grade be changed or the student be allowed an opportunity to retake an examination or other exercise; or (c) that another appropriate remedy be administered.

5. The decision of the Dean is final and not subject to additional appeal by either student or instructor. The appeals process ends at this step.

6. Department chairs are responsible for keeping a record of the appeal on file in the department until the student is no longer a student.

Withdrawal from University

All students who desire to withdraw from the university are required to:

1. discharge all financial obligations to the university,
2. return all university property, and
3. fill out and file the electronic withdrawal form [https://na2.docusign.net/Member/PowerFormSigning.aspx?PowerFormId=a7294bd-3d17-476f-8ed8-ae38f8435d1c]. The date of official withdrawal determines tuition refund and legal or student insurance claims.

Students who stop attending classes without officially withdrawing from the university will remain on class rosters until they officially withdraw from the university or until the end of the semester. Students who remain on class rosters after the fiftieth class day will be assigned final course grades. Instructors are required to submit a last known date of attendance or academic activity for students who receive a grade of F or other non-passing grades. Students who cease attending without officially withdrawing may affect their Financial Aid. Please see: Withdrawal may affect Title IV Financial Aid awarded to you [https://www.uml.edu/thesolutioncenter/financial-aid/Maintaining-Aid/withdrawal.aspx].

In most cases, the date on which a withdrawal request is filed with the Office of the Registrar is the date on which withdrawal is effective.

Students who are recipients of benefits from the Veterans
Administration may not process withdrawals from the university that violate their declarations of classroom attendance. Recipients of veterans benefits are advised that they must receive course grades when their requests to withdraw from the university have been filed after deadlines of the Veterans Administration for processing changes of declared benefit status or when their dates of withdrawal will conflict with declarations of classroom attendance.

University Withdrawal before Deadline-to-Withdraw specified on Academic Calendar

Students who register for courses and withdraw from the university prior to the first day of classes of a semester are withdrawn without record. Students who register for courses and who withdraw from the university before the deadline-to-withdraw specified on the academic calendar are withdrawn with course notations of W.

University Withdrawal After the Deadline-to-Withdraw specified on the Academic Calendar

A student who withdraws from the university after the deadline-to-withdraw specified on the academic calendar and prior to the end of the term will be graded with a greater penalty grade (F grade). The university withdrawal effective date will be the date the Withdrawal from University Form is received.

A student who wishes to withdraw from the university after the deadline-to-withdraw specified on the academic calendar must file an academic petition, together with appropriate documentation specifying the cause for the withdraw, with the Office of the Provost. Following a review of the academic petition and verification of attached documentation, the Office of the Provost may permit the student to withdraw from all courses with course notations of X.

Withdrawal from courses may have implications for degree progress, veterans benefits, health insurance, financial aid, and immigration status. Students are advised to consult their academic advisor as well as officials in appropriate offices prior to withdrawing from class. Instructors are required to submit a last known date of attendance or academic activity for students who receive a grade of F or other non-passing grades. Students who cease attending without officially withdrawing may affect their Financial Aid.

University Withdrawal After the End of the Semester

A student who has unofficially withdrawn from the university (i.e., has ceased attending classes) for reasons of extended illness or critical personal emergency and was unable to officially withdraw from the university before the end of the semester may petition to withdraw from all courses with course notations of X. Such a student must file an academic petition, together with supporting documentation, no later than one calendar month from the beginning of the following semester. This petition must be filed with the Office of the Provost. Following a review of the academic petition and verification of attached documentation, the Office of the Provost will notify the student and the Office of the Registrar of the decision. Faculty are notified when the grade of X is retroactively applied to a course for which a grade was entered.

Readmission

Students who have withdrawn from the university may apply for re-admission through the Office of the Registrar. The form for re-admission may be found on The Solution Center website (https://www.uml.edu/thesolutioncenter/Forms/Academic-Forms.aspx).
College of Engineering

Degree Pathways are a semester-by-semester sequence of courses recommended for successful completion of a degree, diploma, credential or certificate from the University. Students should follow the degree pathway appropriate to their catalog year. A student's catalog year is typically defined by the date of their entry into the University of Massachusetts Lowell.

Biomedical Engineering

- fall 2019 and beyond
- fall 2017 - spring 2019
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
- fall 2016 - spring 2017
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

Chemical Engineering

- General Option fall 2020 and beyond
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
- Biological Engineering Option fall 2020 and beyond
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
- Nanomaterials Engineering Option fall 2020 and beyond
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
- Nuclear Engineering Option fall 2020 and beyond
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

Civil Engineering

- fall 2018 and beyond
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
- fall 2015 - spring 2018
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

Computer Engineering

- fall 2015 and beyond

Electrical Engineering

- fall 2015 and beyond

Environmental Engineering

- fall 2018 and beyond
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

Double Major in Electrical Engineering/Computer Science

- fall 2017 and beyond
- prior to fall 2015
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

Double Major in Electrical Engineering/Physics

- fall 2017 and beyond
- fall 2014 - spring 2015
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

Industrial Engineering

- fall 2020 and beyond

Mechanical Engineering

- fall 2022 and beyond
- fall 2015 - spring 2022

Plastics Engineering

- fall 2018 and beyond
  (https://www.uml.edu/resources/catalog-
archive/current/Undergraduate.pdf)

- fall 2015 - spring 2018

**Total Minimum Credits = 124**

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the [Core Curriculum](https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) policy for further details. You should meet with your faculty advisor to determine how you will meet the Core Curriculum requirements.

Current UMass Lowell students should use their Advisement Report in SIS [here](http://www.uml.edu/enrollment/sis/default.aspx). If you need assistance, please contact your advisor.

**Restriction on off-campus study:**

Be advised that any course taken at another institution must be [formally approved](https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the [catalog policy](https://www.uml.edu/resources/catalog-).
archive/current/Undergraduate.pdf)

for details.

Last Updated: 7/19/2019
BMBT.4000 Introduction to Biomedical Engineering (Formerly IB 400) - Credits: 3

Provides exposure to cutting-edge biomedical technologies in a number of different areas with a balance between biomedical engineering and biotechnology areas.

BMEN.1020 Biomedical Engineering Seminar - Credits: 1

This course provides undergraduate students in Biomedical Engineering the opportunity to expand their knowledge of Biomedical Engineering career opportunities and develop required skills. Content includes the development of professional skills (career opportunities, resume writing, etc) and an exploration of current research areas through presentations by faculty (and/or off-campus subject matter experts) and through literature review.

BMEN.1200 BME Application Programming - Credits: 3

Introduces programming logic for engineers. Covers fundamentals of procedural programming with applications in Biomedical Engineering and embedded systems. Topics include variables, expressions and statements, console input/output, modularization and functions, arrays, pointers and strings, algorithms, structures, and file input/output. Introduces working with Matlab. Laboratories include designing and programming engineering applications.

BMEN.2200 Bioinstrumentation - Credits: 3

This course introduces fundamental of instrumentation for biological applications. In this course we will explore sources of signals, detection of these signals, signals to noise, and data processing. We will learn how to analyze circuits including energy storage elements, op-amps, and filters.

BMEN.2205L Bioinstrumentation Lab - Credits: 2

This course is the laboratory section associate with Bioinstrumentation (BMEN.2200). The lab will learn how to build basic circuits to collect physiologically-relevant data and analyze the data using concepts from signal processing.

BMEN.3200 Quantitative Physiology - Credits: 3

This course provides an introduction to human physiology using a quantitative, systems oriented approach. Systems examined include: musculoskeletal; cardiovascular; respiratory; renal; gastrointestinal; and endocrine. Mathematical models, MATLAB simulation and engineering analyses are used to describe system performance where applicable.

BMEN.3205L Quantitative Physiology Lab - Credits: 2

Experiments involving the modeling and measurement of human physiology systems. Use of computer simulations to provide mathematical descriptions of physiological behavior. Calibration and validation of models through hands-on experiments. Focus on quantitative measurement of neural, cardiovascular, respiratory, muscular, and endocrine system functions.

BMEN.4035 Medical Device Design II - Credits: 3

This course builds on the work done in BMEN.4030, Medical Device Design I. The course focuses on moving one or more potential solutions to a medical need forward into technical development and preparing for commercialization. Students will learn the fundamentals of medical device prototyping; developing patent strategies; planning for reimbursement and regulatory approval; choosing a commercialization route (licensing, partnering, start-up); anticipating marketing, sales, and distribution needs; understanding financial modeling and cash requirement; fundraising; and identifying and managing risks.

BMEN.4040 Fundamentals of Medical Device Regulation - Credits: 3

A comprehensive and in-depth analysis of US medical device diagnostics development and approval requirements. Detailed analysis of quality assurance issues and regulatory reforms implemented under the Food and Drug Administration. Provides a step-by-step guide through the Center for Devices and Radiological Health (CDRH) investigation device exemptions, premarket approval, 510(k) application process and product development protocol and review process.

BMEN.4090 Biomedical Properties of Polymers - Credits: 3

The biomedical properties and structures of polymers determine their utilization in various biomedical applications such as medical devices, implants, drug delivery, and medical packaging. These biomedical properties include mechanical properties, physical properties, chemical properties, optical properties, electrical properties, melt flow properties, failure and fracture properties, viscoelastic properties, and chemical composition.

BMEN.4100 Biological Principles for Cellular and Tissue Engineering - Credits: 3

The course will introduce principles of cell biology and design underlying cell and tissue engineering decision-making. Students will learn how mechanical and chemical aspects of the extracellular environment influence cell functions including
viability, proliferation, differentiation, and protein expression, and how those aspects may be integrated and/or manipulated in vitro and in vivo using various material and chemical approaches. Additionally, students will be introduced to contemporary techniques used to assess engineered tissue response and integration via immunocyto-/histo-chemistry, secretomics, imaging, immunoassays, and sequencing modalities.

BMEN.4115 Advanced Tissue Engineering - Credits: 3

Tissue engineering research continues to attract the interest of researchers and the general public. Popular media outlets like the New York Times, Time, and Wired continue to engage a wide audience and foster excitement for the field as regenerative medicine inches toward becoming a clinical reality. This course will cover enabling technologies, and current applications of the tissue engineering field. The enabling technologies section will focus upon those strategies typically incorporated into tissue-engineered deices or utilized in their development, including advanced scaffolding techniques, bioreactors, and micro physiological systems. Finally, the applications section presents engineered tissues and organs that are currently under development for regenerative medicine applications.

BMEN.4130 Neural Engineering - Credits: 3

Neural Engineering represents the intersection between neuroscience and the technologies designed to measure and modulate the nervous system. This course will review the fundamental principles of cellular and systems neuroscience in the peripheral and central nervous systems, followed by surveys of cutting edge optical/electrical neural interfaces, in vivo/vitro synthetic model systems, prostheses, as well as ethical considerations in neuroscience/neural engineering.

BMEN.4300 Occupational Ergonomics - Credits: 3

Occupational ergonomics provides us with a scientific basis for designing the work environment to optimize the physical and mental interaction of workers with their work systems: machines, tools, co-workers, work methods, etc. This is a survey of the field, so we will cover a wide variety of topics: relevant principles of anatomy, physiology, and musculoskeletal function; design of the physical and psychosocial work environment to enhance worker health and safety, work scheduling to reduce fatigue, and mental workload (e.g., display of information) to reduce worker error. Wherever relevant we will incorporate basic approaches to hazard assessment, exposure limits or guidelines, and approaches to workplace design.

BMEN.4310 Biomechanics - Credits: 3

The course provides an overview of musculoskeletal anatomy, the mechanical properties and structural behavior of biological tissues, and biodynamics. Specific course topics will include structure and function relationships in tissues and organs; application of stress and strain analysis to biological tissues; analysis of forces in human function and movement; energy and power in human activity; introduction to modeling viscoelasticity of tissues.

BMEN.4315 Biomechanics II - Credits: 3

This course prepares students with the mathematical preliminaries and theoretical framework to analyze the mechanics of biological materials and human movement. The course will focus on methods to model biological tissues as non-linear, elastic, homogeneous, anisotropic, incompressible materials, and analyze human movement, including the impulse-momentum and work-energy principles, as well as gait analysis.

BMEN.4320 Biofluid Mechanics - Credits: 3

This course will introduce fundamental principles and mathematical/physical models for air and blood flow in the physiological systems. Their practical applications will be discussed, with an emphasis on modeling and the potential of flow studies for clinical research applications.

BMEN.4350 Respiratory Dynamics and Devices - Credits: 3

An aerosol is an assembly of particles suspended in a gaseous medium. They are omnipresent in our workplaces and outdoor environments. They include a wide range of phenomena such as dust, fume, smoke, mist, fog, haze, clouds, and smog. Certain aerosols pose significant health threats, while others improve the quality of our lives. It is necessary to understand how airborne particles behave to control against their undesirable effects and to harness their beneficial potential. This course will explore the mechanics of aerosol behavior, including their generation, transformation, and fate in occupational and environmental settings.

BMEN.4380 Computational Biomechanics - Credits: 3

Computational biomechanics is a powerful engineering method to model fluid-structure interaction in biological systems. While its traditional roots are in the realm of engineering, the techniques have found wide use in the biomedical engineering domain to simulate the biomechanical response and hemodynamics of the human body and medical devices. This course will prepare students with hands-on and practical skills using computational packages and software to solve biomechanical problems.

BMEN.4390 Computer Aided Engineering Design & Analysis - Credits: 3
This course introduces the student to the use of CAD for construction of basic shapes and multi-view drawings. It is a project-oriented course introducing the student to graphic design using SolidWorks. Design, analysis and visualization of engineering components and systems using interactive computer programs with an emphasis on computer simulation.

BMEN.4410 Biomedical Optics - Credits: 3
This course will introduce fundamental principles of the interactions between light and biological tissue, including their applications in biology and medicine for detection, imaging, and treatment.

BMEN.4810 Data Analytics & Biostatistics - Credits: 3
Data analysis is a major skill that is required to solve problems as well as to design and develop biotechnology solutions and medical devices. A bioengineer must not only apply the long standard general statistical methods in order to analyze data but also master some of the unique aspects involved in the analysis of biomedical datasets. This course will require the student to become proficient in MATLAB and the Statistics and Machine Learning Toolbox in order to achieve course learning objectives. The student will also be required to demonstrate their bioanalytical proficiency through the implementation of an individual project.

BMEN.4850 Applied Project Management and Mentorship in BME - Credits: 3
This course will cover successful strategies in project management and mentorship. Students in the course will serve as project managers (PM) and mentors to the students enrolled in BMEN.1070: Introduction to Biomedical Engineering. PMs will facilitate one to two groups in the completion of their semester long project in BMEM.1070. They will set deadlines, assess work, manage the project, and participate in weekly professional development meetings. We will discuss how to run successful meetings, to set achievable goals, and to optimize time and budget constraints in order to ensure successful completion of a BME related project. We will also explore career options as a project manager, learn about their job responsibilities, and learn essential tools commonly used by PMs in industry.

BMEN.4910 Biomedical Capstone I - Credits: 3
This is the first of a two course capstone sequence. This course provides an integrative design experience in engineering. Students work in teams and apply their engineering problem solving skills on open-ended, real-world biomedical projects. This course has an emphasis on team work, communication, report writing, oral presentations, project definition and project planning.

BMEN.4950 BME Selected Topics - Credits: 3
This course will provide an in-depth examination of a specific area of biomedical engineering. Specific topics will vary with the expertise of the instructor.

BMEN.4980 BME Research Experience I - Credits: 1-3
BME Research Experience I will provide biomedical engineering students with a mentored experience with a hands-on research project. Appropriate research experiences are those within biomedical engineering that allow the student opportunities to increase their skills, knowledge, and experiences in their academic/career goal areas. Students will work approximately 3 hours a week per credit on the designated research project. Regular meetings with the research mentor will also occur. Students are required to submit a significant status update or final project report to their mentor.

BMEN.4981 BME Research Experience II - Credits: 1-3
BME Research Experience II will provide biomedical engineering students with a mentored experience in a hands-on research project. The project is expected to be a continuation of the work begun in BME Research Experience I. Appropriate research experiences are those within biomedical engineering that allow the student opportunities to increase their skills, knowledge, and experiences in their academic/career goal areas. Students will work approximately 3 hours a week per credit on the designated research project. Regular meetings with the research mentor will also occur. Students are required to give a departmental seminar on their research project.
Degree Pathways

Degree Pathways are a semester-by-semester sequence of courses recommended for successful completion of a degree, diploma, credential or certificate from the university.

Chemical Engineering

- General Option fall 2020 and beyond
- Biological Engineering Option fall 2020 and beyond
- Nuclear Engineering Option fall 2020 and beyond
- Nanomaterials Engineering Option fall 2020 and beyond
CHEN.1010 Technology and Human Built World (Formerly 10.101) - Credits: 3
This course provides a hands-on introduction to chemical engineering and the skills, both technical and non-technical, that will be required to complete the undergraduate degree program. Through both assignments and projects, students learn to: identify a problem, develop alternative solutions, make critical decisions, and work as a member of a team. Technical skills that are introduced in this course include a basic introduction to linear algebra and descriptive statistics, basic technical communication through report writing, and computer programming basics using EXCEL/VBA.

CHEN.1070 Introduction to Chemical Engineering (Formerly 10.107) - Credits: 2
This course provides a hands-on introduction to chemical engineering and the skills, both technical and non-technical, that will be required to complete the undergraduate degree program. Through both assignments and projects, students learn to: identify a problem, develop alternative solutions, make critical decisions, and work as a member of a team. Technical skills that are introduced in this course include a basic introduction to linear algebra and descriptive statistics, basic technical communication through report writing, and computer programming basics using EXCEL/VBA.

CHEN.2010 Basic Principles of Chemical Engineering (Formerly 10.201) - Credits: 3
An introductory course that prepares students to solve material and energy balances on chemical process systems and lays the foundation for subsequent courses in thermodynamics, unit operations transport phenomena, reaction engineering and process dynamics and control.

CHEN.2020 Chemical Engineering Thermodynamics (Formerly 10.202) - Credits: 3
The course introduces fundamental thermodynamic principles presented from a chemical engineering perspective. The first and second law of thermodynamics, PV relationships for real and ideal fluids and methods for calculating enthalpy and entropy data, ad heat and work requirements for industrial chemical processes will be determined using mass, energy and entropy balances. Fundamental thermodynamic principles are used to examine applications involving processes with and without chemical reaction, common heat engines, flow processes and refrigeration cycles.

CHEN.2050 Fundamentals of Electricity (Formerly 10.205) - Credits: 3
An introduction to direct current and alternating current of electric circuits with emphasis on practical application.

CHEN.3030 Fluid Mechanics (Formerly 10.303) - Credits: 3
This course introduces the student to several fundamental concepts and applications of fluid mechanics. It overviews the basic properties of fluids, the study of fluid statics and fluid flow systems, and the development and application of the appropriate mass, momentum, and energy balance relationships needed to solve a variety of practical problems, with a particular focus on the macroscopic view. Emphasis is on the ability to apply the basic principles to the design and analysis of engineering systems involving applications in hydrostatics, internal, open-channel, and external flows, pump selection, flow measurement, etc. The course also focuses on proper problem solving strategy and on the correct use of units in engineering analysis.

CHEN.3040 Heat Transfer and Unit Operations (Formerly 10.304) - Credits: 3
The course provides an understanding of essential unit operations in chemical engineering practice. The design and operation of equipment for fluid flow (pumps, compressors) and heat transfer (heat exchanges, cooling towers, evaporators, boilers, condensers) as well as other fundamental operations and phase separation equipment (mixers/agitators, filters, settling tanks, and others) and discussed. The fundamental connections to heat transfer principles as well as fluid flow and mass transfer are considered. The analysis, design and operating characteristics of unit operations are illustrated through the solution of homework problems.

CHEN.3060 Transport Phenomena (Formerly 10.306) - Credits: 3
Introduction to the theory of the transport processes. Integral and differential approaches are used to develop the macroscopic and microscopic forms of the conservation laws. The conservation laws are used to solve practical problems in the chemical and nuclear industry.

CHEN.3080 Introduction to Material Science and Engineering (Formerly 10.308) - Credits: 3
A general overview of solid materials which are likely to be considered for engineering applications in, or be produced by the chemical process industries. They will be discussed from the viewpoints of their units structures, appropriate phase diagrams, their chemical and physical attributes, and the association of these to end use applications. Discussion of metals, ceramics, polymers, and to a limited degree, composites.

CHEN.3100 Separation Processes (Formerly 10.310) - Credits: 3
This course is an introduction to separation processes based on mass transfer principles and equilibrium staging. Separation processes including distillation, absorption, liquid-liquid extraction, membrane/filtration, adsorption and settling base separations are introduced and examined. Unifying fundamental relations and concepts are emphasized along with
practical applications for industrial processes.

**CHEN.3110 Phase and Chemical Reaction Equilibria**  
(Formerly 10.311) - Credits: 3

This course is a continuation of CHEN.2020 Chemical Engineering Thermodynamics and develops capacity to apply thermodynamic principles towards the solution of practical problems while maintaining the rigorous characteristics of thermodynamics analysis. The course extends the treatment of thermodynamic properties of pure fluids to the application of problems unique to chemical engineering involving vapor-liquid equilibrium, liquid-liquid and multiphase equilibrium, as well as the theory and application of solution thermodynamics and chemical reaction equilibria.

**CHEN.3150 Unit Operations Laboratory** (Formerly 10.315) - Credits: 3

Students perform laboratory base experimental analyses in fluid flow and heat transfer and fluid flow and heat transfer unit operations processes common in Chemical Engineering practice. The course is team based and students are expected to develop and improve in their ability to work and interact in a group environment. Written and oral reports are required. Safety in both lab and industrial practice are emphasized. Meets Core Curriculum Essential Learning Outcome for Quantitative Literacy (QL) and Written & Oral Communication (WOC).

**CHEN.3160 Unit Operations Laboratory II** (Formerly 10.316) - Credits: 2

Experimental projects treat heat and mass transfer, including staged operations, in a unit operations format. Process measurement and calibration emphasised. Written reports required.

**CHEN.3170 Applied Engineering Problem Solving**  
(Formerly 10.317) - Credits: 3

This course introduces a variety of applied numerical methods as a means for solving a wide range of engineering problems. Methods to address linear and nonlinear equations, curve fitting, numerical integration, ordinary differential equations, etc are studied, with emphasis on how to implement and apply these methods within standard computational environments (such as Matlab, Excel, etc.) to solve typical engineering problems. Good communication skills, effective application of the selected software tools, and proper problem-solving technique are stressed.

**CHEN.3470 Elements of Thermodynamics and Heat Transfer** (Formerly 10.347) - Credits: 3

**CHEN.4030 Chemical Reaction Engineering**  
(Formerly 10.403) - Credits: 3

Review of principles underlying rates of transformation of matter and energy; effect of temperature and catalysis on chemical reactions. Introduction to the basic ideas underlying chemical reaction engineering. May be taken for graduate credit.

**CHEN.4090 Engineering Economics and Process Analysis**  
(Formerly 10.409) - Credits: 3

This course brings together all the Chemical Engineering core principles applied to the development of economic process designs. Economic evaluations of manufacturing operations and projects including essential concepts in accounting, depreciation, time value of money, and the evaluation of investment alternatives are applied for process analysis and design objectives. The impact of management and production costs, product markets, regulatory, environmental and safe production practices, the analysis of corporate annual reports including balance sheets and income statements, and capital and operating costs are all considered in regard to efficient and economic processes. In addition to lecture materials students are required to complete comprehensive projects. Meets Core Curriculum Essential Learning Outcome for Applied & Integrative Learning (AIL), Critical Thinking & Problem Solving (CTPS) and Information Literacy (IL).

**CHEN.4100 Chemical Plant Design** (Formerly 10.410) - Credits: 3

This course is the logical continuation of CHEN.4090 (Formerly 10.409) The principles of technical and economic evaluation are applied to a chemical engineering problem. A group of students is given a statement of the problem. They are required to find information on raw materials, products, thermodynamic parameters and plant practices in order to develop the assumptions required to carry out an examination of technical and economic feasibility. Each group generates a final report for the problem. In addition to oral presentations, students are required to complete a comprehensive group design project. Meets Core Curriculum Essential Learning Outcome for Applied & Integrative Learning (AIL), Critical Thinking & Problem Solving (CTPS) and Information Literacy (IL).
CHEN.4130 Process Dynamics & Control (Formerly 10.413) - Credits: 3

An introduction to chemical process control. Description of processes and equipment by differential equations and the Laplace transform. Development of block diagrams. System stability is studied by both root locus and frequency response methods. May be taken for graduate credit.

CHEN.4150 Process Operations and Controls Laboratory (Formerly 10.415) - Credits: 3

Experimental projects dealing with heat transfer, mass transfer, separations processes, chemical reaction engineering, process dynamics, and process control. Written and oral reports required.

CHEN.4190 Special Senior Projects (Formerly 10.419) - Credits: 3

Original research projects primarily in the chemical engineering field and supervised by a staff member of the department. Written reports required.

CHEN.4200 Special Senior Projects (Formerly 10.420) - Credits: 3

Original research projects primarily in the chemical engineering field and supervised by a staff member of the department. Written reports required.

CHEN.4500 Nanoscale Trans. Phenomena for Manuf. Nanodevices (Formerly 10/22/26.450) - Credits: 3

An interdisciplinary course taught by faculty from the Chemical, Mechanical and Plastics Engineering Departments, who have special knowledge in nanoscale fluid mechanics and heat transfer. The course on nanoscale transport phenomena constitutes a bridge between existing fluid and heat transfer courses in multiple disciplines and emerging nanoscale science and engineering concepts to reflect the forefront of nanomanufacturing. The course is designed to incorporate recent advances in manufacturing polymer based nanodevices. Key issues of the implementation and maintenance costs for fabrication will be addressed. Hands-on laboratory experiments will be performed to complement the lectures with the ultimate goal of designing and building a complete nanodevice at the end of the course. The course will prepare graduates for employment focused on designing and manufacturing nano/microfluidic systems, lab on ship devices, electronic devices, medical devices and other emerging technologies.

CHEN.4910 Industrial Experience I (Formerly 10.491) - Credits: 0-12

Projects performed by students in the Cooperative Education Program at their place of employment and supervised by the employer and advisor from the department. Reports required upon completion of the project. “Variable credit course, student chooses appropriate amount of credits when registering.”

CHEN.4920 Industrial Experience II (Formerly 10.492) - Credits: 1-9

Projects performed by students in the Cooperative Education Program at their place of employment and supervised by the employer and advisor from the department. Reports required upon completion of the project.

CHEN.4930 Industrial Experience III (Formerly 10.493) - Credits: 1-9

Projects performed by students in the Cooperative Education Program at their place of employment and supervised by the employer and advisor from the department. Reports required upon completion of the project.

CHEN.4960 Selected Topics:Paper Engineering (Formerly 10.496) - Credits: 3

Topics in paper engineering. Content may vary from year to year to reflect contemporary applications of paper engineering.

ENGY.3310 Fundamentals of Nuclear Science and Engineering (Formerly 24/10.331) - Credits: 3

Overview a variety of fundamental nuclear science and engineering concepts that form the basis for most contemporary nuclear technology applications Course topics include concepts from basic atomic and nuclear physics, modern physics, nuclear models and nuclear stability considerations, basic nuclear reactions and the conservation laws that govern these interactions, various radioactive decay processed, and the interaction of neutrons and gamma rays with matter. The energy dependence of neutron and gamma cross sections, the slowing down process, the computation of microscopic and macroscopic reactions rates, and the characterization of different materials used in a variety of nuclear applications are also addressed. A variety of practical applications are highlighted.

ENGY.4190 Nuclear Reactor Operator Training (Formerly 24.419) - Credits: 3
This course provides an introductory overview of nuclear physics and related theory and the various systems associated with the operation of the UMass Lowell Nuclear Research Reactor (UMLRR). The course is intended for students who want to learn about the operations of the UMLRR and who are interested in a career in nuclear engineering and science. The course provides a multidisciplinary systems approach to education and training, which emphasizes “learning by doing”. In a practical setting, students study and learn basic nuclear theory and design aspects of real-world systems associated with nuclear reactor operations. Knowledge is gained by working closely with experienced reactor operators and staff, and through independent study.

ENGY.4200 Nuclear Reactor Operator Training II
(Formerly 24.420) - Credits: 3

Continuation of 24.419. Upon completion of this course, the student will be given a simulated Reactor Operator examination, including a written test, an oral test about reactor systems, and a controls manipulation test.

ENGY.4340 Nuclear Reactor Theory (Formerly 10/24/434) - Credits: 3

Emphasis is placed on neutron interactions in various nuclear core and shield configurations along with the development, solution, and analysis of the neutron balance equation for various situations. Several aspects of nuclear reactor core physics including neutron diffusion, criticality, power production, reactor kinetics, reactivity feedback and control, fuel depletion, fission product poisoning, and some energy removal considerations are treated. General reactor core design and safety considerations are also discussed.

ENGY.4350 Nuclear Reactor Engineering - Credits: 3

This course provides an overview of pertinent topics in basic nuclear heat generation and removal in a nuclear reactor, power conversion, and overall system integration and safety.

ENGY.4390 Nuclear Systems Design & Analysis
(Formerly 24.432 & ENGY.4320) - Credits: 3

A design course that focuses on the use of modern computer analysis tools for the design and analysis of nuclear systems. Reactor physics and shielding codes and thermal and transient analysis of nuclear systems are completed by small design teams with individual responsibility for a particular aspect of the design. Oral and written communication skills are emphasized. (10.432 and 24.432 are the same)

ENGY.4910 Industrial Experience (Formerly 24.491) - Credits: 0-12

"Variable credit course, student chooses appropriate amount of credits when registering."

ENGY.4950 Directed Studies (Formerly 24.495) - Credits: 3

Special problems in nuclear science and engineering assigned to the individual student, with emphasis on modern research methods and preparation of results for publication.
Educational Objectives and Learning Outcomes

The Program Goal of the Civil and Environmental Engineering (CEE) Department is to provide its students with a well-balanced, high quality education in four areas of Civil Engineering practice: environmental, geotechnical, structural and transportation engineering that will:

- permit them to practice civil engineering at a professional level
- prepare them for graduate study
- promote life-long learning and continuing professional development
- provide them with the skills and knowledge necessary to develop into active contributors to the economic and social vitality of the region

To accomplish this Program Goal, the CEE Departments Program Educational Objectives (PEOs) are as follows:

- Graduates, who wish to pursue professional employment, will obtain a position in Civil Engineering or related engineering field, and will be successful in that position.
- Graduates will pursue lifelong learning, professional development, and registration as appropriate for their employers.
- Graduates will engage in service activities related to their profession.

The student outcomes for the BSE degree in electrical or civil engineering at UMass Lowell are as follows: At graduation students should possess:

- An ability to apply knowledge of mathematics, science, and engineering
- An ability to design and conduct experiments, as well as to analyze and interpret data
- An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- An ability to function on multidisciplinary teams
- An ability to identify, formulate, and solve engineering problems
- An understanding of professional and ethical responsibility
- An ability to communicate effectively
- The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
- A recognition of the need for, and an ability to engage in life-long learning
- A knowledge of contemporary issues
- An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

Degree Pathways

Degree Pathways are a semester-by-semester sequence of courses recommended for successful completion of a degree, diploma, credential or certificate from the university.

Environmental Engineering

- fall 2018 and beyond
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

Civil Engineering

- fall 2018 and beyond
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
- fall 2015 - spring 2018
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
CIVE.1070 Introduction to Engineering for Civil and Environmental (Formerly 25.107/14.107) - Credits: 2

This course provides an introduction to the elements of computer aided design using AutoCAD. Through assignments and projects, students learn various AutoCAD principles, i.e., graphic entities, hatch patterns, layering, and dimensioning, with special emphasis on completing a design project. Two-dimensional drafting and three-dimensional modeling and surface revolution are also discussed. This course is intended for freshmen in civil and environmental engineering majors.

CIVE.2250 Surveying I (Formerly 14.225) - Credits: 3

A presentation of the basic instruments used in survey processes including distance, angle and level measurements. Analysis and adjustment of random errors. Principles of closed and open traverses. Fieldwork practice in instrument use and office-type projects in contour mapping and the application of contoured topography to highway and water-control projects.

CIVE.2260 Geomatics (Formerly 14.226) - Credits: 3

Principles and practice of route surveys and designs. Topics include simple and compound circular curves, intersections of straight and curved baselines, vertical alignment principles including parabolic easement curves, earthwork operations and determination of volumes. Includes office-type projects illustrative of the application of surveying information to Civil Engineering projects such as water resources, sanitary sewers and property subdivision. Fieldwork instruction in basic traverse surveys, gathering of topographic information, and the staking-out of buildings and circular curves.

CIVE.2860 Probability and Statistics for Engineers (Formerly 14.286) - Credits: 3

Probability, statistics, reliability and decision with applications in engineering. Probability of events, discrete and continuous random variables, probability density functions and distributions, estimation, regression and correlation techniques, risk and reliability concepts.

CIVE.3010 Fluid Mechanics (Formerly 14.301) - Credits: 3

Fluid properties, fluid statics, fluid dynamics including continuity, impulse-momentum and energy equations. Pipe flow, turbomachinery, similitude and modeling, laminar and turbulent flow, boundary layer and closed conduct design.

CIVE.3110 Engineering Materials Laboratory (Formerly 14.311) - Credits: 1

Experiments and written reports. Testing and measurement techniques and material standards illustrating behavior of materials, including metals, wood, and Portland cement concrete.

CIVE.3300 Soil Mechanics (Formerly 14.330) - Credits: 3

Development of the fundamental principles of soil mechanics as utilized in soil and foundation engineering. Topics include: classification, index properties, strength and stress-strain behavior, effective stress principle, permeability, flow and consolidation. Introduction to basic soil mechanics laboratory practice.

CIVE.3320 Environmental Engineering Laboratory (Formerly 14.332) - Credits: 1

Laboratory experiments to illustrate analysis of environmental samples and experimental techniques, normally used in support of water and wastewater treatment facilities. Course emphasizes data acquisition and analysis, and engineering report writing.

CIVE.3330 Geotechnical Laboratory (Formerly 14.333) - Credits: 1

Laboratory experience that illustrates soil mechanics and fluid flow theory. Experiments are conducted in the soils and hydraulics laboratories. Course emphasizes data acquisition and analysis and writing engineering reports.

CIVE.3400 Transportation Engineering (Formerly 14.340) - Credits: 3

Development of the basic principles pertaining to the movement of people and goods by modern transportation systems. Techno-economic characteristics of the various transportation modes. Aspects of planning, design and operation of land, air and water transportation facilities. Development, structure and function of the U.S. transportation system.
CIVE.3410 Transportation Engineering Laboratory (Formerly 14.341) - Credits: 1
Practice techniques of data collection, analysis and presentation that are commonly used in the planning, design and operation of transportation facilities with primary emphasis on highway systems.

CIVE.3500 Structural Analysis I (Formerly 14.350) - Credits: 3
Principles of structural analysis applied to typical civil engineering structures as the initial step in the total design concept. Emphasis on classical methods of analysis of statically determinate and indeterminate structures. The personal computer as an analytical tool.

CIVE.3520 Reinforced Concrete (Formerly 14.352) - Credits: 3
Ultimate strength and elastic behavior of reinforced concrete structural members, continuity in building frames, deflections, shear reinforcement, development length and bar cutoffs, columns and footings.

CIVE.3620 Environmental Engineering (Formerly 14.362) - Credits: 3
Physical, chemical and biological principles of the treatment of water and wastewater are considered along with their application to treatment systems. The system components of wastewater and water treatment plants are studied to provide a basic design capability. Hazardous waste site remediation is also discussed.

CIVE.3720 Civil Engineering Systems (Formerly 14.372) - Credits: 3
Introduction to methods of operations research, management science and economic analysis used in the design, planning and managing of engineering systems. Main topics covered: systems modeling, optimization concepts, network analysis, mathematical programming, critical path analysis, decision analysis, economic consideration.

CIVE.4310 Foundation and Soil Engineering (Formerly 14.431) - Credits: 3
The application of soil mechanics to the design and analysis of foundations and soil structures. Topics include: soil origin and deposition, subsurface exploration, bearing capacity and settlement analyses, design of shallow foundations, earth pressures, retaining structures, and slope stability.

CIVE.4520 Steel Design (Formerly 14.452) - Credits: 3
An introduction to structural steel design with emphasis on use and interpretation of the AISC Manual and LRFD Specifications. Subjects include design of tension, compression, beams, and beam-column members, plus bolted and welded connections. Other topics may include composite beams, plate girders, building connections and plastic analysis and design.

CIVE.4600 Water Resources Engineering (Formerly 14.460) - Credits: 3
This course is a continuation and extension of Fluid Mechanics, with a focus on engineering applications of hydraulic and hydrologic engineering. This course covers fundamental concepts of open-channel flow, hydraulic structures, design of open channels, surface-water hydrology, and groundwater hydrology.

CIVE.4660 Introduction to LEED (Formerly 14.466) - Credits: 3
This course examines the principles of sustainability and how they are applied to engineering and the built environment. Areas covered include energy, water, materials, transportation, and green building principles. Issues of evaluation of sustainability, including life cycle analysis and rating systems, are also discussed. This course fulfills the educational requirements for eligibility to take the LEED (Leadership in Energy and Environmental Design) Green Associate exam.

CIVE.4700 Engineering Economics (Formerly 14.470) - Credits: 3
Presentation of mathematical principles of economic analysis, with emphasis on defining alternatives and predicting consequences of proposed investments. Emphasis is placed on the economic, social and environmental impacts of proposed Civil Engineering projects. The attractiveness of investments is judged by present worth, annual worth, rate of return, and benefit-cost ratio techniques. Sensitivity analysis, depreciation and tax impacts in economic studies are also discussed.

CIVE.4750 Construction Management I (Formerly 14.475) - Credits: 3
Development of management skills and techniques to plan, schedule, supervise, and control construction projects. Project estimating; labor costs and productivity; construction plans, specifications and contracts; labor relations; time, cost and quality control; construction equipment and project decision making and financing.
CIVE.4800 Special Topics in Civil Engineering (Formerly 14.480) - Credits: 3
Contemporary topics in selected areas of study within civil engineering. Course content is chosen by the instructor to meet the interests of the students.

CIVE.4810 Special Topics (Formerly 14.481) - Credits: 3
Contemporary topics in selected areas of study within civil engineering. Course content is chosen by the instructor to meet the interests of the students.

CIVE.4830 Spec Topics: Civil Engineering (Formerly 14.483) - Credits: 3
Contemporary topics in selected areas of study within civil engineering. Course content is chosen by the instructor to meet the interests of the students.

CIVE.4850 Capstone Design (Formerly 14.485) - Credits: 3
Introduction to the essentials of engineering design and a forum for practicing the design process. Integrates many elements of the curriculum through a comprehensive design project to professional standards. Projects include the use of open-ended problems, feasibility analysis, complete design process, consideration of alternative solutions, and cost estimation. Students practice team effort, development of a system perspective, communication skills, reporting, and presentations.

CIVE.4910 Industrial Experience I (Formerly 14.491) - Credits: 0-12
The new Cooperative Education program for undergraduates combines academic studies with work experience in appropriate positions in the public or private sectors. It permits students to participate in the flexible schedule of study and work that is related to their academic fields of study and to receive academic credit for the work experience. Requires 500 hours of cooperative education engineering experiences, on a full-time or part-time basis, during any academic semester or summer. All co-op work must be pre-approved by the Co-op Coordinator. (Effective with Class of 2001-02, students in CEE are able to earn three credits after the successful completion of both Industrial Experience I and II). "Variable credit course, student chooses appropriate amount of credits when registering."

CIVE.4920 Industrial Experience II (Formerly 14.492) - Credits: 3
The new Cooperative Education program for undergraduates combines academic studies with work experience in appropriate positions in the public or private sectors. It permits students to participate in the flexible schedule of study and work that is related to their academic fields of study and to receive academic credit for the work experience. Requires 500 hours of cooperative education engineering experiences, on a full-time or part-time basis, during any academic semester or summer. All co-op work must be pre-approved by the Co-op Coordinator. (Effective with Class of 2001-02, students in CEE are able to earn three credits after the successful completion of both Industrial Experience I and II).

CIVE.4930 Industrial Experience III (Formerly 14.493) - Credits: 3
ENVE.2010 Environmental Engineering Chemistry - Credits: 3
Overview of fundamental chemistry related to the source, fate and reactivity of compounds in the atmosphere, hydrosphere, and lithosphere. Topics include reaction kinetics, chemical equilibrium, redox reactions, chemical thermodynamics, carbonate systems, environmental fate of chemicals in natural and polluted environments, anthropogenic and natural pollution.

ENVE.3020 Fluid Mechanics Laboratory - Credits: 1
Laboratory and field experiments on fluid mechanics including measurement of fluid properties, analysis of fluid flow patterns and fluid flow in closed conduits, and flow measurements. Course emphasizes data acquisition and analysis, and report writing.

ENVE.3105 Material Science for Environmental Engineering - Credits: 2
A treatment of the properties of engineering materials that influence the design, construction and maintenance of Civil Engineering works. Included are such materials as ferrous and non-ferrous metals.

ENVE.3630 Environmental Engineering II - Credits: 3
This course emphasizes the ecology and physical-chemical processes used in water and wastewater treatment. Topics covered include Streeter-Phelps model, coagulation, flocculation, water softening, precipitation, filtration, activated carbon adsorption, and disinfection.

ENVE.3640 Energy and the Sustainable Environment -
Credits: 3
Thermodynamic laws, energy balance, conservation of energy, heat transfer, energy conversion and efficiency, ideal and non-ideal gas and gas mixtures, design and evaluation of renewable energy systems.

ENVE.3650 Groundwater Hydrogeology and Remediation - Credits: 3
Groundwater flow and aquifer behavior in response to pumping will be addressed. Analysis of contaminant transport and the formation of multi-dimensional contaminant plume formation will be conducted. Physical, chemical and biological based technologies for contaminated aquifer remediation are covered.

ENVE.3660 Biological Processes in Environmental Engineering - Credits: 3
This course focuses on the fundamental aspects of biological processes that are commonly used in water and wastewater treatment. Topics covered include: the mechanisms and kinetics of biological reactions, mass balances of biological reactors, biological reactor design and diagnosis, and aeration and gas transfer.

ENVE.4610 Chemical Fate and Transport in the Environment - Credits: 3
The properties of organic chemicals and equilibrium chemistry controlling the distribution of these chemicals between air, water and soil will be studied. Transport processes and the lifetime of chemicals in the environment will be investigated. Risk assessment for the exposure to chemical contaminants will be addressed.

ENVE.4620 Air Quality - Credits: 3
Review of gaseous pollutants, their chemistry and properties. Emissions of air pollutants (mass balances) and atmospheric sciences related to air pollution. Gas and particulate handling and treatment technologies are addressed.

ENVE.4630 Environmental Eng. Ethics and Professional Practice - Credits: 3
This course introduces students to the American Society of Civil Engineers (ASCE) code of ethics and standards of practice for environmental professionals. Topics include codes of ethics, agreements and contracts, ethical and legal considerations, professional liability, public protection issues, environmental regulations, and environmental sustainability considerations. It prepares students to think critically while working with complex environmental issues.

ENVE.4640 Solid Waste Engineering and Management - Credits: 3
Generation, storage, collection, transfer and transport, processing and disposal of municipal solid wastes; treatment and disposal of water and wastewater treatment sludge; landfill design; alternative waste management and disposal strategies.

ENVE.4855 Capstone Design - Credits: 3
Introduction to the essentials of engineering design and a forum for practicing the design process. Integrates many elements of the curriculum through a comprehensive design project to professional standards. Project includes the use of open-ended design problems, feasibility and impact analysis, complete design process, consideration of alternative solutions, and cost estimation and scheduling. Students practice team effort, development of a system perspective, communication skills, reporting, and presentations. The course is fast paced and covers new design elements in each module.
ENGN.0010 Undeclared Engineering Seminar
(Formerly 25.001) - Credits: 0
The seminar course is designed to introduce undeclared engineering students to the various engineering disciplines so that undeclared engineering students can make a more informed decision when declaring their engineering major.

ENGN.1030 Environmental Biotechnology (Formerly 25.103) - Credits: 3
This UML TEAMS Academy course will investigate the chemical and biological impact of human activity on aquatic environments. A specific focus of this course will be to observe the behavior of microorganisms impacted by pollutants introduced into the environment by humans. Students will explore possible engineering solutions to alleviate the problems caused by pollutants. This course can be described as “inquiry based discovery” and will rely heavily on laboratory investigations and laboratory based projects analyzing environmental samples collected in the field. This course is open only to high school students accepted to the UML-TEAMS Academy. Instructor permission required.

ENGN.1070 Introduction To Engineering I (Formerly 25.107) - Credits: 2
This course provides a hands-on introduction to engineering and the engineering design process. Through assignments and projects, students learn how to: identify a problem, develop alternative solutions, select the best alternative, make critical decisions, and work as a team. The course is intended for freshmen in all engineering majors and provides an overview of the different engineering disciplines. Lecture and lab component.

ENGN.1080 Introduction To Engineering II (Formerly 25.108) - Credits: 2
This course is intended for first-year engineering students and provides an introduction to technical communications, teamwork and other skills. Topics vary depending on the department and include data analysis, computer-aided drafting/design/modeling program usage, report-writing and/or oral presentation. Depending on the department, software introduced may include Excel, PowerPoint, AutoCad, Matlab and/or MathCad. Team-based labs and projects may be employed. Students should enroll in the sections corresponding to their major or intended department to develop relevant skills.

ENGN.1300 Introduction to Nano-Engineering
(Formerly 25.130) - Credits: 3
The multi-billion dollar investment in nanoscience and nanotechnology is beginning to yield new products, including better sunscreens and wear-resistance materials. “Introduction to Nano-Engineering” is as overview of engineering at the nanoscale, including measurement techniques, nanoelectronics, nanomaterials, design of nanodevices, nanomanufacturing, and the societal impact of nanotechnology. “Lecture” material is accompanied by open-ended questions for chat-room discussion and five virtual laboratories. Targeted for the general public. This is an interdisciplinary course.

ENGN.1510 Assistive Technology & Electronics
(Formerly 25.151) - Credits: 3
UML-TEAMS Academy students will explore basic electronics physics in a hands-on laboratory environment. Students will apply their knowledge as they learn how to breadboard, test, and troubleshoot a series of lab projects. Students will use CAD tools as they learn how to fabricate printed circuit boards. The course culminates with groups projects that apply the engineering design process and electronics to design and build a product for disabled clients in our community. This course is open only to high school students accepted to the UML-TEAMS Academy. Instructor permission required.

ENGN.2000 Community-based Engineering Project I
(Formerly 25.200) - Credits: 1
Students work on multi-disciplinary teams and apply their engineering problem-solving skills on community-based design projects.

ENGN.2050 Statics (Formerly 14.203/22.211/25.211/25.205) - Credits: 3
The application of Newton’s Laws to engineering problems in statics. The free-body diagram method is emphasized. Topics include vector algebra, force, moment of force, couples, static equilibrium of rigid bodies, trusses, friction, properties of areas, shear and moment diagrams, flexible cables, screws, bearings, and belts.

ENGN.2060 Strength of Materials (Formerly 14.204/22.212/25.206) - Credits: 3
Stress and deformation analysis of bodies subjected to uniaxial loading, thermal strain, torsion of circular cross-sections, shear flow in thin-walled sections, bending of beams, and combined loading. Application of equilibrium, compatibility and load-deformation relations to solve statically determinate and indeterminate systems.

ENGN.2070 Dynamics (Formerly 14.205/22.213/25.207) - Credits: 3
Calculus based vector development of the dynamics of points, particles, systems of particles, and rigid bodies in planar motion; kinematics of points in rotating and non-rotating frames of reference in one, two, and three dimensions; conservation of momentum, and angular momentum; principle of work and energy.

ENGN.2100 Professional Development Seminar (Formerly 25.210) - Credits: 1

The Professional Development Seminar is designed to provide students with the necessary structure, resources, and support to successfully secure and engage in their first cooperative education experience. Through a variety of teaching methodologies and assignments, students will prepare to engage in the job search process through resume writing, strategic interviewing, professional networking and through learning professional behavior and presentation skills. Course open to undergraduates who have previously applied and been accepted to participate in the Professional Co-op Program. Enrollment is by Instructor permission only. For more information on applying to the Professional Co-op Program, see https://www.uml.edu/student-services/Career-Services/Cooperative-Education/Forms-Handbooks.aspx. Pre-Req: Permission of Instructor.

ENGN.2180 Introduction to Aerospace (Formerly MECH.2080) - Credits: 2

This survey course introduces and discusses: basic lightweight structures, aerospace materials, aerodynamics, air-breathing/rocket propulsion, space environment, energy systems, thermal analysis, aerospace systems design, and the aerospace industry (economics, jobs, opportunities, etc.). The hands-on laboratory component of this course requires students perform an aerospace system design in one of the following disciplinary areas (1) Aircraft design, manufacture and testing (2) Space system design, modeling and testing. The course has 2 hours of lecture and 2 hours of laboratory per week.

ENGN.2180L Introduction to Aerospace Lab (Formerly MECH.2080L) - Credits: 1

The introduction to Aerospace Laboratory is a hands-on exploration of the topics covered in the Introduction to Aerospace course. This laboratory course examines topics in: basic lightweight structures, aerospace materials, aerodynamics, air-breathing/rocket propulsion, space environment, energy systems, thermal analysis, aircraft design and space mission analysis and design. The laboratory course culminates in a required aerospace system design in one of the following disciplinary areas (1) Aircraft design, manufacture and testing (2) Space system design, modeling and testing.

ENGN.3000 Community-based Engineering Project II (Formerly 25.300) - Credits: 1

Students work on multi-disciplinary teams and apply their engineering problem-solving skills on community-based design projects.

ENGN.3100 Co-op assessment 1 (Formerly 25.310) - Credits: 1

The primary goal of this seminar is to assist students in the overall assessment of their overall cooperative education experience. Through facilitated small group discussion, individual consultation and hands on practice, students will have an opportunity to identify and articulate their technical and professional skills, and explore how these skills and their co-op employment might be translated and leveraged into future work environments and their academic program at UML.

ENGN.3200 Co-op Assessment I (6 months) - Credits: 2

This seminar is designed to support and assist students in the assessment of their 6 month cooperative education experience. Students will reflect of their extended time in a work environment, the impact of their experience on their planning, and how organizational culture, personal interests and values can inform their subsequent decisions for career development. Through facilitated small group discussions, individual consultation and hands on practice, students will have the opportunity to identify and articulate their technical and professional skills.

ENGN.4000 Community-based Engineering Project III (Formerly 25.400) - Credits: 1

Students work on multi-disciplinary teams and apply their engineering problem-solving skills on community based design projects. Completion of 25.400, 25.300, and 25.200 can count as a mechanical engineering technical elective (academic petition required).

ENGN.4010 Engineering Capstone Design Project (Formerly 25.401) - Credits: 3

Integrative design experience in engineering. Students work on multi-disciplinary teams and apply their engineering problem-solving skills on open-ended, real-world projects. Projects may be service-oriented in concept and teams may include members from other Departments and Colleges. Emphasis on communication, team-work, report-writing, oral presentations. This course may be used as a Technical elective for all Engineering Departments. Alternatively, this course may be used as a substitute for the culminating Capstone course in
ENGN.4017 Entrepreneurship Engineering Capstone Proposal - Credits: 3

Students will develop a new engineering product concept from both integrative design and new venture creation standpoints. Projects may include members from other departments and colleges. This course has an emphasis on entrepreneurship, team work, communication, report writing, oral presentations, project definition and project planning. This course may be used as a technical elective for all engineering departments. Alternatively, this course may be used as a substitute for the first capstone course in Electrical and Computer Engineering (EECE.3991) and Plastics Engineering (PLAS.4150). Students will then take their department’s culminating capstone course to complete their capstone course requirements.

ENGN.4019 Engineering Capstone Design Proposal - Credits: 3

This is the first of a two course capstone sequence. It provides an integrative design experience in engineering. Students work on multi-disciplinary teams and apply their engineering problem solving skills on open-ended, real-world projects. Projects may include members from other departments and colleges. This course has an emphasis on team work, communication, report writing, oral presentations, project definition and project planning. This course may be used as a technical elective for all engineering departments. Alternatively, this course may be used as a substitute for the first capstone course in Electrical and Computer Engineering (EECE.3991) and Plastics Engineering (PLAS.4150).

ENGN.4020 Engineering Capstone Design Project - Credits: 3

This is the second of a two course capstone sequence. This course provides an integrative design experience in engineering. Students work on multi-disciplinary teams and apply their engineering problem solving skills on open-ended, real-world projects. Projects may include members from other departments and colleges. This course has an emphasis on team work, Communication, report writing, oral presentations, design, analysis, test and fabrication. This course may be used as a substitute for the culminating capstone course in Electrical and Computer Engineering (EECE.4491), Plastics Engineering (PLAS.4160) and Mechanical Engineering (MECH.4230).

ENGN.4030 American Culture, Ethics and Communications in Engineering - Credits: 1

Overview of American culture and how it has been shaped by immigrants from the colonial era to the present and cultural influences from immigrants and their role in contributing to accomplishments in engineering, technology, science and the arts will be explored. Students will learn about the history of Lowell, MA in the context of key events. The concepts and practice of engineering ethics and the ethical principles and responsibilities that students should exercise in academia and professional careers will be introduced. The impact of engineering on society and the environment will be discussed through case studies. The course will promote communication skills through reading, listening and viewing assignments and responding with written reports and presentations to the class.

ENGN.4100 Co-op Assessment 2 (Formerly 25.410) - Credits: 1

This seminar is designed to support and assist students in the continued assessment of their cooperative education experience. Through a deepening of their work in Co-op Assessment 1, students will review their overall performance in the cooperative education program, while continuing to demonstrate their technical and professional skills through written work and public presentations to multiple audiences. It is expected that students will clearly define their future academic and career goals, enhance their professional networks, and develop a future plan to support aspirations related to their major.

ENGN.4200 Co-op Assessment 2 (6 months) - Credits: 2

This seminar is designed to support and assist students in the assessment of their second cooperative education work experience that was for a 6 month cycle. Students will reflect on their extended time in this second work environment, and how their two different co-op work experiences impacts their subsequent decisions for career development. Students will review their overall performance in the cooperative education program, while continuing assessment of their cooperative education experience. Through a deepening of their work in Co-op Assessment 1, students will review their overall performance in the cooperative education program, while continuing to demonstrate their technical and professional skills through written work and public presentations to multiple audiences.

ENGN.4500 Gas Turbine Engine Theory and Design - Credits: 3

This introductory course discusses the basics of open Brayton cycles for Gas Turbine Engines (GTEs) followed by a comprehensive review of the various GTE architectures (e.g., turbojet, turbofan, turboshift, turboprop, ramjets, etc.) for applications in both civil and military platforms. Detailed analyses of individual engine components (fan, LP/IP/LP compressors combustors, HP/IP/LP turbines, nozzles, etc.) as well as overall engine system interaction and integration. GTE design conceptualization, testing, validation & verification,
performance, emissions, and other parameters are examined with respect to overall design goal and intended operability and durability. Concluded by a broad review of popular airframe-engine models and their brief history of conceptualization and development.

ENGN.4900 Industrial Experience (Formerly 25.490)
- Credits: 0

ENGN.4910 Industrial Experience I (Formerly 25.491)
- Credits: 0-12

"Variable credit course, student chooses appropriate amount of credits when registering."
Educational Objectives and Learning Outcomes

Program Educational Objectives
are defined as the expected accomplishments of graduates of the program in first few years after graduation. Graduates of the BSE Computer or Electrical Engineering program at the University of Massachusetts at Lowell will be able to:

Be established and recognized as a valued professional and effective communicator in industries related to electrical, computer and electronic technologies.

Practice their profession in a collaborative, team-oriented manner that embraces the multidisciplinary and multicultural environment of today’s business world.

Engage in lifelong learning and professional development via post graduate education and participation in professional organizations.

Function as a responsible member of society with willingness to mentor fellow employees and an understanding of the ethical, social and economic impact of their work in a global context.

The student outcomes for the BSE degree in electrical or computer engineering at UMass Lowell are as follows. At graduation students should:

- A strong grounding in the fundamentals including the ability to formulate and solve engineering problems by applying the principles of mathematics, science and electrical & computer engineering.
- Ability to analyze and synthesize engineering problems including design and conduct experiments, use standard test equipment and interpret experimental data.
- Ability to design reliable systems, devices or processes from initial specifications to a deliverable system.
- Ability to work in a multidisciplinary team environment.
  - Ability to communicate effectively in both verbal and written forms.
  - Ability to appreciate the complexities of professional environments, including taking responsibility for oneself, working effectively and professionally as a team member, and being mindful of ethical, economic, and contemporary concerns.
- Competence in taking the initiative for one’s own professional development and recognition of the need and ability in engaging in post graduate education and lifelong continual learning.
- Ability to independently accomplish engineering tasks.
- Ability to enter industry with the engineering techniques, skills, and tools required to be able to solve real-world problems in electrical and computer engineering.

Degree Pathways

Degree Pathways are a semester-by-semester sequence of courses recommended for successful completion of a degree, diploma, credential or certificate from the university.

Electrical Engineering
- fall 2015 and beyond

Computer Engineering
- fall 2015 and beyond

Double Major in Electrical Engineering/Computer Science
- fall 2017 and beyond
- prior to fall 2015
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

Double Major in Electrical Engineering/Physics
- fall 2017 and beyond
- fall 2014 - spring 2015
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

Suggested Degree Pathway for Electrical Engineering

For students who entered fall 2015 and beyond.

### Total Minimum Credits = 121

2. A grade of C or better in Calculus II is required.

3. Technical electives are non-required courses numbered EECE.4xxx (https://www.uml.edu/catalog/courses/EECE) or EECE.5xxx (https://www.uml.edu/catalog/courses/EECE).

4. Electrical Engineering students meet the Core Curriculum Essential Learning Outcome of Diversity and Cultural Awareness (DCA) outside of the major. See the DCA course listing (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for a complete list of options.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the CoreCurriculum (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) policy for further details. You should meet with your faculty advisor to determine how you will meet the Core Curriculum requirements.

Current UMass Lowell students should use their Advisement Report in SIS (http://www.uml.edu/enrollment/isis/default.aspx). If you need assistance, please contact your adviser.

### Restriction on off-campus study:

Be advised that any course taken at another institution must be formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the catalog policy (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

**Total Minimum Credits = 138**

1Or MATH.1280 Calculus 1A and MATH.1290 Calculus 1B, followed by MATH.1320 Calculus II.

2A grade of C or better in Calculus II is required.

3PHYS.3380 Optics and Waves satisfies the prerequisite for PHYS.5390 Electro-Optics, a core course in the Optical Sciences option for the M.S. in Physics.

4EECE.5680 Electro-Optic Systems, also offered as EECE.4680, satisfies an elective course in the Optical Sciences option for the M.S. in Physics.

5Electrical Engineering & Physics students meet the Core Curriculum Essential Learning Outcome of Diversity and Cultural Awareness (DCA) outside of the major. See the DCA course listing for a complete list of options.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be
taken in any sequence. Refer to the Core Curriculum (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) policy for further details. You should meet with your faculty advisor to determine how you will meet the Core Curriculum requirements.

Current UMass Lowell students should use their Advisement Report in SIS (http://www.uml.edu/enrollment/isis/default.aspx). If you need assistance, please contact your advisor.

**Restriction on off-campus study:**

Be advised that any course taken at another institution must be formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the catalog policy (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

_Last Updated: 11/04/2021_
EECE.1070 Introduction to Electrical and Computer Engineering (Formerly 25/16.107) - Credits: 2

This course is divided into two parts in which students focus on core skills to help them thrive in electrical and computer engineering. The first half of the course focuses on application programming in Matlab where students learn basics of Programming, Digital Signal Processing, and Data Analysis. In the second part of the course students program a microcontroller and learn about the function of basic electronic components. Students learn to use basic test equipment such as an Oscilloscope, Function Generator, Volt Meter. This course is project and lab based.

EECE.1C0-OP Curricula Practical Training - Credits: 0-1

Curricula Practical Training. "Variable credit course, student chooses appropriate amount of credits when registering."

EECE.2010 Circuit Theory I (Formerly 16.201) - Credits: 3

This course covers ideal elements, active and passive. It introduces and applies Ohm’s Law and Kirchhoff’s Laws. Introduces concepts of network topology, independent and dependent variables, mesh and nodal analysis, the definition and consequences of linearity, source transformation, the superposition principle, Thevenin’s and Norton’s theorems, and maximum power transfer. Also covers ideal inductance and capacitance in simple circuits with the study of transient response and behavior under DC conditions.

EECE.2020 Circuit Theory II (Formerly 16.202) - Credits: 3

This course covers AC circuits under sinusoidal steady-state conditions using the concept of the frequency domain. Introduces the use of complex numbers, phasors, impedance and admittance for the application of circuit laws introduced in Circuit Theory I: Thevenin and Norton’s theorems, source transformation, superposition, maximum power transfer, nodal and mesh analysis. Covers power in the frequency domain, including RMS values, average power, reactive power, and apparent power. Introduction to magnetic coupling, mutual inductance, and the ideal transformer. Introduction to transfer functions, poles and zeroes in the s-plane.

EECE.2070 Basic Electrical Engineering Laboratory I (Formerly 16.207) - Credits: 2

Experimental work designed to verify theory and to acquaint students with electrical measurement techniques: experiments on meters, bridges, and oscilloscopes. Experiments are correlated with Circuit Theory I and concern: resistive measurements, Kirchhoff’s laws, network theorems, conservation of power and maximum power transfer, inductance and capacitance, and first and second-order transients, operational amplifiers. MATLAB will be utilized throughout the course.

EECE.2080 Basic Electrical Engineering Lab II (Formerly 16.208) - Credits: 2

Presents experimental work designed to emphasize electrical measurement techniques of linear systems with time-varying signals. Waveform measurements with DC and AC meters as well as advanced use of the oscilloscope are also discussed. Experiments are integrated with Circuit Theory II. Experiments cover: Kirchhoff’s laws for phasors, magnitude and phase measurements of impedance, network theorems, frequency response, resonance, inductance, maximum power transfer, and MATLAB techniques.

EECE.2110 Fundamentals of Electricity I (Formerly 16.211/213) - Credits: 3

This course serves as an introduction to direct current (DC) and alternating current (AC) analysis of electric circuits, with emphasis on energy and power. Covers the explanation of basic components (resistor, capacitor and inductor) and their use in electronics. Cover also the design and use of multi-range voltmeters, ammeters, and ohmmeters, series, parallel and series parallel circuits, the use of bridges, phasor analysis of AC circuits, transformers, relays, solenoids, etc. Different techniques like Superposition theorem, Thevenin equivalent circuit or Maximum Power will be presented. Students will also be introduced to DC and AC motors and generators, first and second order filters as well as basic sensors. Not for ECE students.

EECE.2140 Fundamentals of Sound Recording (Formerly 16.214) - Credits: 3

This course serves to instruct sound recording technology through the concepts of voltage, current, power, resistance and Ohm’s law; series, parallel and resonant circuits, Kirchhoff’s voltage and current laws; the Wheatstone bridge, Thevenin equivalent circuits and maximum power transfer theorem; magnetism, electromagnetism, electromagnetic devices, and transformers; a.c. current, RF signals, capacitors, and inductors; RC, RL, and RLC circuits; d.c. power sources; diodes, transistors, tubes (thermionic emission), and amplifiers. Use of voltmeters, ammeters, ohmmeters, and oscilloscopes are discussed and used in lab throughout the course. Not for ECE students.

EECE.2160 ECE Application Programming (Formerly
GRADUATE – ALL COLLEGES

UNDERGRADUATE / COLLEGE OF ENGINEERING

16.2650 Logic Design (Formerly 16.265) - Credits: 3

EECE.3110 Electronics I Lab (Formerly 16.311) - Credits: 2

Laboratory experiments coordinated with the subject matter of Electronics I. This lab explores the characteristics and use of electronic instrumentation for making measurements on electronic circuits. Labs will utilize the methods of designing and characterizing diode and transistor circuits. They will analyze the performance characteristics of digital and linear semiconductor circuits, including logic elements and amplifiers. The design and construction of circuits using monolithic op amps will also be explored.

EECE.3120 Electronics II Laboratory (Formerly 16.312) - Credits: 2

This course covers laboratory experiments coordinated with the subject matter of Electronics II. Study of high-frequency characteristics of transistors and transistor amplifiers. Covers feedback in electronic circuits, electronic oscillators and differential amplifier. Covers also the properties of linear IC operational amplifiers and their application in amplifier circuits and waveform generation circuits. Design and analysis of linear circuits.

EECE.3170 Microprocessors Systems Design I (Formerly 16.317) - Credits: 3

Introduction to microprocessors, Uses assembly language to develop a foundation on the hardware which executes a program. Memory and I/O interface design and programming. Design and operation of computer systems. Study of microprocessor and its basic support components, including detailed schematics, timing and functional analysis of their interactions. Laboratories directly related to microprocessor functions and its interfaces (e.g. memory subsystem, I/O devices and coprocessors).

EECE.3220 Data Structures (Formerly 16.322) - Credits: 3

Covers algorithms and their performance analysis, data structures, abstraction, and encapsulation. Introduces stacks, queues, linked lists, trees, heaps, priority queues, and hash tables, and their physical representation. Discusses efficient sorting (quicksort and heapsort) and experimental algorithm analysis. Examines several design issues, including selection of data structures based on operations to be optimized, algorithm encapsulation using classes and templates, and how and when to use recursion. Assignments include programming of data structures in an object-oriented language.
EECE.3550 Electromechanics (Formerly 16.355) - Credits: 3

Alternating current circuits, three phase circuits, basics of electromagnetic field theory, magnetic circuits, inductance, electromechanical energy conversion. Ideal transformer, iron-core transformer, voltage regulation, efficiency equivalent circuits, and three phase transformers. Induction machine construction, equivalent circuit, torque speed characteristics, and single phase motors. Synchronous machine construction, equivalent circuits, power relationships phasor diagrams, and synchronous motors. Direct current machines construction, types, efficiency, power flow diagram, and external characteristics.

EECE.3600 Engineering Electromagnetics I (Formerly 16.360) - Credits: 3

Electromagnetics I is the study of fundamental electrostatic and magnetostatic equations building up to the foundation of electrodynamics, Maxwell's Equations. This course is put into an engineering perspective by describing transmission line properties using circuit models and deriving these model parameters directly from Maxwell's Equations. To accomplish these tasks, Engineering Electromagnetics I implements: Transmission lines as Distributed Circuits, Smith Charts, impedance Matching, Electrostatics and Capacitance, steady current flow and Resistance, and Magnetostatics and Inductance.

EECE.3620 Signals and Systems I (Formerly 16.362) - Credits: 3

This course covers various continuous voltage/current time functions and their applications to linear time-invariant (LTI) electrical systems. It reviews pertinent topics from previous courses on circuit theory, such as system functions, S-plane concepts and complete responses. It introduces step and impulse functions and their responses in LTI circuits. It covers the solving of convolution integrals and differential equations, the transformation of signals to Fourier series, the Fourier and Laplace transforms, with their application, in continuous and discrete time, and Parseval's theorem. It also describes analog filter responses and design. A computing project is proposed in this course.

EECE.3630 Introduction to Probability and Random Processes (Formerly 16.363) - Credits: 3

Introduction to probability, random processes and basic statistical methods to address the random nature of signals and systems that engineers analyze, characterize and apply in their designs. It includes discrete and continuous random variables, their probability distributions and analytical and statistical methods for determining the mean, variance and higher order moments that characterize the random variable. Descriptive and inferential statistics, as well as time-varying random processes and their spectral analysis are introduced. The course provides the skills required to address modeling uncertainty in manufacturing and reliability analysis, noise characterization, and data analysis.

EECE.3640 Engineering Mathematics (Formerly 16.364) - Credits: 3

Complex number, Argand plane, derivatives of complex numbers, limits and continuity, derivative and Cauchy Riemann conditions, analytic functions, integration in the complex plane, Cauchy's integral formula, infinite series for complex variables. Taylor series, Laurent series, residue theory, evaluation of integrals around indented contours. Linear vector spaces, matrices and determinants, eigenvalues and eigenvectors.

EECE.3650 Electronics I (Formerly 16.365) - Credits: 3

A brief introduction to solid-state physics, leading to discussion of physical characteristics of p-n junction diodes, bipolar junction transistors, and field-effect transistors: active, saturated, and cutoff models of bipolar transistors and triode, constant current, and cutoff models of MOSFETs. Circuit models for diodes, and diode applications. Circuit models for transistors, and transistor applications in bipolar and MOS digital circuits and low-frequency amplifier circuits. Analysis of digital circuits and linear circuits based on application of circuit models of devices and circuit theory.

EECE.3660 Electronics II (Formerly 16.366) - Credits: 3

A continuation of 16.365 with discussion of differential amplifiers, operation amplifiers and op amp applications, transistor amplifiers at very high frequencies; direct-coupled and band pass amplifiers; small and large signal amplifiers; feedback amplifiers and oscillators. Active filters, wave form generation circuits including Schmitt trigger, multiplexers, and A/D and D/A converters. Circuit design employing integrated circuit operational amplifiers and discrete devices. Circuit analysis using SPICE. An electronic design project constitutes a major part of the course.

EECE.3991 Capstone Proposal (Formerly 16.399) - Credits: 3

This course is the first in a two semester capstone sequence. In a group, students will work with a client to define their project, by identifying the problem, objective and requirements, and engage in design, analysis, test and fabrication tasks as appropriate to meet the project goals. Project management
tools are discussed and applied in this process.

EECE.4030 Microwave Engineering (Formerly 16.403) - Credits: 3

An introductory course in the analysis and design of passive microwave circuits beginning with a review of time-varying electromagnetic field concepts and transmission lines. Smith Chart problems; single and double stub matching; impedance transformer design; maximally flat and Chebyshev transformers; microstrip transmission lines, slot lines, coplanar lines; rectangular and circular waveguides; waveguide windows and their use in impedance matching; design of directional couplers; features of weak and strong couplings; microwave filter design; characteristics of low-pass, high-pass, band-pass, band-stop filter designs; two-port network representation of junctions; $Z$ and $Y$ parameters, ABCD parameters, scattering matrix; microwave measurements; measurement of VSWR, complex impedance, dielectric constant, attenuation, and power. A design project constitutes a major part of the course.

EECE.4040 VLSI Fabrication (Formerly 16.470/EECE.4700) - Credits: 3

Fabrication of resistors, capacitors, p–n junction and Schottky barrier diodes, BJTs and MOS devices and integrated circuits. Topics include: silicon structure, wafer preparation, sequential techniques in microelectronic processing, testing and packaging, yield and clean room environments. MOS structures, crystal defects, Fick’s laws of diffusion; oxidation of silicon, photolithography including photoresist, development and stripping. Metallization for conductors, Ion implantation for depletion mode and CMOS transistors for better yield speed, low power dissipation and reliability. Students will fabricate circuits using the DSIP Laboratory.

EECE.4060 Antenna Theory and Design (Formerly 16.462/EECE.4620) - Credits: 3

EECE.4090 Directed Studies (Formerly 16.409) - Credits: 3

Provides an opportunity for qualified Electrical Engineering students to investigate specific areas of interest. The actual project undertaken may be software or hardware oriented. The most important characteristics of the projects are that the end results represent independent study, that they are research and development oriented, and that they are accomplished in an engineering environment. Design reviews and progress reports are expected for each project. A final formal report to be permanently filed in the EE Department is required for each project.

EECE.4100 Directed Studies (Formerly 16.410) - Credits: 1-3

The purpose of this course is to provide an opportunity for qualified Electrical Engineering students to investigate specific areas of interest. The actual project undertaken may be software or hardware oriented. The most important characteristics of the projects are that the end results represent independent study and that they are research and development oriented, and that they are accomplished in an engineering environment. Design reviews and progress reports are expected for each project. A final formal report to be permanently filed in the EE Department is required for each project.

EECE.4120 Directed Studies (Formerly 16.412) - Credits: 3

The purpose of this course is to provide an opportunity for qualified Electrical Engineering students to investigate specific areas of interest. The actual project undertaken may be software or hardware oriented. The most important characteristics of the projects are that the end results represent independent study and that they are research and development oriented, and that they are accomplished in an engineering environment. Design reviews and progress reports are expected for each project. A final formal report to be permanently filed in the EE Department is required for each project.

EECE.4130 Linear Feedback System (Formerly 16.413) - Credits: 3

EECE.4140 Integrated Power Systems (Formerly
16.414/514) - Credits: 3

Power System Operations and Electricity Markets provide a comprehensive overview to understand and meet the challenges of the new competitive highly deregulated power industry. The course presents new methods for power systems operations in a unified integrated framework combining the business and technical aspects of the restructured power industry. An outlook on power policy models, regulation, reliability, and economics is attentively reviewed. The course lays the groundwork for the coming era of unbundling, open access, power marketing, self-generation, and regional transmission operations.

EECE.4150 Power Electronics (Formerly 16.473/515 & EECE.4730/5150) - Credits: 3

A one-semester course with emphasis on the engineering design and performance analysis of power electronics converters. Topics include: power electronics devices (power MOSFETs, power transistors, diodes, silicon controlled rectifiers SCRs, TRIACs, DIACs and Power Darlington Transistors), rectifiers, inverters, ac voltage controllers, dc choppers, cycloconverters, and power supplies. The course includes a project, which requires that the student design and build one of the power electronics converters. A demonstrative laboratory to expose the students to all kinds of projects is part of the course.

EECE.4180 Wireless Communication (Formerly 16.418) - Credits: 3

Cellular systems and design principles, co-channel and adjacent channel interference, mobile radio propagation and determination of large scale path loss, propagation mechanisms like reflection, diffraction and scattering, outdoor propagation models, Okumura and Hata models, small scale fading and multipath, Doppler shift and effects, statistical models for multipath, digital modulation techniques QPSK, DPSK, GMSK, multiple access techniques, TDMA, FDMA, CDMA, spread spectrum techniques, frequency hopped systems, wireless systems and worldwide standards.

EECE.4210 Real Time Digital Signal Processing (Formerly 16.421) - Credits: 3

This course provides an introduction to real-time digital signal processing techniques using floating point and fixed point processors. The architecture, instruction set and software development tools for these processors will be studied via a series of C and assembly language computer projects where real-time adaptive filters, modems, digital control systems and speech recognition systems are implemented.

EECE.4230 Semiconductor Physics for Solid-State Electronics (Formerly 16.423) - Credits: 3

The course covers fundamental solid-state and semiconductor physics relevant for understanding electronic devices. Topics include quantum mechanics of electrons in solids, crystalline structures, band theory of semiconductors, electron statistics and dynamics in energy bands, lattice dynamics and phonons, carrier transport, and optical processes in semiconductors.

EECE.4240 Computational Methods for Power System Analysis (Formerly 16.424/524) - Credits: 3

The course explores some of the mathematical and simulation tools used for the design, analysis and operation of electric power systems. Computational methods based on linear and nonlinear optimization algorithms are used to solve load flow problems, to analyze and characterize system faults and contingencies, and to complete economic dispatch of electric power systems. Real case studies and theoretical projects are assigned to implement the techniques learned and to propose recommendations. Different software applications will be used concurrently including ATP, PowerWorld Simulator, Aspen, MatLab with Simulink and Power System Toolbox, PSCAD, etc.

EECE.4250 Power Distribution System (Formerly 16.4440/EECE.4440) - Credits: 3

An intermediate course in analysis and operation of electrical power distribution systems using applied calculus and matrix algebra. Topics include electrical loads characteristics, modeling, metering, customer billing, voltage regulation, voltage levels, and power factor correction. The design and operation of the power distribution system components will be introduced: distribution transformers, distribution substation, distribution networks, and distribution equipment.

EECE.4260 Power Systems Stability and Control (Formerly 16.426/526) - Credits: 3

EECE.4270 Advanced VLSI Design Techniques (Formerly 16.427/527) - Credits: 3

This course builds on the previous experience with Cadence design tools and covers advanced VLSI design techniques for low power circuits. Topics covered include aspects of the
design of low voltage and low power circuits including process technology, device modeling, CMOS circuit design, memory circuits and subsystem design. This will be a research-oriented course based on team projects.

EECE.4280 Alternative Energy Sources (Formerly 16.428) - Credits: 3

PV conversion, cell efficiency, cell response, systems and applications. Wind Energy conversion systems: Wind and its characteristics; aerodynamic theory of windmills; wind turbines and generators; wind farms; siting of windmills. Other alternative energy sources: Tidal energy, wave energy, ocean thermal energy conversion, geothermal energy, solar thermal power, satellite power, biofuels. Energy storage: Batteries, fuel cells, hydro pump storage, flywheels, compressed air.

EECE.4290 Electric Vehicle Technology (Formerly 16.429) - Credits: 3

Electric vehicle VS internal combustion engine vehicle. Electric vehicle (EV) saves the environment. EV design, EV motors, EV batteries, EV battery chargers and charging algorithms, EV instrumentation and EV wiring diagram. Hybrid electric vehicles. Fuel cells. Fuel cell electric vehicles. The course includes independent work.

EECE.4310 R F Design (Formerly 16.431) - Credits: 3

Two-port network parameters, Smith chart applications for impedance matching, transmission line structures like stripline, microstrip line and coaxial line, filter designs for low-pass, high-pass and band-pass characteristics, amplifier design based on s-parameters, bias network designs, one port and two port oscillator circuits, noise in RF systems.

EECE.4330 Electronic Materials (Formerly 16.333/EECE.3330) - Credits: 3

The production and processing of materials into finished products constitute a large part of the present economy. To prepare students for the use of a variety of traditional and new materials, this course will cover: atomic structure and chemical bonding, crystal geometry and defects, mechanical properties and phase diagrams of metals and alloys, electrical and optical properties of semiconductors, ceramics, and polymers; brief description of electronic, quantum electronic and photonic devices; benefits and difficulties of materials design with decreasing dimensions from millimeters to micrometers and to nanometers.

EECE.4410 Introduction to Biosensors (Formerly 16.441/541) - Credits: 3

This course introduces the theory and design of biosensors and their applications for pathology, pharmacogenetics, public health, food safety civil defense, and environmental monitoring. Optical, electrochemical and mechanical sensing techniques will be discussed.

EECE.4450 Analog Devices and Techniques (Formerly 16.445/565 & EECE.4450/5650) - Credits: 3

A survey of analog devices and techniques, concentrating on operational amplifier design and applications. Operational amplifier design is studied to reveal the limitations of real opamps, and to develop a basis for interpreting their specifications. Representative applications are covered, including: simple amplifiers, differential and instrumentation amplifiers, summers, integrators, active filters, nonlinear circuits, and waveform generation circuits. A design project is required.

EECE.4500 Advanced Digital System Design (Formerly 16.450) - Credits: 3

Design of logic machines. Finite state machines, gate array designs, ALU and 4 bit CPU unit designs, micro-programmed systems. Hardware design of advanced digital circuits using XILINX. Application of probability and statistics for hardware performance, and upgrading hardware systems. Laboratories incorporate specification, top-down design, modeling, implementation and testing of actual advanced digital design systems hardware. Laboratories also include simulation of circuits using VHDL before actual hardware implementation and PLDs programming.

EECE.4520 Microprocessor Systems II & Embedded Systems (Formerly 16.480/EECE.4800) - Credits: 3

CPU architecture, memory interfaces and management, coprocessor interfaces, bus concepts, bus arbitration techniques, serial I/O devices, DMA, interrupt control devices. Including Design, construction, and testing of dedicated microprocessor systems (static and real-time). Hardware limitations of the single-chip system. Includes micro-controllers, programming for small systems, interfacing, communications, validating hardware and software, microprogramming of controller chips, design methods and testing of embedded systems.

EECE.4530 Software Engineering (Formerly 16.453) - Credits: 3

Introduces software life cycle models, and engineering methods for software design and development. Design and implementation, testing, and maintenance of large software
packages in a dynamic environment, and systematic approach
to software design with emphasis on portability and ease of
modification. Laboratories include a project where some of the
software engineering methods (from modeling to testing) are
applied in an engineering example.

EECE.4560 Fundamentals of Robotics - Credits: 3

The material in this course is a combination of essential topics,
techniques, algorithms, and tools that will be used in future
robotics courses. Fundamental topics relevant to robots (linear
algebra, numerical methods, programming) will be reinforced
throughout the course using introductions to other robotics
topics that are each worthy of a full semester of study
(dynamics, kinematics, controls, planning, sensing). Students
will program real robots to further refine their skills and
experience the material fully.

EECE.4590 Introduction to Nanoelectronics (Formerly
16.459/559) - Credits: 3

This course introduces the use of nanomaterials for electronic
devices such as sensors and transistors. Synthesis methods for
nanoparticles, nanotubes, nanowires, and 2-D materials such
as graphene will be covered. The challenges in incorporating
nanomaterials into devices will also be discussed. These
methods will be compared to techniques used in the
semiconductor industry and what challenges, technically and
financially, exist for their widespread adoption will be
addressed. Finally, examples of devices that use nanomaterials
will be reviewed. The course will have some hands on
demonstrations.

EECE.4600 Biomedical Instrumentation (Formerly
16.460/560) - Credits: 3

A survey of biomedical instrumentation that leads to the
analysis of various medical system designs and the related
factors involved in medical device innovation. In addition to
the technical aspects of system integration of biosensors and
physiological transducers there will be coverage of a biodesign
innovation process that can translate clinical needs into
designs. A significant course component will be project-based
prototyping of mobile health applications. The overall goals of
the course are to provide the theoretical background as well as
specific requirements for medical device development along
with some practical project experience that would thereby
enable students to design electrical and computer based
medical systems.

EECE.4610 Engineering Electromagnetics II (Formerly
16.461) - Credits: 3

Continuation of Magnetostatics, Maxwell's Equations for
Time-varying Fields, plane waves: time-harmonic fields,
polarization, current flow in good conductors and skin effect,
power density and Poynting vector, wave reflection and
transmission; Snell's Law, fiber optics, Brewster angle,
radiation and simple antennas, electromagnetic concepts
involved in a topical technology in development.

EECE.4670 Special Topics (Formerly 16.467) -
Credits: 3

Topics of current interest in Electrical and Computer
Engineering. Subject matter to be announced in advance.

EECE.4680 Electro-optics & Integrated Optics
(Formerly 16.468) - Credits: 3

An introduction to physical optics, electro-optics and
integrated optics. Topics include: Waves and polarization,
optical resonators, optical waveguides, coupling between
waveguides, electro-optical properties of crystals, electro-optic
modulators, Micro-Optical-Electro-Mechanical (MEMS)
Devices and photonic and microwave wireless systems.

EECE.4690 VLSI Design (Formerly 16.469/502 &
EECE.4690/5020) - Credits: 3

Introduction to CMOS circuits including transmission gate,
inverter, NAND, NOR gates, MUXes, latches and registers.
MOS transistor theory including threshold voltage and design
equations. CMOS inverter's DC and AC characteristics along
with noise margins. Circuit characterization and performance
estimation including resistance, capacitance, routing
capacitance, multiple conductor capacitance, distributed RC
capacitance, multiple conductor capacitance, distributed RC
capacitance, switching characteristics incorporating analytic
delay models, transistor sizing and power dissipation. CMOS
circuit and logic design including fan-in, fan-out, gate delays,
logic gate layout incorporating standard cell design, gate array
layout, and single as well as two-phase clocking. CMOS test
methodologies including stuck-at-0, stuck-at-1, fault models,
fault coverage, ATPG, fault grading and simulation including
scan-based and self test techniques with signature analysis. A
project of modest complexity would be designed to be
fabricated at MOSIS.

EECE.4720 Embedded Real Time Systems (Formerly
16.472) - Credits: 3

Designing embedded real-time computer systems. Types of real-
time systems, including foreground/background, non-
preemptive multitasking, and priority-based pre-emptive
multitasking systems. Soft vs. hard real time systems. Task
scheduling algorithms and deterministic behavior. Ask
synchronization: semaphores, mailboxes and message queues.
Robust memory management schemes. Application and design
of a real-time kernel. A project is required.

EECE.4760 Principles Of Solid State Devices
(Formerly 16.474/EECE.4740) - Credits: 3

This course introduces the operating principles of Solid State Devices. Basic semiconductor science is covered including crystalline properties, quantum mechanics principles, energy bands and the behavior of atoms and electrons in solids. The transport of electrons and holes (drift and diffusion) and the concepts of carrier lifetime and mobility are covered. The course describes the physics of operation of several semiconductor devices including p-n junction diodes (forward/reverse bias, avalanche breakdown), MOSFETs (including the calculation of MOSFET threshold voltages), Bipolar transistor operation, and optoelectronic devices (LEDs, lasers, photodiodes).

EECE.4811 Operating Systems (Formerly 16.481/EECE.4810) - Credits: 3

Covers the components, design, implementation, and internal operations of computer operating systems. Topics include basic structure of operating systems, Kernel, user interface, I/O device management, device drivers, process environment, concurrent processes and synchronization, inter-process communication, process scheduling, memory management, deadlock management and resolution, and file system structures. Laboratories include examples of components design of a real operating systems.

EECE.4821 Computer Architecture and Design
(Formerly 16.482/EECE.4820) - Credits: 3

EECE.4830 Network Design: Principles, Protocols & Applications (Formerly 16.483) - Credits: 3

Covers design and implementation of network software that transforms raw hardware into a richly functional communication system. Real networks (such as the Internet, ATM, Ethernet, Token Ring) will be used as examples. Presents the different harmonizing functions needed for the interconnection of many heterogeneous computer networks. Internet protocols, such as UDP, TCP, IP, ARP, BGP and IGMP, are used as examples to demonstrate how internetworking is realized. Applications such as electronic mail and the WWW are studied.

EECE.4841 Computer Vision and Digital Image Processing (Formerly 16.484/EECE.4840) - Credits: 3

Introduces the principles and the fundamental techniques for Image Processing and Computer Vision. Topics include programming aspects of vision, image formation and representation, multi-scale analysis, boundary detection, texture analysis, shape from shading, object modeling, stereovision, motion and optical flow, shape description and objects recognition (classification), and hardware design of video cards. AI techniques for Computer Vision are also covered. Laboratories include real applications from industry and the latest research areas.

EECE.4900 Fiber Optic Communication (Formerly 16.490) - Credits: 3

Optical fiber; waveguide modes, multimode vs single mode; bandwidth and data rates; fiber losses; splices, couplers, connectors, taps and gratings; optical transmitters; optical receivers; high speed optoelectronic devices; optical link design; broadband switching; single wavelength systems (FDDI, SONET, ATM); coherent transmission; wavelength division multiplexing and CDMA; fiber amplifiers.

EECE.4991 Capstone Project (Formerly 16.499) - Credits: 3

The objective of this course is to execute the project defined in Capstone Proposal. The design of the project will be completed, prototyped, tested, refined, constructed and delivered to the client. Practical experience will be gained in solving engineering problems, designing a system to meet technical requirements, using modern design elements and following accepted engineering practices. Students will work in a team environment and deliver the completed system to the project client. Proper documentation of activities is required.
Suggested Degree Pathway for Industrial Engineering

For students who entered fall 2020 and beyond.

### Total Minimum Credits = 127

1. Industrial Engineering majors must take one course that meets the Core Curriculum Essential Learning Outcome of Diversity and Cultural Awareness (DCA); students must select at least one Breadth of Knowledge course in either Arts and Humanities or Social Sciences that has been approved for DCA. Please see the DCA course listing (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for a complete list of classes that fulfill this requirement.

2. Technical electives must be taken at the 4000 level or above in engineering. Technical electives can also be taken at the 3000 level or above in math (excluding MATH.3630, MATH.4100, MATH.4190, MATH.4350, and MATH.4660), physics, or other science discipline.
No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum policy for further details. You should meet with your faculty advisor to determine how you will meet the Core Curriculum requirements.

Current UMass Lowell students should use their Advisement Report in SIS. If you need assistance, please contact your advisor.

Restriction on off-campus study:

Be advised that any course taken at another institution must be formally approved prior to enrollment. See the catalog policy for details.

Last Updated: 12/02/2021

Educational Objectives and Learning Outcomes

Program Educational Objectives are defined as the expected accomplishments of graduates of the program in first few years after graduation. Graduates of the BSE Industrial Engineering program at the University of Massachusetts at Lowell will be able to:

- Pursue successful careers, in mechanical engineering or related fields, that sustain or improve socio-economic levels for themselves and their families and/or enhance personal fulfillment.
- Engage in continuing education and development in their professional field.
- Engage in service activities, related to their profession, that benefit society and the community.
- Continually evaluate their professional actions in light of their personal and professional ethics.

- Apply the principles of sustainable engineering in their professional careers.

The student outcomes for the BSE degree in industrial engineering at UMass Lowell are as follows. At graduation students should:

- Be able to apply the principles of advanced engineering math and science to the solution of problems in engineering.
- Be able to design and conduct experiments, as well as to analyze and interpret data.
- Be able to design, build, and test a system, component, or process to meet required needs.
- Be able to integrate the use of modern computer-based engineering tools into engineering practice.
- Be able to communicate effectively and function on multi-disciplinary teams.
- Understand the need to assess the impact of engineering designs on society. This should include factors such as economics, ergonomics, the environment, and sustainability.
- Understand the concept of the engineering profession through an exposure to professional societies, professional registration, the need for lifelong learning, and professional ethics.

Educational Objectives and Learning Outcomes

Program Educational Objectives are defined as the expected accomplishments of graduates of the program in first few years after graduation. Graduates of the BSE Mechanical Engineering program at the University of Massachusetts at Lowell will be able to:

1. pursue successful careers, in mechanical engineering or related fields, that enhance personal fulfillment and contribute positively to society and their communities.
2. engage in lifelong continuing education and development in their professional field.
3. engage in service activities, related to their profession, that benefit society and their communities.
4. continually evaluate their professional actions in light of their personal and professional ethics.
5. apply the principles of sustainable engineering in their professional careers.
6. effectively participate in and collaborate with local, national and international inter/multidisciplinary/cross-cultural teams.

The **student outcomes** for the BSE degree in mechanical engineering at UMass Lowell are as follows. At graduation, students should:

1. an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. an ability to communicate effectively with a range of audiences
4. an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
5. an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
6. an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. an ability to acquire and apply new knowledge as needed, using appropriate learning strategies
8. an ability to integrate the use of modern computer-based engineering tools into engineering practice

### Total Minimum Credits = 127

1. Technical electives must be taken at the 4000 level or above in engineering (MECH.xxxx), CIVE.xxxx, PLAS.xxxx, BMEN.xxxx, CHEN.xxxx, EECE.xxxx. Technical electives can also be taken at the 3000 level or above in math (excluding MATH.3630, MATH.4100, MATH.4190, MATH.4350, and MATH.4660), physics, or other science discipline.

2. Students entering after Fall 2009 must achieve C- (C minus) or better in MECH.2010, MECH.2020, ENGN.2050.
Students entering Fall 2014, and later, must achieve a C- in these courses before attempting a subsequent course in the prerequisite chain.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum policy for further details. You should meet with your faculty advisor to determine how you will meet the Core Curriculum requirements.

Current UMass Lowell students should use their Advisement Report in SIS. If you need assistance, please contact your advisor.

Restriction on off-campus study:

Be advised that any course taken at another institution must be formally approved prior to enrollment. See the catalog policy for details.

Last Updated: 11/08/2021
MECH.1010 Kinetic Projects - Credits: 3
Kinetic Projects is a hybrid course designed for a variety of majors to explore the intersections between mechanical engineering and sculpture. In this project-driven class, students will learn principles and practice in both the fields of engineering and art, and put them into practice by creating functioning kinetic objects to be displayed in a public setting. The course will also include guest lectures from practitioners in Art and Engineering. The course also provides an introduction to technical communications, teamwork, data analysis, computer coding, and introduction to CAD prototyping, report-writing and/or oral presentation.

MECH.1070 Introduction to Mechanical Engineering (Formerly 22/25.107) - Credits: 2
This course provides a hands-on introduction to mechanical engineering and the engineering design process. Through assignments and projects, students learn how to: identify a problem, develop alternative solutions, select the best alternative, make critical decisions, and work as a team. Lecture and lab component.

MECH.1CO-OP Curricula Practical Training - Credits: 0-1
Curricula Practical Training. "Variable credit course, student chooses appropriate amount of credits when registering."

MECH.2000 Mechanical Engineering Project I (Formerly 22.200) - Credits: 1
Students work on engineering design/build/test (DBT) projects under the supervision of a mechanical engineering faculty member. Projects can include student club based DBT projects.

MECH.2010 Computer Aided Design (Formerly 22.201) - Credits: 2
Course emphasis is on introducing the use of computer aided design tools in the engineering problem solving process. Assigned design projects require the use of both wire frame and solid modeling tools. Lecture and lab activities are used to support project requirements, and to provide more in-depth understanding of computer aided engineering design and drawing.

MECH.2020 Manufacturing Laboratory (Formerly 22.202) - Credits: 2
This is an introductory course in manufacturing processes covering the basic machine tool practices utilized in the manufacturing of a product. The objective of the course is to develop a broad understanding of manufacturing operations and their relationship to engineering product design. Students manufacture, fabricate and measure the accuracy of a mechanical assembly from design drawings, using lathes, milling machines, drill presses and other conventional processes.

MECH.2420 Thermodynamics (Formerly 22.242) - Credits: 3
The first and second laws of thermodynamics are introduced and applied to the analysis of thermodynamic systems in terms of work, heat, energy transformation, and system efficiency. The use of tables, graphs, and equations of state is introduced to obtain various properties of pure substances. The concepts of work, heat and energy, as well as their relationships, are studied. The theory and application of reversible and irreversible thermodynamic process, Carnot cycles, and entropy are studied in relation to the energy analysis of engineering systems. Energy balances and ideal efficiencies of steady flow engineering systems are analyzed.

MECH.2960 Materials Science for Engineers (Formerly 22.296) - Credits: 3
Properties and characterization of engineering materials. The behavior of engineering materials is studied experimentally to develop an understanding of properties important in materials selection and engineering design. Structure-property-processing relationships are discussed. Topics include stress, strain, strength, stiffness, thermal expansion, hardness, tensile and bending tests, strain gages, corrosion, microstructure of metals, polymers, ceramics and composites.

MECH.3000 Mechanical Engineering Project II (Formerly 22.300) - Credits: 1
Students work on engineering design/build/test (DBT) projects under the supervision of a mechanical engineering faculty member. Projects can include student club based DBT projects.

MECH.3020 Instrumentation and Measurement Laboratory (Formerly 22.302) - Credits: 3
Students set up and conduct specific experiments designed to study: 1) fundamental ME instrumentation systems; 2) fundamental experimental techniques and 3) basic physical principles of mechanical systems. Experiments are divided into two areas; solid-mechanical and thermo-fluids. Students develop models for use in validating and comparing with experimental results. Written communication techniques are emphasized.
MECH.3110 Applied Strength of Materials (Formerly 22.311) - Credits: 3

Strength of materials principles are applied to the stress analysis of machine components and structures. The effects of buckling and combined bending, torsion, and axial loadings are studied together with the effects of stress risers due to geometrical complexities. Topics include: 3D stress transformations; principal stresses; Mohr’s circle; failure criteria; torsion of non-circular and hollow cross sections; stress concentration factors; equilibrium and energy methods; global and local buckling; introduction to finite element methods; introduction to composites.

MECH.3210 Kinematics of Mechanisms (Formerly 22.321) - Credits: 3

Design and kinematic analysis of mechanisms. Course topics include linkage synthesis and motion analysis (position, velocity and acceleration), cam, gear and power train design, and technical communication. This course meets the Essential Learning Outcome of Critical Thinking and Problem Solving as defined under the Core Curriculum requirements. As such, the course will reinforce the students’ ability to identify, analyze, interpret, and evaluate arguments, data, evidence, problems, and conclusions as part of formulating an opinion or conclusion, and then use that information to design, evaluate and implement a strategy to achieve a desired outcome.

MECH.3220 Control of Mechanical Systems (Formerly 22.322) - Credits: 3

Design of cams and gear trains and control of mechanical devices. Course topics include: cam sizing and manufacture, cam and gear train kinematics, dynamic force analysis, machine balancing, introduction to the control of mechanical systems. The major project involves the design, analysis, manufacture, and dynamic testing of a cam having specified performance requirements; computer aided design (CAD) and computer numerically controlled (CNC) milling machines are applied. Dynamic simulation (MATLAB) is used throughout the course.

MECH.3230 Control of Automated Systems - Credits: 3

Control of various elements of automated and cyber-physical systems. Course topics include: introduction to modeling in continuous and discrete time, ordinary differential and difference equations, transfer functions, noise modeling and digital filtering, introduction to feedback control, and PID controller design and tuning. Course will also include discussion of case studies related to the security, stability, safety, reliability, and ethics of automated systems, with focus on diagnostics and prognostics. This course will rely on project-based learning to evaluate outcomes.

MECH.3410 Conduction & Radiation Heat Transfer (Formerly 22.341) - Credits: 3

The theory of steady state and transient heat conduction in solids is developed and applied. The concepts of Biot and Fourier numbers are covered and their applications are studied. The principals of thermal radiation with application to heat exchange between black and non-black body surfaces are studied. The use of radiation networks (electrical network analog) is examined. Surface radiation properties are extensively covered. Design projects are integrated into the course.

MECH.3420 Convective Processes (Formerly 22.342) - Credits: 3

Internal and external flows with friction, Reynold’s number, laminar and turbulent flows. Mathematical development of the hydrodynamic boundary layer. Boundary layer separation and fluid dynamic drag. Flow in pipes. Forced and free convective heat transfer, the thermal boundary layer, Reynolds’ analogy, Prandtl and Grashof numbers. Empirical engineering convection relations. Students engage in a design project throughout the term.

MECH.3610 Mathematical Methods for Mechanical Engineers (Formerly 22.361) - Credits: 3

This course focuses of the application of a variety of mathematical techniques to solve engineering problems. Topics include, error analysis, root finding, optimization, linear algebra, solutions to linear and non-linear systems, statistics, curve fitting, eigen value analysis, Fourier analysis, numerical integration and differentiation as well as numerical solutions to ordinary differential equations. MATLAB program development and modification as well as application of existing codes are required.

MECH.3810 Fluid Mechanics (Formerly 22.381) - Credits: 3

A calculus-based engineering course which deals with the development of basic fluid mechanic relations. Emphasis is placed on the control-volume approach for solving problems. Topics includes fluid behavior and fluid properties: hydrostatic pressure and forces; buoyancy and stability; continuity, momentum, and Bernoulli equations; similitude and dimensional analysis; scale analysis and modeling; internal and external flows with friction; Reynolds number; laminar and turbulent flows; mathematical development of the hydrodynamic boundary layer; boundary layer separation and fluid dynamic drag; fluid flow in pipes and ducts.; friction and
minor losses.

MECH.3820 Heat Transfer (Formerly 22.382) - Credits: 3

A calculus-based engineering course providing treatment of the fundamental modes of heat transfer. Topics include: steady-state and transient heat conduction in solids; forced and natural convection; the concept of thermal boundary layer; scale analysis and dimensionless number such as Reynolds, Prandtl, and Grashof numbers; Reynolds analogy; empirical engineering convection relations; thermal radiation involving heat exchange between black and non-black body surfaces.

MECH.4000 Mechanical Engineering Project III (Formerly 22.400) - Credits: 1

Students work on engineering design/build/test (DBT) projects under the supervision of a mechanical engineering faculty member. Projects can include student club based DBT projects. Completion of 22.400, 22.300, and 22.200 can count as a mechanical engineering technical elective (academic petition required).

MECH.4030 Thermal Fluids Laboratory (Formerly 22.403) - Credits: 3

Continuation of Mechanical Engineering Lab I. Focuses on digital data acquisition systems used on mechanical engineering equipment. Students design measurement systems composed of various transducers, their associated signal conditioners and digital data acquisition and recording devices. Statistical methods are emphasized. Experiments require the students to provide calibration and to select appropriate sampling rates and test durations. Systems under test range from simple multisensor laboratory apparatus to actual operating mechanical systems. Meets Core Curriculum Essential Learning Outcome for Quantitative Literacy (QL).

MECH.4040 Advanced Mechanical Dynamic Measurement Systems (Formerly 22.404) - Credits: 3

This course is an extension of 22.302 Mechanical Engineering lab I, and extends the laboratory measurements for a wide variety of dynamic systems applications including first order and second order systems using both time domain and frequency domain approaches for the measurement and analysis of dynamic response. Lectures will delve into more depth on time domain digital signal processing (extending the ME lab I course material) and progress into frequency domain representations of time response. This course counts as a mechanical engineering technical elective.

MECH.4230 Capstone Design (Formerly 22.423) - Credits: 3

Students perform independent design work and participate in team efforts to develop conceptual designs from functional requirements. Perform design analysis and synthesis, modeling, fabrication, testing, cost estimating, and documenting the essential elements of the system design. Meets Core Curriculum Essential Learning Outcome for Applied & Integrative Learning (AIL), Information Literacy (IL), and Written & Oral Communication (WOC).

MECH.4250 Design of Machine Elements (Formerly 22.425) - Credits: 3

The principles of mechanics and commonly used failure theories are applied to the design and analysis of machine elements subjected to static and dynamic (fatigue) load conditions. Elements studied include power screws, bolts, springs, bearings, gears, lubrication, shafts, brakes, clutches, and belts.

MECH.4260 Green Energy Engineering (Formerly 22.426) - Credits: 3

Introduces a comprehensive range of green energy sources, and the tools and techniques to use that energy. A strong emphasis is given to residential applications, particularly those that are cost effective. Topics include solar energy, photovoltaic, water power, wind power, geothermal heating, and bio-fuel production and use. Course will also investigate architectural considerations essential to effective implementation of green energy. Course is open to Seniors in engineering and science and those with a solid knowledge of vector notations and college algebra. Familiarity with the MATLAB computing environment would be useful.

MECH.4280 Fundamentals of Engineering (ME) Review (Formerly 22.428) - Credits: 3

This is a review course for students planning on taking the Mechanical Engineering version of the Fundamentals of Engineering (FE) Exam. Lectures will review theory, and students will be required to complete representative multiple-choice practice and test questions. Subject areas to be covered are as follows: mathematics and statistics, computers, ethics and economics, electromagnetism, engineering mechanics, materials, thermal fluids, measurement and instrumentation, dynamic systems and controls, and ME design and analysis. FE exam protocols will also be reviewed. The course counts as a mechanical engineering technical elective. Taking and/or passing the FE exam is not required in order to pass this course.
22.441) - Credits: 3
Topics covered include: heat exchanger analysis and design; thermodynamic analysis of: gas power cycles, steam and combined cycles, and refrigeration cycles; mixtures of ideal gases; air-vapor mixtures and psychrometric charts with application to air conditioning systems; flow of a compressible fluid through a variable area passage: Mach number, choking conditions, and normal shock.

MECH.4420 Thermo-fluid Systems Design (Formerly 22.442) - Credits: 3
Application of the principles of thermodynamics, fluid mechanics and heat transfer to the design of thermofluid systems. Techniques will be presented for modeling, simulation, and economic analysis. The evolution of thermofluid systems from the Industrial Revolution to state-of-the-art systems as well as economic, environmental, social, political, ethical, health and safety, manufacturability and sustainability of systems will be studied. Use and regulation of thermo-fluid systems on a global and regional scale will be investigated. Systems to be studied and designed include combined power cycles, trigeneration (combined power, heating, and cooling) as well as energy storage systems.

MECH.4510 Dynamic Systems Analysis (Formerly 22.451) - Credits: 3
Dynamic modeling of mechanical, electrical, electro-mechanical, hydraulic and thermal components. Application of ordinary differential equations, Laplace transforms, and numerical simulation for the response of these systems; response due to initial conditions and to transient and sinusoidal inputs using both time and frequency domain approaches considered. Use of block diagrams and numerical simulation using MATLAB and Simulink for linear time invariant systems is emphasized. Project work includes model identification and synthesis from measured data for first and second order systems.

MECH.4530 Mechatronics (Formerly 22.453) - Credits: 3
Devices and methods to monitor and control mechanical systems, with particular emphasis on the use of embedded microprocessors.

MECH.4730 Design Theory and Constraints (Formerly 22.473) - Credits: 3
Concepts of world class design and manufacturing of modern products, including the issues of Design for Quality (DFQ), cost and the customer will be studied. Tools and techniques to be studied include Total Quality Management (TQM), statistical process control, process capability studies, six sigma quality, design efficiency ratings, design for cost, design of experiments, Analysis of Variance (ANOVA) of the mean and signal-to-noise ratio, and quality function deployment. Industrial case studies are used and student project work is required.

MECH.4830 Aerodynamics and Flight Mechanics (Formerly 22.483) - Credits: 3

MECH.4860 Ocean Engineering (Formerly 22.486) - Credits: 3

MECH.4910 Industrial Experience I (Formerly 22.491) - Credits: 1-3
MECH.4920 Industrial Experience II (Formerly 22.492) - Credits: 3
MECH.4930 Industrial Experience III (Formerly 22.493) - Credits: 3-9
MECH.4991 Directed Studies in Mechanical Engineering (Formerly 22.499) - Credits: 1-3
This course provides seniors in Mechanical Engineering with the opportunity to pursue the study of a technical topic or project, individually under the supervision of a faculty member and, if desired, a responsible project engineer from industry. The course is to result in a term paper or technical report.

MTEC.2030 Introduction to Automated Control Programming - Credits: 1-3
This course is designed to introduce machine tool programming languages and their use in modern manufacturing. Emphasis will be placed upon students developing a formal understanding of the programming variables and constraints of Computer-Numerically Controlled
manufacturing systems. Students will learn both introductory and advanced programming methods. Students will learn manual programming techniques developed from engineering drawings. Students will also learn manual programming techniques developed from engineering drawings. Students will also learn to use computer-based CAM software systems as well as computer-based programming verification software. Mastercam, Esprit CAM, Autodesk CAM will be introduced in the course as exemplars of CAM software platforms. Vericut will be introduced as an exemplar of verification software.

MTEC.2040 Manufacturing Technology Laboratory
(Formerly 23.301/MTEC.3010) - Credits: 2

Students will develop an understanding of precision metrology and the machine tools, related equipment, and systems used in manufacturing. Students will learn the inter-relationships between machine tools, various machining methods, engineering design considerations, and manufacturing techniques studied in the MET program. Lecture, case studies, and laboratory work are supported by a comprehensive text with supplemental materials provided by the instructor to enhance student learning. Students will work with lathes, drill presses, vertical milling machines, and abrasive finishing methods during laboratory sessions to manufacture several precision finished parts from engineering drawings. Course grades will be determined from student performance on examinations and laboratory projects.
Learning Outcomes and Educational Objectives

The primary objective of the Plastics Engineering Program is to provide a well-rounded engineering education that prepares our graduates to be readily employable professionals for a successful lifetime career. The curriculum aims to foster professionalism, ethics and safety with the highest standard of academic excellence in plastics engineering amidst a caring environment for students of diverse backgrounds with these Program Educational Objectives:

- Graduates are expected to attain successful careers and be supportive of people with diverse backgrounds.
- Graduates are expected to pursue lifelong learning that addresses, from concept to commercialization, the design and manufacture of plastic products.
- Graduates are expected to apply theoretical knowledge and practical skills so that they make positive contributions.
- Graduates are expected to attain project/team leadership skills, allowing them to pursue advanced degrees in support of technical and managerial careers.
- Graduates are expected to recognize and adapt to emerging issues in Plastics Engineering such as globalization, environmental concerns, and sustainability.

Plastics Engineering graduates shall meet the student outcome requirements of ABET Criterion 3 as follows:

- an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
- an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
- an ability to communicate effectively with a range of audiences
- an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
- an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
- an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
- an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Degree Pathways

Degree Pathways are a semester-by-semester sequence of courses recommended for successful completion of a degree, diploma, credential or certificate from the university.

Plastics Engineering

- fall 2018 and beyond
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
- fall 2015 - spring 2018
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
PLAS.0010 Plastics Safety Lecture (Formerly 26.001)  
- Credits: 0

All Plastics Engineering students enrolled in a plastics laboratory course are required to attend a one hour per week safety lecture for safety training.

PLAS.0020 Plastics Safety Lecture (Formerly 26.002)  
- Credits: 0

All Plastics Engineering students enrolled in a plastics laboratory course are required to attend a one hour per week safety lecture for safety training. Continuation of 26.001.

PLAS.1070 Introduction to Plastics Engineering (Formerly 25.107/26.107) - Credits: 2

This course is designed to teach basic principles of technical drawing, fundamentals of design, fundamentals of computer aided design (CAD), dimensioning and tolerances. Basic concepts of manufacturing, rapid prototyping and 3D printing are covered. The lecture component covers theoretical information, and the lab component covers hands-on learning, where students learn to use a commercial CAD software.

PLAS.1080 Introduction to Polymer Sustainability - Credits: 3

This course provides a foundation in the principles of environmental sustainability and the relationship of polymers and plastics to the environment. The course introduces principles of lifecycle and material flow analysis, waste management, circular design, green chemistry and engineering and renewable materials. The basic concepts underpinning recyclability and toxicity are covered. We discuss current challenges of waste management systems and future options for increasing use of secondary feedstocks. Students learn about properties of biobased and biodegradable plastics. The course also covers fate of plastics in the environment and strategies for reducing leakage. The overarching objective is to provide an understanding of environmental challenges and solutions in the plastics industry.

PLAS.2010 Polymer Materials I (Formerly 26.201) - Credits: 3

This introductory course in plastics materials first evaluates how commercial plastics were developed, characterized and compared throughout the relevant industry. Various ASTM testing protocols are reviewed followed by an initial study of commodity plastic materials, including polyethylene, poly (vinyl chloride), polystyrene, diene rubbers and other selected and relatively high-volume resins. Applicable commercial polymerization methods are introduced along with comparative structure/property relationships. Initial comparisons are drawn as between commodity thermoplastic resins and thermoset compositions. Comparative end-use applications are continuously discussed along with a consideration of selected environmental issues (recyclability).

PLAS.2020 Polymer Materials II (Formerly 26.202) - Credits: 3

A critical review of the commercial family of materials known as engineering thermoplastics including an examination of relatively important thermoset polymer systems. Major commercial polymerization reactions are reviewed (e.g. applicable chain growth or step-growth polymerizations) including comparative market performance based upon mechanical, thermal, chemical properties and environmental considerations. Also considered are selective high performance plastic materials suitable for use at elevated temperatures and in other relatively extreme working environments. Recommended Pre-Req: 26.201 Polymer Materials I.

PLAS.2100 Professional Development Seminar (Formerly 26.210) - Credits: 1

The Professional Development Seminar is designed to provide students with the necessary structure, resources, and support to successfully secure and engage in their first Plastics Cooperative Education experience. Through a variety of interactive teaching methodologies and assignments, students will participate in a sequence of learning activities including self-assessment, industry research, and the development of co-op learning objectives. Students will prepare to engage in the job search process through resume-writing, strategic interviewing, professional networking and learn professional behavior and presentation skills. The goal of the course is to assist each student in developing a sound plan of action to successfully participate in the cooperative education experience.

PLAS.2110 Engineering Mechanics (Formerly 26.211) - Credits: 3

Equilibrium of structures subjected to forces and moments. Area and mass moments of inertia,. Internal forces, shear and bending moments acting on loaded structures, including cantilevers, beams, trusses, bridges and machine frames. Friction.

PLAS.2120 Dynamics (Formerly 26.212) - Credits: 1

This course covers the fundamentals of Newtonian mechanics, including kinematics, motion relative to accelerated reference frames, work and energy, impulse and momentum, 2D and 3D rigid body dynamics. The course pays special attention to applications in plastics engineering including introductory topics in material and energy balance.
PLAS.2150 Plastics Processing Engineering Laboratory I (Formerly 26.215) - Credits: 1

This lab course focuses on physical property testing of plastics. The tests covered include tensile properties, flexural properties, pendulum impact resistance, drop impact resistance, surface properties, and melt flow rate. The effect of environment on many of these properties is also evaluated.

PLAS.2160 Plastics Process Engineering Laboratory II (Formerly 26.216) - Credits: 1

This laboratory introduces students to the plastics manufacturing processes of single screw extrusion, injection molding, blow molding, sheet thermoforming and rotational molding. Experiments are designed so that the student will understand the theory of polymer conversion techniques by the interaction between process variables and materials characteristics.

PLAS.2180 Introduction to Design (Formerly 26.218) - Credits: 2

This course is designed to teach basic principles of technical drawing, fundamentals of design, dimensioning and tolerances. Basic concepts of manufacturing and rapid prototyping are covered. The lecture component covers theoretical information, and the lab component covers hands-on learning, where students learn to use a commercial CAD software. Meets Core Curriculum Essential Learning Outcome for Applied &Integrative Learning (AIL).

PLAS.2190 Principles of Processing Equipment & Automation - Credits: 4

This course provides a theoretical understanding of the design of plastics processing equipment and automation. Each system will be studied and analyzed discretely, including the safety interlock system, hydraulic power system, pneumatic system, high voltage AC electrical power system, low voltage DC electrical control system, user interface with programmable logic controller (PLC), optical sensors, and associated mechanical aspects of the design. For each system, functions of components will be introduced, the theory underlying their operation will be discussed and analyzed, and components will be incorporated into a complete machine system detailed on associated machine prints. Lab will provide practical examples of the theory discussed in class.

PLAS.2470 Thermodynamics (Formerly 26.247) - Credits: 3

This course introduces the concepts of system definition, pure substance properties, phase behavior and engine cycles. The laws of Thermodynamics are introduced and used to determine equilibrium states of systems, conservation of energy and directionality of energy transformation. Mathematical analysis of closed and flowing systems and engineering devices used in polymer processing is reviewed. It concludes with a discussion of introductory level polymer thermodynamics. Meets Core Curriculum Essential Learning Outcomes for Quantitative Literacy (QL).

PLAS.3060 Methods of Experimental Analysis (Formerly 26.306) - Credits: 3

Methods for design and analysis of experiments provided in three course modules: (1) descriptive and inferential statistics for hypothesis testing; (2) analysis of variance and linear regression for model building; and (3) factorial, fractional factorial, and response surface design of experiments for decision support and optimization. Course incorporates project work with modern statistical programming. Meets Core Curriculum Essential Learning Outcome for Quantitative Literacy (QL) and Critical thinking and problem solving (CTPS).

PLAS.3100 Co-op Assessment I (Formerly 26.310) - Credits: 1

The primary goal of this seminar is to assist students in the overall assessment of their overall cooperative education experience. Through facilitated small group discussion, individual consultation and hands on practice, students will have an opportunity to identify and articulate their technical and professional skills, and explore how these skills and their co-op employment might be translated and leveraged into future work environments and their academic program at UML.

PLAS.3140 Fluid Flow (Formerly 26.314) - Credits: 3

PLAS.3150 Plastics Process Laboratory III (Formerly 26.315) - Credits: 1

This laboratory introduces students to the plastics manufacturing processes of twin screw extrusion, film extrusion, tube extrusion, and injection molding process monitoring. Experiments are designed so that the student will understand the theory of polymer conversion techniques by the interaction between process variables and material
PLAS.3160 Plastics Process Engineering Laboratory IV (Formerly 26.316) - Credits: 1
This laboratory introduces students to variations of injection molding, extrusion, blow molding and thermoset manufacturing processes not previously studied. Advanced process set-up, including design of experiments, is covered. Experiments are designed so that the student will understand the theory of polymer conversion techniques by the interaction between process variables and material characteristics.

PLAS.3200 Co-op Assessment I (6 months) - Credits: 2
This seminar is designed to support and assist students in the assessment of their 6 month cooperative education experience. Students will reflect on their extended time in a work environment, the impact of their experience on their planning, and how organizational culture, personal interests and values can inform their subsequent decisions for career development. Through facilitated small group discussions, individual consultation and hands on practice, students will have the opportunity to identify and articulate their technical and professional skills.

PLAS.3480 Heat Transfer (Formerly 26.348) - Credits: 3
This course covers the theory and application of steady and transient heat conduction, convection, and radiation. Particular emphasis is placed on heat transfer problems in plastics processing and modern engineered systems. Computational methods and analysis of heat exchangers are covered.

PLAS.3730 Mold Engineering (Formerly 26.373) - Credits: 4
The course provides a comprehensive systematic approach to mold engineering and design, specifically focused on injection molds. Topics are presented in a top-down manner, beginning with significant design objectives and constraints followed by application specific analysis. Topics include: mold types and functions, mold layout, cost estimation, cavity filling, feed systems, gating, venting, cooling systems, shrinkage, ejector systems, and structural design. Junior status or permission of instructor. Includes laboratory experience in mold design and mold making.

PLAS.3780 Plastics Process Engineering II (Formerly 26.378) - Credits: 3
Plastics Process Engineering II introduces four of the five major plastics forming (manufacturing) processes: rotational molding, thermoforming, blow molding, and injection molding with emphasis on how polymeric materials, machine and tooling components, and process variables affect properties of the products produced with each process. The course also examines melt mixing in polymer processing, including mixing in single screw systems and mixing in co-rotating twin screw extruders.

PLAS.3810 Polymer Science for Engineers I (Formerly 26.381) - Credits: 3
An introduction to polymer science with a focus on making polymers. Topics covered include the chemistry, kinetics, and statistics of step and chain polymerizations and copolymerizations, polymerization processes. Industrially relevant polymers and commercial polymerization processes will be highlighted, with coverage of the health and safety aspects of various approaches to the preparation of various polymers given. Meets Core Curriculum Essential Learning Outcome for Quantitative Literacy (QL).

PLAS.3820 Polymer Science for Engineers II (Formerly 26.382) - Credits: 3
An introduction to polymer science with a focus on polymer properties and behavior. Topics covered include analytical techniques (chemical, thermal, and microstructural analysis of polymers, measurement of molecular weight distribution, etc.), as well as the underlying physical, rheological and solution properties that make these techniques possible. Recommended Pre-Req: 26.381 Polymer Science for Engineers I

PLAS.3830 Polymer Science I Lab (Formerly 26.383) - Credits: 1
Synthesis of polymers by step growth, condensation, suspension and free radical emulsion polymerization techniques. Fundamental concepts in polymerization kinetics and mechanism will be covered as well as structure-property considerations and polymerization with functional groups.

PLAS.3840 Polymer Science II Lab (Formerly 26.384) - Credits: 1
Polymer characterization techniques including molecular weight distribution by gel permeation chromatography, crystallinity and order by differential scanning calorimetry; polymer morphology and surface properties, and spectroscopic (nuclear magnetic resonance, Raman, infrared) and mechanical (tensile, dynamic mechanical, rheological) techniques will also be covered. Recommended Pre-Reqs: 26.381 Polymer Science for Engineers I and 26.383 Polymer Science I Lab; Co-Req: 26.382 Polymer Science for Engineers II.
PLAS.3CO-OP Plastics Engineering Curricular Practical Training (CPT)  (Formerly 26.3CO-OP) - Credits: 0-1

Plastics Engineering Curricular Practical Training (CPT). "Variable credit course, student chooses appropriate amount of credits when registering."

PLAS.4020 Medical Device Development Regulation - Credits: 3

Comprehensive and in-depth analysis of US medical device diagnostics development and approval requirements. Detailed analysis of quality assurance issues and regulatory reforms implemented under the Food and Drug Administration. Provides a step-by-step guide through the Center for Devices and Radiological Health (CRDH) investigational device exemptions, premarket approval, 510 (k) application process, and product development protocol and review processes.

PLAS.4030 Mechanical Behavior of Polymers  (Formerly 26.403/503) - Credits: 3

Topics covered in this course include linear viscoelasticity, creep, stress relaxation, dynamic behavior, hysteresis, stress-strain response phenomena, principles of time-temperature superposition, rubber elasticity, failure and fracture mechanisms for polymers, and the effect of additives on mechanical behavior. Real life design examples are used to demonstrate the topics and concepts as much as possible.

PLAS.4040 Process Control  (Formerly 26.404) - Credits: 3

Basic principles of control systems used with plastics processing equipment. Included are instrumentation, signal conditioning, data acquisition, feedback control, process monitoring, data reduction, and SPC/SQC. Meets Core Curriculum Essential Learning Outcome for Critical Thinking &Problem Solving (CTPS) and Written &Oral Communication (WOC).

PLAS.4060 Polymer Structure, Properties and Applications  (Formerly 26.406) - Credits: 3

The fundamental relationships between molecular structure, properties and end-use applications of plastics materials will be explored in detail. Molecular structural features include chemical composition, molecular size and flexibility, intermolecular order and bonding, and supermolecular structure. Properties include processability, mechanical, acoustic, thermal, electrical, optical and chemical properties, price, and balance of properties. Applications include rigid solids, flexible solids, foams, film and non-plastic applications.

PLAS.4100 Coop Assessment II  (Formerly 26.410) - Credits: 2

This seminar is designed to support and assist students in the continued assessment of their cooperative education experience. Through a deepening of their work in Co-op assessment 1, students well review their overall performance in the cooperative education program, while continuing to demonstrate their technical and professional skills through written work and public presentations to multiple audiences. It is expected that students will clearly define their future academic and career goals, enhance their professional networks, and develop a future plan to support aspirations related to their major.

PLAS.4150 Capstone Project I  (Formerly 26.415) - Credits: 1

First half of a two-semester capstone experience. Students, working in teams under the supervision of faculty members, select a project related to the field of plastics engineering, prepare a project charter considering constraints and mitigations, conduct experimental research, and propose potential project solutions.

PLAS.4160 Capstone Project II  (Formerly 26.416) - Credits: 1

Second half of a two-semester capstone experience. Students, working in teams under the supervision of faculty members, continue a project related to the field of plastics engineering, implement one or more project solutions, conduct experimental research, author a final report, and provide a presentation according to professional conference guidelines.

PLAS.4170 Honors Capstone Project II  (Formerly 26.417) - Credits: 1-3

A section of capstone laboratory for honor students only. Honors student groups design, perform, analyze, report and defend a research project which incorporates the processing and characterization of plastics materials. Supporting practicum on literature searches, plastics processing, basic plastics testing techniques, and data analysis are included in the course.

PLAS.4180 Product and Process Design  (Formerly 26.418) - Credits: 3

Theoretical principles and engineering practices for development of new plastic products with a focus on conventional and advanced injection molding processes. Topics include design methodology, plastic materials selection, design for manufacturing, computer aided engineering, mechanical
behavior of plastics, structural design of plastic parts, prototyping techniques, experimental stress analysis, assembly techniques for plastic parts, and design for recyclability.

PLAS.4200 Co-op Assessment 2 (6 months) - Credits: 2

This seminar is designed to support and assist students in the assessment of their second cooperative education work experience that was for a 6 month cycle. Students will reflect on their extended time in this second work environment, and how their two different co-op work experiences impacts their subsequent decisions for career development. Students will review their overall performance in the cooperative education program, and demonstrate their technical and professional skills through written work and public presentations to multiple audiences.

PLAS.4500 Nanoscale Trans. Phenomena for Manuf. Nanodevices (Formerly 10/22/26.450) - Credits: 3

An interdisciplinary course taught by faculty from the Chemical, Mechanical and Plastics Engineering Departments, who have special knowledge in nanoscale fluid mechanics and heat transfer. The course on nanoscale transport phenomena constitutes a bridge between existing fluid and heat transfer courses in multiple disciplines and emerging nanoscale science and engineering concepts to reflect the forefront of nanomanufacturing. The course is designed to incorporate recent advances in manufacturing polymer based nanodevices. Key issues of the implementation and maintenance costs for fabrication will be addressed. Hands-on laboratory experiments will be performed to complement the lectures with the ultimate goal of designing and building a complete nanodevice at the end of the course. The course will prepare graduates for employment focused on designing and manufacturing nano/microfluidic systems, lab on chip devices, electronic devices, medical devices and other emerging technologies.

PTEC.2010 Plastics Material Science I (Commodity Thermoplast) - Credits: 3

Serves as an introductory course reviewing the history, classification, definitions and terminology, raw materials, methods of manufacturing, testing-characterization of typical physical properties, and end-uses of polymeric materials systems. Emphasis will be on the commodity thermoplastics, polyolefins, vinyls and styrenics.

Degree Pathways are a sample semester-by-semester sequence of courses which might be followed for successful completion of a degree, diploma, credential or certificate from the university. Students should follow the degree pathway appropriate to their catalog year. A student's catalog year is typically defined by the date of their entry into the University of Massachusetts Lowell.

Total Minimum Credits = 120

1Required for entering freshmen.

2Quantitative Literacy (QL) is fulfilled outside the American Studies major. The department recommends that all majors take a math course that satisfies the QL outcome, such as MATH 1110.

3American Studies students meet the Core Curriculum Essential Learning Outcome for Critical Thinking and Problem Solving (CTPS) outside of the major. CTPS may be satisfied with PHIL.2010 (https://www.uml.edu/catalog/courses/PHIL/2010) Introduction to Philosophy or PHIL.2020 (https://www.uml.edu/catalog/courses/PHIL/2020) Introduction to Logic and Critical Reasoning. Additionally, the following Research Seminars satisfy CTPS (some have prerequisite courses):

- HIST.4320 (https://www.uml.edu/catalog/courses/HIST/4320) Research Seminar
- PSYC.3750 (https://www.uml.edu/catalog/courses/PSYC/3750) Research III: Laboratory
- SOCI.4030 (https://www.uml.edu/catalog/courses/SOCI/4030) Research II: Qualitative Methods

See the CTPS course listing (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for a complete list of options.

4World Ready Language Track (WR track) requires successful completion of a two course sequence in a World Language (depending on placement) and three approved courses on the culture/history/literature/film related to that language, but taught in English. (Total of 15 credits.) For detailed information refer to Policies - Language Requirements (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) in the undergraduate catalog.

5Students may take Research Methods in any of the following subjects: english, history, political science, psychology, or sociology.

6To satisfy the Thematic Electives requirement, students choose two disciplines to explore, taking a total of 15 credits (12 must be at the 3000/4000 level), with at least six credits from each discipline. A list of approved courses is available through the student's SIS (http://www.uml.edu/Enrollment/sis/default.aspx) account or from the coordinator.

Students must take 36-45 credits within the major, with at least 15 credits at the 3000 or 4000 level.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) policy for further details. You should meet with your faculty advisor to determine how you will meet the Core Curriculum requirements.

Current UMass Lowell students should use their Advisement Report in SIS (http://www.uml.edu/Enrollment/sis/default.aspx). If you need assistance, please contact your advisor.

Restriction on off-campus study:

Be advised that any course taken at another institution must be formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the catalog policy (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

Last updated: 6/30/2021
AMST.2480 Perspectives American Culture
(Formerly 40/42.248) - Credits: 3

The goal of this class is to enhance students' ability to read and interpret American texts by learning how to see them in context, to understand the way readers approach texts from interpretative lenses, and to express their insights about American culture in a variety of forms and genres. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA) and Social Responsibility & Ethics (SRE).

AMST.2570 The Family in American Literature
(Formerly 40.257) - Credits: 3

A study of literary selections dealing with traditions of family life, the individual, and social change. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

AMST.2740 Literature of Beat Movement (Formerly 40.274) - Credits: 3

A survey of fiction and poetry by Beat Movement authors, including Lowell native Jack Kerouac, Allen Ginsberg, William Burroughs, Herbert Huncke, Gregory Corso, and Lawrence Ferlinghetti

AMST.3110 South in American Literature (Formerly 40.311) - Credits: 3

AMST.4010 American Studies Seminar (Formerly 40.401) - Credits: 3

A required seminar for American studies majors normally taken during the second semester of the junior year or during the senior year. Students undertake a research project leading to the writing of a major paper with a theme that combines more than one discipline.

AMST.4910 Directed Studies in American Studies
(Formerly 40.491) - Credits: 1-3

An investigation of a topic using an interdisciplinary approach and leading to the writing of a major paper. The course provides an opportunity for a student to work closely with an instructor on a topic of special interest.

AMST.4960 Practicum Experience in American Studies
(Formerly 40.496) - Credits: 3

Allows students an opportunity to combine their formal education with an off campus project. After developing a proposal for the practicum under the guidance of an instructor, the student spends a portion of his or her time working with persons engaged in business, the arts, museums, the professions, community service, or government. The coordinator for American studies maintains a file of organizations that accept students.

AMST.4970 Practicum in American Studies
(Formerly 40.497) - Credits: 1-3

GRADUATE – ALL COLLEGES

GRADUATE – ALL COLLEGES
College of Fine Arts, Humanities & Social Sciences

Degree Pathways are a sample semester-by-semester sequence of courses which might be followed for successful completion of a degree, diploma, credential or certificate from the university. Students should follow the degree pathway appropriate to their catalog year. A student's catalog year is typically defined by the date of their entry into the University of Massachusetts Lowell.

**Total Minimum Credits = 123**

1Quantitative Literacy (QL) is fulfilled outside the Art Department requirements. The department recommends that all majors take Math.1110 which fulfills both the Math Breadth of Knowledge requirement and the Quantitative Literacy ELO. See QL course listing (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for a full list of classes that fulfill this requirement. Art students may also satisfy QL by taking ARTS.3820 (https://www.uml.edu/catalog/courses/ARTS/3820)Art &Design of Data Visualization as a concentration elective. (This course is taught biaannually).

2Art &Design Electives:

- ARTS.2320 (https://www.uml.edu/catalog/courses/ARTS/2320) Ceramics I
- ARTS.2350 (https://www.uml.edu/catalog/courses/ARTS/2350) Sculpture I
- ARTS.2420 (https://www.uml.edu/catalog/courses/ARTS/2420) Language of Video
- ARTS.2570 (https://www.uml.edu/catalog/courses/ARTS/2570) Monotypes
- ARTS.2590 (https://www.uml.edu/catalog/courses/ARTS/2590) Papermaking
- ARTS.2670 (https://www.uml.edu/catalog/courses/ARTS/2670) Printmaking
- ARTS.2710 (https://www.uml.edu/catalog/courses/ARTS/2710) Painting I
- ARTS.2720 (https://www.uml.edu/catalog/courses/ARTS/2720) 2D Animation I
- ARTS.2730 (https://www.uml.edu/catalog/courses/ARTS/2730) Watercolor
- ARTS.2741 (https://www.uml.edu/catalog/courses/ARTS/2741) Storyboarding and Comics
- ARTS.2760 (https://www.uml.edu/catalog/courses/ARTS/2760) Introduction to 3D Modeling and Animation
- ARTS.2770 (https://www.uml.edu/catalog/courses/ARTS/2770) Computer Aided Design and Animation
Additional Requirements

- All students who are admitted to the BFA in Graphic Design must pass a degree milestone at the end of the second year to continue in the major. Students should create a body of work displayed in a portfolio with eight pieces of Graphic Design work from their Graphic Design II and Typography II classes to be reviewed by a faculty panel. The faculty panel will give feedback to students to help them determine the correct course path. Students at this time may be advised to move to a different degree program.

- All designers are expected to maintain a 2.5 cumulative GPA. Students who are not able to consistently maintain
this GPA could be required to change their major. Students should consult with the Graphic Design coordinator to discuss their ability to be successful in completing this degree or moving to an alternative program.

- Transfer students who intend to apply directly to pass the requirements for BFA in Graphic Design must meet with the Graphic Design coordinator for review of their transcript and portfolio. All course requirements must be satisfied in order for a student to be eligible for admission to the BFA Graphic Design professional program.

Current UMass Lowell students should use their Advisement Report in SIS (https://www.uml.edu/Enrollment/SiS/default.aspx). If you need assistance, please contact your advisor.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) policy for further details. You should meet with your faculty advisor to determine how you will meet the Core Curriculum requirements.

**Restriction on off-campus study:**

Be advised that any course taken at another institution must be formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the catalog policy (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

_Last updated: 4/07/2021_
AEST.2210 20th Century Art (Formerly 79.221) - Credits: 3

A study of American and European movements in painting, sculpture, and architecture from 1900 to the present. Emphasis is placed on Fauvism, Cubism, Expressionism, Surrealism, International Style, Pop, Op Art, Minimal Art, Photorealism, and Post-Modernism.

AEST.2250 History of Photography (Formerly 79.225) - Credits: 3

Less than 200 years old, photography seems to span millennia. With 1839 as the invention's launch date, there is no photograph of George Washington, but very soon we are flooded with the faces of composers, painters, and presidents: we know and are reminded of the ravages of civil and world wars, industrial progress and social injustice, or the beauty of pristine landscapes and their ecological demise. In this course, students will become familiar with some 100 notable photographers, from the beginning years of its invention to contemporary times with works by major artists and forgotten visionaries, all serving as a foundation for inspiration and understanding of the art worlds most visible medium. Grading in the course is based on a mid-term and final exam along with a major research paper.

AEST.2310 Aesthetics and Critical Studies Seminar (Formerly 79.231/490) - Credits: 3

The Aesthetics and Critical Studies Seminar introduces a wide variety of artists, designers, images, concepts, movements and theories. The objective of this course is to improve critical awareness and provide a theoretical background to art and design studio courses. Topics to be announced. Course may be repeated.

AEST.2410 Art Serving Political, Religious, & Social Needs (Formerly 79.241) - Credits: 3

The objectives are to study the production of meaning in paintings and frescos, sculpture, stained glass, architecture and other art forms that were commissioned through the church and state patronage system; to analyze how these images are used to represent and define social order; how these images support the patron's interpretation of history while appealing to aesthetic needs; and ways in which art supported the educational and evangelical aims of church and state. The course will introduce students to the visual and critical language of art produced at this time and analyze works in the context of contemporary history. The thematic focus of this class is designed for Italian cultural studies. No knowledge of Italian is required.

AEST.2800 From Collective to Personal Aesthetics (Formerly 79.280) - Credits: 3

This course is an exploration in aesthetics and culture. The seminar examines a variety of works by contemporary artists and designers; and also introduces important texts by philosophers, art theorists, and critics. Throughout the semester, student will study current trends in visual studies. They will examine a range of works form popular culture to high art and respond to various readings through class discussions and papers. In addition, the course will facilitate intellectual engagement with one's own visual work. Through their research, student will explore the connections between their work and that of other artists and designers. They will situate their artwork within the field of criticism, creating a bridge across the traditional divide between theory and practice.

AEST.3600 Aesthetics and Critical Studies of Graphic Design (Formerly 79.360) - Credits: 3

Examination of the aesthetic theories and practice of graphic design. Significant practitioners of the art will be highlighted.

AEST.3620 Post-digital Aesthetics - Credits: 3

Post-digital Aesthetics explores art after the digital revolution focusing on critical analysis of digital images and environments. We will study how digital technology has transformed art making and also how it impacts the very definition of art. The blurring of boundaries between art, life and design is more than ever evident as human experiences are increasingly mediated through technological devices and high-quality design. The internet has dramatically altered how and why we make art while virtual presence and embodiment in VR bring unprecedented questions about the role of artists and designers in our understanding of the world. This course will be taught as a face-to-face seminar. However, we will also travel beyond the classroom walls into virtual worlds and environments.

AEST.3623 Politics and a photograph - Credits: 3

The course will examine the existing discourses around photography’s role in important individual social and cultural issues. Through lectures, readings, discussions, writing, and creative projects we will explore the medium as inherently political. In the studio portion of the class, students will focus on producing a self-defined body of work that will explore the political dimension of photographic images. Students are expected to be active participants in the course by producing photographic projects, participating in class discussions, and looking and thinking about images and texts beyond those offered in class.
AEST.3700 Strategies of Visual Dissent - Credits: 3
This course will study visual modes of social & political dissent. As an art and design history course, we will examine cases of social, legal, cultural repression and the methods used to successfully change those realities. This course focuses on examples of ethical, non-violent, social intervention, education, and calls for action. We will look at history, identify current areas of social concern, study the issues, and create artwork, design, and engagement strategies.

AEST.3800 Understanding Movies: Cinema as Social Commentary (Formerly 79.380) - Credits: 3
This film theory seminar has several main objectives: to study the production of meaning in films; to analyze how moving images are used in social representation; and to introduce students to the visual and critical language of cinema. In this course, we will view a series of films by international authors. These address some of the most pressing issues of today’s global world such as identity, subjectivity, difference and otherness, race relations, representations of gender and sexuality, immigration, war, colonialism and post-colonialism, poverty, and social inequalities. The films that we watch will be studied not as isolated cinematic texts but as illustrations and examples of theories of representation. Students will develop their critical analysis skills by being introduced to theoretical concepts such as "the gaze" in art and cinema as well as formal elements such as mise-en-scene, cinematography, editing, and sound.

AEST.4900 Aesthetics and Critical Studies Seminar (Formerly 79.231/490) - Credits: 3
The Aesthetics and Critical Studies Seminar introduces a wide variety of artists, designers, images, concepts, movements and theories. The objective of this course is to improve critical awareness and provide a theoretical background to art and design studio courses. Topics to be announced. Course may be repeated.

AEST.4940 Directed Study in Aesthetic Concepts (Formerly 79.494) - Credits: 3
An individual supervised research project relating to questions of aesthetic interpretation and understandings. Fall and Spring.

AEST.4960 Practicum Experience in Aesthetic Concepts (Formerly 79.496) - Credits: 3
A program of on-campus and/or off-campus experiences for art majors only. Specific requirements will vary depending upon department policies and the nature of the program undertaken by the student. The intent of the practicum experience is to provide an occasion for investigation of a community, social, cultural or artistic area and for applying techniques of problem solving and/or credits. Students will be graded "satisfactory" or "unsatisfactory". Fall and Spring.

ARTS.1010 Art Concepts I (formerly 70.101) - Credits: 3
Art Concepts I will focus on learning the visual language of the creative process through an examination of the principles of two-dimensional visual organization. These fundamental basics form the underlying structure of all studio and communication arts. Through slide lecture, guest lecturers, field trips, and studio projects, students will begin to understand the many forms that visual expression takes. The course will develop creative problem solving skills and students will learn to respond to personal challenge. Students will also be instructed in the principles of professional execution and be introduced to diverse modes of thought, media, and aesthetic expression. Meets Core Curriculum Essential Learning Outcome for Critical Thinking & Problem Solving (CTPS).

ARTS.1020 Art Concepts II (formerly 70.102) - Credits: 3
Art Concepts II will focus on learning the visual language of the creative process through an examination of the principles of three-dimensional visual organization. These fundamental basics form the underlying structure of architecture, environmental graphic design, product design and sculpture. Through slide lecture, guest lecturers, field trips, and studio projects, students will begin to understand the many forms that three dimensional expression takes. The course will develop creative problem solving skills and students will learn to respond to personal challenge. Students will also be instructed in the principles of professional execution and be introduced to diverse modes of thought, media, and aesthetic expression. Art majors only. Fall and Spring.

ARTS.1130 Digital Foundations (Formerly 70.113) - Credits: 3
This course explores the computer as a tool of the visual language. Topics included are raster and vector-based image making, art for the internet & mobile devices, and current image capture and output methods. This course will introduce Photoshop, Illustrator, Flash and a basic programming with the aim of expanding the artist’s toolkit. Lectures, readings, and discussions will provide an overview of history and contemporary ideas on the use of computers in art. Meets Core Curriculum Essential Learning Outcome for Information Literacy (IL).

ARTS.1140 The Creative Process (formerly 70.114) -
Credits: 3
This course explores the relationship between the creative process, self-expression and communication, through the visual arts. The creative process is first explored broadly as a problem-solving tool applicable to all fields of human endeavor. The student then experiences the creative process in studio explorations and the creation of art works with an emphasis on process rather than product with the goal of broadening the basis for student self confidence in creative skill development, originality, critical thinking/writing, the use of information technology resources, and appreciation of the visual arts as a powerful vehicle for communication.

ARTS.1150 Drawing for Non-Art Majors - Credits: 3
This introductory drawing course is intended for students with little or no drawing experience. It is a studio art course involving the learner in a hands-on approach to basic drawing and composition. Learners explore, comprehend, and employ the basic elements and principles of art, use various graphic media and become familiar with the vocabulary, concepts and techniques of drawing.

ARTS.1160 Graphic Design for Non-Majors - Credits: 3
In this course, non-major students with an interest in Graphic Design will be introduced to design and typography fundamentals and how they apply to both print and screen-based media. In a variety of assignments, students will learn design process, image-making and layout, writing and responding to a client brief, including brand identity creation and a social awareness project. They will work with the Adobe Creative Cloud programs Illustrator, Photoshop and Indesign and be able to execute their designs using the appropriate software. This class will meet once a week for 3 hours.

ARTS.1350 Kinetic Projects (Formerly 70.135) - Credits: 3
Kinetic Projects is a hybrid course designed for a variety of majors to explore the intersections between mechanical engineering and sculpture. In this project-driven class, students will learn principles and practice in both the fields of engineering and art, and put them into practice by creating functioning kinetic objects to be displayed in a public setting. The course will also include guest lectures from practitioners in Art and Engineering. The course provides an introduction to technical communications, teamwork, data analysis, computer coding, computer-aided drafting/design/modeling program usage, prototyping techniques, report-writing and /or oral presentation.

ARTS.1550 Drawing I (formerly 70.155, 70.255) - Credits: 3
Provides a foundation in basic drawing concepts using a variety of media and approaches. The emphasis is on building visual literacy and its application to the realm of ideas. A wide range of assignments are given to develop graphic expression.

ARTS.1560 Drawing II (Formerly 70.156, 70.256) - Credits: 3
The emphasis is on giving form to ideas through building a solid sense of visual literacy. Assignments include a wide range of color media, surface, and subject matter with the focus on the psychological and structural use of color, creative experimentation, and the development of personal style. Fall and spring.

ARTS.1610 Introduction to Photography (formerly 70.161) - Credits: 3
Photography for Non Majors. Students learn how to transform the three-dimensional world before their eyes into the two-dimensional world of photography utilizing the human invention of the lens and camera. They come to appreciate the role photography plays in composition, lighting, and concept creation. Does not count towards a BLA minor or a BFA degree. AH.

ARTS.2010 Form And Content (formerly 70.201) - Credits: 3
Form and Content is considered the capstone course of the Art Foundations Requirement. Through a variety of studio assignments and individual projects students will explore the integration of humanities related concepts and develop an understanding of how visual artists think, live and function in the twenty first century. As part of the course requirements students will participate in the foundations exhibition at the end of the semester. Art majors only. Fall and Spring.

ARTS.2100 Graphic Design I (Formerly 70.210) - Credits: 3
Exercises, lectures and projects will introduce students to graphic design principles and techniques. Course will begin with a fundamental study of image, form, and space relations, then cover such topics as working with grids, typography basics, page layout, the introduction of color, rendering techniques, denotative and connotative image making, history, and more. Students will be assigned a series of projects to enhance their visual communication skills. Students will be introduced to the software used in contemporary design practice. Students must earn a C+ or better in the course to continue in the Graphic Design BFA program.
ARTS.2200 Website Design I (formerly 70.220) - Credits: 3
This course will focus on the creation of visual content for the web and will explore what constitutes a visually exciting and engaging site. Other topics that will be covered are: file formats, compression, web color strategies, and platform standards. Basic familiarity with Mac OS and/or Windows platforms required.

ARTS.2210 Practicum/Internship (formerly 70.221) - Credits: 3
The Practicum/Internship is an on-campus or off-campus learning experience. Specific requirements will vary depending on department policies and the nature of the program undertaken by the student. The practicum experience is to provide an occasion for practical experience in an area of particular interest to the student.

ARTS.2300 Typography I (Formerly 70.230) - Credits: 3
This introductory typography course is for students interested in visual communication, type and its use. Students begin the semester working with a single letterform and numeral and end the semester researching and design and entire book. Proper typographic systems must be used including a detailed look at page layout software, creating grids, working with "style sheets" and the finer points of setting typography. We will also explore how to transfer these skills and concepts for use in screen-based media. This is a project based course which contains visual, written, and research components. Students will be introduced to the software used in contemporary design practice. Students must earn a C+ or better in this course to continue in the Graphic Design BFA program.

ARTS.2320 Ceramics I (formerly 70.232) - Credits: 3
Learn the basics of working with clay with a focus on traditional Khmer hand building and surface carving practices. Hand building techniques including slab construction, coil pinch, low relief carving, slip joinery, and additive processes to create vessels and sculptures will be covered as well as glazing, color, and traditional wood kiln firing processes. Students make sculptural and functional forms to fire in a Cambodian style environmentally green smokeless wood burning kiln. Course is suitable for both beginners and intermediate ceramists. This is a General Education elective in the arts & humanities.

ARTS.2350 Sculpture I (formerly 70.235) - Credits: 3
The exploration of three-dimensional form through the use of basic materials, methods and approaches. Assignments will include expressive problems based on human and non-objective form relationships. Spring.

ARTS.2330 Khmer Ceramics - Credits: 3
Learn the basics of working with clay with a focus on traditional Khmer hand building and surface carving practices. Hand building techniques including slab construction, coil pinch, low relief carving, slip joinery, and additive processes to create vessels and sculptures will be covered as well as glazing, color, and traditional wood kiln firing processes. Students make sculptural and functional forms to fire in a Cambodian style environmentally green smokeless wood burning kiln. Course is suitable for both beginners and intermediate ceramists. This is a General Education elective in the arts & humanities.

ARTS.2350 Sculpture I (formerly 70.235) - Credits: 3
The exploration of three-dimensional form through the use of basic materials, methods and approaches. Assignments will include expressive problems based on human and non-objective form relationships. Spring.

ARTS.2560 Drawing III (formerly 70.256) - Credits: 3
This advanced course in drawing is designed to help students develop the expressive and conceptual concerns of their drawing practice while developing their ability to work in an independent manner. Designed for students in all disciplines, the course will emphasize the development of strong research skills through the exploration of historical and contemporary modes of drawing. The class will be combination of studio work, presentations, and individual and group critiques. Critiques are designed to provide feedback and to encourage and nurture each students vision. Exploring a variety of drawing media, the ultimate goal of the course is the development of a visually coherent and conceptually unified body of work.

ARTS.2570 Monotypes (formerly 70.257) - Credits: 3
Exploration of the one-of-a-kind "painter's print ". Emphasis is on the development of personal expression through a variety of assignments and techniques. Three portfolios of prints are required, two with assigned topics, and one with a self-assigned theme. Fall, alternate years.

ARTS.2590 Papermaking (formerly 70.259) - Credits: 3
The papermaking course is designed to explore paper, not just as a surface to receive an image, but as a material capable of being an artistic expression in and of itself. The course will explore the processes and techniques of making images in...
handmade paper, making images on handmade paper, making visual designs out of handmade paper and casting handmade paper into three-dimensional sculptural forms. Spring, alternate years.

ARTS.2610 Photography I (formerly 70.261) - Credits: 3
A foundation course that covers the basic analogue and digital camera techniques, as well as aesthetic principles, Student learn to make, develop and print their own photographs.

ARTS.2620 Digital Imaging and Photography: Photoshop (formerly 70.262) - Credits: 3
This course will offer the student a transition between traditional photographic imaging and digital photographic imaging. The course will cover the fundamentals of digital scanning, digital capture and image manipulation. Image preparation for other media will also be explored. Basic familiarity with the Mac OS and/or Windows platforms required. 6 Contact Hours required for Day School students.

ARTS.2660 Alternative Photo Processing (formerly 70.266) - Credits: 3
Alternative Photo Processing give the serious photography student an opportunity to Learn historic and contemporary alternative processes such as Cyanotype, Van Dyke Brown, Kallitype, Palladium, and Image Transfers. Alternative methods of creating negatives utilizing photocopiery, inkjet printers, Clich Verre, and Acrylic Lifts will give student the opportunity to make handmade photographs with and without a camera.

ARTS.2670 Printmaking (formerly 70.267) - Credits: 3
An introduction to basic printmaking processes and aesthetics with the emphasis on etching. The approach is concept oriented, emphasizing experimentation and exploration on an individual level to communicate ideas. Fall.

ARTS.2690 Color (formerly 70.269) - Credits: 3
A course in the systematic study of color and color theory to sharpen visual acuity, stimulate creativity and develop a greater facility in the use of color.

ARTS.2700 Figure Drawing (formerly 70.270) - Credits: 3
The study of the draped and undraped figure from life, stressing both sound observation and the creative use of human form as a vehicle for personal expression. A variety of assignments, graphic media, and approaches will be given in order to help explore both philosophical and aesthetic issues. Fall, alternate years.

ARTS.2710 Painting I (formerly 70.271) - Credits: 3
Presents oil painting techniques as vehicles for serious creative expression. A variety of assignments will be given to help the student build proficiency in the use of color, paint handling, and subject matter.

ARTS.2720 2D Animation I (formerly 70.272) - Credits: 3
This course will provide students with the fundamental understanding about the process and the concepts in animation for narrative and experimental expression. Preproduction including scripting and storyboarding will be especially emphasized. Hybrid techniques in both traditional and digital animations including hand-drawing, stop-motion, rotoscoping, pixilation as well as tweening will be introduced. Static and kinetic aesthetics of moving images will be explored through the review of historic and contemporary animations, and through the production. Students from this course will make a much smoother transition to 3D animation courses, Language of Video, Interactive media as well as Web Design/Art. The course will also introduce the student to historical and contemporary perspectives related to the discipline.

ARTS.2730 Watercolor (formerly 70.273) - Credits: 3
The technical and creative use of water based media as they apply to fine arts and graphic design. Assignments in acrylic, gouache, watercolor, and ink are designed to stimulate independent thinking. A final self-assigned project is required.

ARTS.2741 Storyboarding and Comics (formerly 70.274) - Credits: 3
This course focuses on applying industry-standard storyboarding and storytelling techniques to animation. Contents to be covered include the various purposes and formats of storyboards, the basic terminology and concepts used in storyboarding, and the application of storyboarding techniques to the creation of storyboards with or without a written script.

ARTS.2760 3D Modeling and Animation I (formerly 70.276) - Credits: 3
This course will focus mainly on the forms, materials, and composition of 3D computer graphics in the various environments. Students will explore the possibility of 3D computer graphics for creative expression as well as innovative visual communications such as animation, game, sculpture,
print and design. Rendering, lighting and camera as well as material and texturing techniques will be also explored. The course will also introduce the student to historical and contemporary perspectives related to the discipline.

ARTS.2770 Compositing and Motion Graphics (formerly 70.277) - Credits: 3

Students in this course learn the concepts, techniques and vocabulary of compositing and motion graphics in animation using Adobe After Effects. Students will produce animated videos, motion graphics and montages integrating image manipulation applications and other image processing support.

ARTS.2780 Interactive Media (formerly 70.278) - Credits: 3

This course provides students with the ability to create interactive motion graphics for Multimedia projects using Adobe Flash and Adobe After Effects. Students learn how to make sophisticated vector and pixel based graphics with basic action scripting and a variety of interactive graphic elements as well as compositing, editing, character rigging, effects for digital media and animation.

ARTS.2900 Illustration I (formerly 70.290) - Credits: 3

This course will provide students with an understanding of the creative, visual and formal aspects of the applied art of illustration. Project challenges will be based on several real-world applications of illustration in a variety of genres including editorial, sequential narrative, portrait, nature and product application. The course includes an introduction to different illustration media, the stages and process of creating illustrations and learning about both contemporary and historic illustrators. They will be encouraged to develop unique thinking and conceptual approaches as they hone their artistic voice. Students will learn to communicate ideas and develop content through research, discussion, sketching, critique and creating.

ARTS.2950 Studio Workshop Abroad (formerly 70.295) - Credits: 3

In this course students will make a portfolio of small works and take them abroad to exhibit internationally. While on tour, participants will create further works by interaction with their surroundings, take visual notes, and collect items to broaden artistic practice upon return home. Participants are to generate work that develops their own artistic voice, explores and expresses their visions open to the surrounding foreign cultural influences. As this course takes place largely abroad, the unique challenges of interpreting culture, representing profound experience, and learning from a mix of ancient and modern sources will frame artistic investigations.

ARTS.2951 BioArt Workshop in Portugal - Credits: 3

This is an interdisciplinary course that combines art and science a Cultivamos Cultural in San Luis Portugal. The intersection of Art, Biology and the Environment offer unique opportunities to visual artists. This innovative summer course, which is already on its fourth edition, will allow non-specialists to acquire theoretical and practical skills in biological and environmental sciences in connection to the visual arts. The Summer School explores the interdisciplinary relationship between art, line and environmental sciences through hands-on exercises, combining theory and practice in an informal environment, e.g.: seminars, debates, visits, and the creation of artworks with biological media.

ARTS.2960 Character and Layout Design (formerly 70.296) - Credits: 3

This course is designed for students to understand the fundamentals of character and layout design for Animation. Students will focus on rendering life forms in space. Emphasis will be placed on the anatomical structure of characters as well as compositing, editing, character rigging, effects for layout and background design will be covered in this course as well. Students will also learn the basics of using props a background and foreground design elements.

ARTS.2970 Studio Workshop (formerly 70.297) - Credits: 3

Presents a study of studio problems in visual structures and organization, as well as an exploration of various media and techniques. Topics will vary. This course may be repeated.

ARTS.2980 Book Arts (formerly 70.298) - Credits: 3

Book Arts will engage students in the design and fabrication of handmade, one-of-a-kind artists books. A wide variety of material and processes will be investigated. Students will learn how to produce compelling book structures for visual and graphic content. The course will introduce students to the history of Eastern and Western methods of bookmaking as well as the contemporary practice of one-of-a kind conceptual artists books. The three-dimensional possibilities of bookmaking will also be explored.

ARTS.3100 Graphic Design II (formerly 70.310) - Credits: 3

Students will continue improving their visual communication skills, and develop their ability to take a project to its final
stage and render it as a professional portfolio piece. In a variety of print, screen-based, interactive, and time-based projects, students will be expected to conceive inventive, conceptual solutions to design problems. Building on design fundamentals, students are encouraged to maintain consistent, sophisticated design systems and explore various types of image-making. While strengthening their technical proficiency and design process, students will learn to apply concepts to multi-format project deliverables. Common projects include brand identity systems, dat visualization, publication design, poster design, packaging, design for screens, and motion design. Students must earn a C+ or better in this course to continue in the Graphic Design BFA program.

ARTS.3150 Packaging and Point of Purchase - Credits: 3

This course explores design in a physically three-dimensional space, such as packaging and environmental graphics. Through multiple projects students learn packaging systems, the billboard effect and how designs live and interact in their physical space. Improving form, industrial design and sustainability are challenges this course will explore. This course expands to touch on printing techniques and constraints, die lines and conceptual design beyond the screen.

ARTS.3200 Web Design II (formerly 70.320) - Credits: 3

This advanced-level course is designed for students who have completed Website Development (90.238) and Website Design (70.379). The course will cover advanced topics such as user-centered design, information architecture, testing, and usage analysis. Students will have the opportunity to further develop their design, development, and conceptualization skills.

ARTS.3300 Typography II (formerly 70.330) - Credits: 3

Continuation of 70.230

ARTS.3320 Ceramics II (formerly 70.322) - Credits: 3

Building on Ceramics I as an introductory course, Ceramics II will ask the student to explore functional and nonfunctional ceramic form. Students will be expected to challenge themselves with scale, advanced glaze methods and they will become familiar with kiln firings. Historical and contemporary issues in ceramics will be covered through lectures, slide presentations and critiques.

ARTS.3350 Sculpture II (formerly 70.335) - Credits: 3

A course allowing the student to further develop his or her techniques and understanding of sculptural form, leading to a more personal vocabulary. Conventional techniques will be extended to cover more contemporary materials and methods. Spring, alternate years.

ARTS.3610 Photography II (formerly 70.361) - Credits: 3

An advanced course in photography with focus on digital imaging that includes instruction in technique and vision. Emphasis will be on development of a cohesive body of work in photography.

ARTS.3670 Printmaking II (formerly 70.367) - Credits: 3

The course builds on the printmaking techniques and aesthetic issues explored in Printmaking and Monotypes, using advanced methods in relief, intaglio and silkscreen to further develop individual aesthetic and conceptual goals. Students will use studio work, critique, discussion, writing and research to explore cultural, conceptual and historical issues at the heart of printmaking. High levels of quality in imagery, increased technical proficiency and conceptual development are expected in the creation of work throughout the semester. Studio work is done during and outside of class time, along with image lectures, technical demonstrations and critique discussions.

ARTS.3710 Painting II (formerly 70.371) - Credits: 3

Designed to allow students to develop individual style and approach to content through a series of self-initiated paintings. Students will work closely with the instructor to develop a cohesive series that has a sound philosophical and aesthetic basis. Spring, alternate years.

ARTS.3711 Place: A Visual Exploration of Lowell (formerly ARTS.2711) - Credits: 3

This studio course is designed for students who have an interest in making images to explore the concept of "place", using the landscape of Lowell as a creative resource. Open to all university students, the course is structured for students who are new to the arts as well as students who have previous studio art experience. Drawing upon the unique features of the particular landscape that is the city of Lowell, students will build a body of images that is a response to the geographical and cultural histories evident in the city's physical attributes. From its history as the center of industry and textile design to the present day, the city will be viewed as raw material for the conceptual foundation of the work produced in this course. (Class will meet both on and off-campus.)

ARTS.3730 Professional Photography (formerly 70.373) - Credits: 3
ARTS.3740 Animation Studio (formerly 70.374) - Credits: 3

This course focuses on applying industry-standard storyboarding, character and layout design and scripting techniques to animation. Contents to be covered include the various purposes and formats of storyboards, the basic terminology and concepts used in production, and the application of production techniques to the creation of animated films with or without a written script and the production process of an animated film from Idea to execution of complete film.

ARTS.3760 3D Modeling and Animation II (formerly 70.376) - Credits: 3

Students will learn the fundamentals of computer generated 3D modeling and animation. The emphasis will be on 3D character creation and the fundamental process of animation production including: concept development, organic modeling, rigging, posing, character animation, rendering and post-production. The course will also introduce the student to historical and contemporary perspectives related to the discipline. Various independent short animations will be screened for aesthetic and critical inquiry with the lectures dedicated to production techniques. The course will also introduce the student to historical and contemporary perspectives related to the discipline.

ARTS.3765 Adaptive Devices for Better Life - Credits: 3

In this interdisciplinary course, students and professors from Art and Design and Physical Therapy and Kinesiology will collaborate with a hospital partner to create adaptive devices to improve the lives of children with disabilities. Students will work in small, interdisciplinary teams to invent devices to better facilitate the daily activities of children with disabilities, such as customized spoons and creating VR wheel chair training. Class time will consist of demonstrations, studio/production, visits to the hospital for testing and consultation, and final presentation to patients, therapists, and potential investors. Numerous production work flows, including 3D modeling, 3D scanning, 3D printing, VR sculpting, and physical object making with various materials will be utilized.

ARTS.3770 2D Animation II (formerly 70.377) - Credits: 3

This course focuses on applying industry-standard storyboarding, character and layout design and scripting techniques to animation. Contents to be covered include the various purposes and formats of storyboards, the basic terminology and concepts used in production, and the application of production techniques to the creation of animated films with or without a written script and the production process of an animated film from Idea to execution of complete film.
sizes. Elements of typographic design, layout, and color theory will be used to sharpen communication and make projects accessible. The theory of information visualization will be balanced with hands on use of proprietary and open source tools including Adobe, Spreadsheets, and scripting (e.g. JavaScript).

ARTS.3950 Advertising Design Studio (formerly 70.395) - Credits: 3

This course introduces the components and principles of advertising design. Students will learn to develop strategic approaches to creating compelling ad campaigns for print and cross platform related media as they gain an understanding of the synergy between art and copy. The course covers how to write effective creative briefs, create storyboards, use social media, make engaging presentations and work as part of a team. Projects include both product, service and social campaigns, a unique self-promo piece, and working with real clients. In addition, students will learn how to negotiate and communicate in the advertising field with respectful and empowering language.

ARTS.3970 Art and Copy (formerly 70.397) - Credits: 3

The real world of advertising incorporates selling words and memorable images in a dynamic visual/verbal design unit. As copywriters and art directors, students learn to think pictures and see words as they prepare advertising campaign concepts for a variety of products and media, including print and television. Spring, alternate years.

ARTS.3980 Documentary Image (formerly 70.398) - Credits: 3

In a world of increasing manipulation, documentary photographs still astound us with their visual truths. In this course, students will utilize words and images "the primary tools of the photojournalist " to explore the significant issues of our time. Works by Fenton, O'Sullivan, Gardner, Riis, Hine, Bourke-White, Lange, Smith, Davidson, Salgado, Mark and others are studied for content, style, and inspiration. Fall, alternate years.

ARTS.3982 Study Abroad / Photography in the Azores - Credits: 3

A photograph as a witness is the primary concern of this course. The meaning of any photograph is determined by several cultural, social, and historical contexts. This class explores theses issues through visits to local Azorean communities and with a trip to the Azores. Photographers are bound by an invisible social contract of either reaffirming or questioning the world surrounding them. During this course, students will consider the mythologies of hierarchy and objectivity permeating the concept of documentary photography. Social engagement through work with the local community will be a large component of this course.

ARTS.4100 Graphic Design III (formerly 70.410) - Credits: 3

Students will drive their own content creation to solve visual, conceptual and technical problems through independently and collaboratively-generated analysis, evaluation, and refinement. Through research, they will create an extensive multi-part project that addresses communication design (audience, messaging, interaction/experience) and representation of an idea across multiple elements in a system. The visual strategy should explore a brand language and system, and be applied to print and screen-based deliverables including, but not limited to: brand identity guidelines, packaging, website/app, print and social media advertising, and promotional motion graphics. They will write about and document their process throughout, and present final work in a professional presentation. Students must earn a C+ or better in this course to continue in the Graphic Design BFA program.

ARTS.4110 Design In Motion (formerly 70.411) - Credits: 3

The course aims to provide students with an understanding of the creative, visual and formal aspects of time based communication and motion graphic design from both a contextual and technical point of view. Designers, with their comprehension of the principles of graphic design, typography and theories of visual communication will develop a knowledge and understanding of processes and techniques involved in creating time-based media including title sequence design. Projects introduce students to time-based visual communication environments. Unique conditions influencing the roles of storyboarding, planning, typography, graphics, symbolic systems, narrative, sound and time.

ARTS.4150 Advanced Graphic Design Exploration - Credits: 3

This advanced graphic design studio elective encourages students to question the purpose of graphic design in the context of our current world, parallel existences, and possible futures. Drawing from historical and contemporary design influences, they will develop a personal methodology to form making. Building upon their fundamental knowledge of design, they will explore and test current skills and technology (use of online and digital solutions such as AR, motion and web). Using critical theory and research, they will consider their future roles in the industry and speculate and design for fictional or possible scenarios. The course aims to push
students’ traditional problem-solving, consider the role of authorship of designed content, and develop conceptual, critical approaches to design.

ARTS.4200 Web Design III (formerly 70.420) - Credits: 3

This course introduces students to the problems and solutions of advanced web design and development. It reviews the best web applications and practices for designing cutting edge websites. Students will get familiarized with the process of students to working with clients. Students will learn how to use version control software to track their design and development, manage assets, and work within a team. The course will further explore the relevant cultural and historical context of web design and prepare students for navigating the rapid changes inherent in the field.

ARTS.4300 Typography III (Formerly 70.340) - Credits: 3

Typography III is a course in typographic theory and practice. This is a project based course, which includes a visual, research and writing component. During this course students, will create at least two grid systems and use them as primary units of organization. Students will apply typographic systems and basic interaction principles to two complex, text/image structures: a book and a series of web pages. Through readings, lectures and projects/critiques, you will be introduced to various theoretical approaches to the typographic page, as well as various approaches to designing interactive structures (book, web page/site) that hold and present typographic content. Students must earn a C+ or better in this course to continue in the Graphic Design BFA program.

ARTS.4310 Publication Design - Credits: 3

This is a book design course. using the typographic knowledge acquired in Typography I and Typography II, students will explore 3 forms of book design (traditional, digital, handmade) + 3 types of content (fiction, non-fiction, call-to-action).

ARTS.4350 Sculpture III (formerly 70.435) - Credits: 3

Sculpture III will allow students with a continued, special interest in three-dimensional media and installation art to find their personal visual voice and begin to develop a structured studio practice. Students will be asked to identify a conceptual theme for the semester that they will explore through research, development and execution in a series of installation works. The course will introduce and expand on contemporary media and methods not covered in Sculpture I and II. Verbal analysis and articulation of the final sculptural works will continue to be stressed.

ARTS.4550 Thought Made Visible - Credits: 3

This seminar based studio course is designed to enable students to expand their research in the painting and sculpture disciplines through focused individual investigation. The course will involve theoretical readings, lectures, and critiques associated with contemporary studio artist practices. Two of the primary objectives of the course are: (1) for students to broaden the conceptual foundation of their work while continuing to develop their personal direction and (2) to begin to think independently and be critical of their work beyond an assignment based pedagogy.

ARTS.4600 The Entrepreneurial Hustle for Creatives - Credits: 3

This course explores how students can advance and maintain sustainable creative careers with a combination of freelance clients, developing business and entrepreneurship opportunities, how to grants and how to the public request for proposals process. Through class presentations, discussions, research, and related assignments, this course provides an overview as of the components needed to be successful in today’s art market. Topics include the Artist and Designer as Entrepreneur, setting up our own business, Live/Work Income and Expenses, Reputation and Recognition, Goal Setting, Creating your own Opportunities, Specific Markets and Marketing skills, Legal &Contract Issues, and Fundraising.

ARTS.4610 Photography Workshop (formerly 70.461) - Credits: 3

An advanced course in photography that will blend seminar-style discussions and studio practice. An emphasis will be made on critical thinking, research and analysis alongside developing problem solving strategies that could be applied to creative practice. Students will produce a portfolio of creative work upon completion of the course.

ARTS.4710 Painting III (formerly 70.471) - Credits: 3

The focus of this class is to give individual students the opportunity to work in an independent manner, expand their ideas and develop the ability to articulate both conceptually and formally the needs of their own work. The class combines studio work, presentations, visiting lecturers and individual and group critiques, with an emphasis on understanding and embracing risk as a necessary component of a painter’s studio practice. Critiques are designed to provide feedback, encourage, challenge, and nurture each student’s vision. Assignments are given on an individual basis. Students are expected to support their work by research of both historical and contemporary art.

ARTS.4760 3D Animation II - Credits: 3
In this course, students will utilize industry standard 3D modeling and animation software to effectively animate 3D characters and bring them to life. With hands-on exercises and demonstrations, students will learn how to move 3D rigged characters using body mechanics, lip-synching animation, dialog between characters, acting, and motion capture technology.

ARTS.4811 Game Design II (formerly 70.381/ARTS.3811 Advanced Game Design) - Credits: 3

This advanced level course is designed for students who have completed Interactive Game Design and who are interested in exploring interactive game strategies and multilevel game design. Basic familiarity with Mac OS and/or Windows platforms required.

ARTS.4910 Advanced Studio (formerly 70.491) - Credits: 3

In order to enable students to expand expression in areas of their choice, they may repeat any studio course that is the most advanced offered in that given subject. They will be given more freedom within assignments and be expected to perform on a more advanced level.

ARTS.4920 Advanced Studio (formerly 70.492) - Credits: 3

In order to enable students to expand expression in areas of their choice, they may repeat any studio course that is the most advanced offered in that given subject. They will be given more freedom within assignments and be expected to perform on a more advanced level. Fall and Spring.

ARTS.4930 Senior Studio I (formerly 70.493) - Credits: 3

Senior Studio I is one of the two capstone courses of the Bachelor of Fine Arts program in the Art Department. Students are required to research, develop and produce a mature, coherent and substantial body of work representing 6 credits (in a two course sequence) that will be presented to the faculty for evaluation as well as exhibited to the public in the BFA Senior Studio exhibition. Enrollment restricted to majors in BFA program. Senior Studio I will focus on research, professional portfolio, resume and artist statement.

ARTS.4940 Directed Study (formerly 70.494) - Credits: 1-3

A special problem in studio art is investigated through

ARTS.4950 Advanced Tutorial (formerly 70.495) - Credits: 3

A program of directed studies which affords the advanced students an opportunity to pursue a previously explored problem in greater depth. The purpose is to sharpen and refine skill, content and presentation.

ARTS.4970 Senior Studio (formerly 70.497) - Credits: 6

This course is designed to culminate four years of art experience for the BFA studies. The development of personal approach to media and idea is emphasized. Each student will be responsible for developing a self-assigned thematic concern. No assignments will be made by the instructor who will act only as an advisor and coordinator. Course evaluation is by the Senior Studio Review Committee. Enrollment restricted to majors in BFA program. Fall and Spring. Meets Core Curriculum Essential Learning Outcome for Applied & Integrative Learning (AIL), Critical Thinking & Problem Solving (CTPS) and Information Literacy (IL).

ARTS.4980 Senior Studio II (formerly 70.498) - Credits: 3

Senior Studio II is one of the two capstone courses of the Bachelor of Fine Arts program in the Art Department. Students are required to research, develop and produce a mature, coherent and substantial body of work representing 6 credits (in a two course sequence) that will be presented to the faculty for evaluation as well as exhibited to the public in the BFA Senior Studio exhibition. Enrollment restricted to majors in BFA program. Senior Studio II will focus on research, capstone project presentation and a process book.
College of Fine Arts, Humanities & Social Sciences

Degree Pathways are a sample semester-by-semester sequence of courses which might be followed for successful completion of a degree, diploma, credential or certificate from the university. Students should follow the degree pathway appropriate to their catalog year. A students catalog year is typically defined by the date of their entry into the University of Massachusetts Lowell.

American Studies

- General Option
  fall 2015 and beyond

ARHI.1010 Art Appreciation (Formerly 58.101) - Credits: 3
The course introduces the student to the technical, aesthetic and historical aspects of architecture, sculpture, and painting. An analysis of the visual elements used in fine arts such as color, line, shape, texture, and principles of design are developed through slide lectures, museum visits and assigned readings. In addition, students investigate the purposes of art and visual communication and develop a heightened sense of critical thinking that allows them to investigate successfully different modes of representation, styles and media in a multicultural society.

ARHI.1050 Comparative Arts (Formerly 58.105) - Credits: 3
This course studies the aesthetic, artistic and intellectual similarities between art history and music history. Discussion of the arts focuses on the development in examining the human creativity and expression through the arts: from ancient times as art and morality followed in the Renaissance as art and sciences continued in the Enlightenment as art and society contrasted in the nineteenth century as art and entertainment. Furthermore, this course surveys some of the fundamental aspects of music and art, such as the nature of aesthetic judgment, the task of art and music criticism, including formalist, representational, and contemporary theories on viewing, analyzing, and interpreting the arts. In addition, with a comparative analysis between the modes of visual and aural representation, visual and aural perception, this course analyzes the principal forms and genres of the visual and aural elements of art history and music history, providing an understanding for human creativity and expression. Spring, alternate years.

ARHI.2030 History of Art I: Prehistoric to Medieval Art (Formerly 58.203) - Credits: 3
A survey of the origins of painting, sculpture, and architecture from the prehistoric period through approximately 1300 CE. Works of art are discussed in their historical, cultural, and artistic contexts.

ARHI.2040 History of Art II: Renaissance to Modern Art (Formerly 58.204) - Credits: 3
A survey of the origins and development of painting, sculpture, and architecture from Renaissance to the Modern period. Emphasis is placed on representative works of art from the Renaissance, Baroque, Rococo, Nineteenth Century Movements-Neoclassicism, Romanticism, Impressionism, Cubism, Dadaism, Surrealism and Abstract Art. The aim of the course is to introduce the student to basic critical and art historical methods as well as the analysis of style and content within sequential cultural contexts.

ARHI.2060 History of Architecture (Formerly 58.206) - Credits: 3
A survey of the major technical and stylistic developments in ecclesiastical and secular architecture from Prehistory to the present day studied with an emphasis on the major monuments (Parthenon, Pantheon, Gothic Cathedrals, St. Peter’s, Versailles Palace, Eiffel Tower, Guggenheim Museum). Spring, alternate years.

ARHI.2110 Nineteenth Century Art (Formerly 58.211) - Credits: 3
A study of the major artists and artistic movements of the 19th century. This course examines major cultural, social and political forces (e.g. class struggles, racial and gender inequalities, industrialization, scientific discoveries, emancipation, education reform, the influence of early "social media," etc.) through the lens of the visual arts and pays particular attention to how these forces impacted the way art was produced, viewed, and understood.

ARHI.2210 Twentieth Century Art (Formerly 58.221) - Credits: 3
A study of developments in painting, sculpture, performance, media arts, conceptual art, architecture, and design after 1900. This course encompasses modernisms in Europe, the Americas, Asia and the global south.

ARHI.2310 Greek and Roman Art (Formerly 58.231) - Credits: 3
A study of Greek painting, sculpture, and architecture from the Cycladic to the Hellenistic period, and an examination of Roman Art from the Etruscan age to the beginning of Christian art. Emphasis is placed on the Greek Classical period and the Roman Empire.

ARHI.3000 Art History, Music and Culture (Formerly 58.300) - Credits: 3
This course is a historical and critical examination of the aesthetic and intellectual similarities between art history, music history, literature and culture from Ancient Egypt to contemporary Art. Emphasis is placed on an in-depth exploration of western cultures. In addition, this course provides an understanding of human creativity and expression through a comparative analysis of visual art and music.
ARHI.3020 Studies In World Art (Formerly 58.302) - Credits: 3

Historical and critical examination of regions works of art from China, Asia, the Islamic world, India, Africa, North America, Latin America, Native American Art and Mexico. Topics vary from year to year. Course may be repeated.

ARHI.3130 American Art (Formerly 58.313) - Credits: 3

This course centers on the study of American painting, sculpture, and decorative arts from the period of first contact up through the mid-twentieth century. One of the central questions of American art remains its definition: when does it start? What sources does it draw upon? In this class we will discuss American art through its ties to the peoples, events, institutions, and landscape that shaped it.

ARHI.3140 American Architecture (Formerly 58.314) - Credits: 3

This course begins with a discussion of native American building traditions and proceeds chronologically from the 17th through the 20th centuries. Students will gain a familiarity with the major movements in American architecture (such as Colonial, Greek Revival, Victorian, Arts and Crafts, City Beautiful, International Style, Postmodern) as well as the leading architects such as Frank Lloyd Wright and Frank Gehry. The architecture is discussed in its historical context with attention to the inventions, materials and aesthetic assumptions that made it possible.

ARHI.3150 Modern Architecture (Formerly 58.315) - Credits: 3

A study of painting, sculpture, and architecture in the major artistic centers of Italy (Florence, Rome, Venice, Milan and the Northern Courts) during the 15th and 16th centuries. In addition to examining artworks by some of the most important artists of the period - Leonard da Vinci, Michelangelo, titan - this course considers larger themes raised by these works and gibes attention to the conditions within which the works were originally produced and viewed.

ARHI.3210 Italian Renaissance Art (Formerly 58.321) - Credits: 3

A study of painting, sculpture, and architecture in the major artistic centers of Italy (Florence, Rome, Venice, Milan and the Northern Courts) during the 15th and 16th centuries. In addition to examining artworks by some of the most important artists of the period - Leonard da Vinci, Michelangelo, titan - this course considers larger themes raised by these works and gibes attention to the conditions within which the works were originally produced and viewed.

ARHI.3230 Northern Renaissance Art (Formerly 58.323) - Credits: 3

A study of 15th and 16th century painting and sculpture north of the Alps including artists such as Jan van Eyck, Hieronymus Bosch, Jean Fouquet and Albrecht Drer. This course considers how social forces (politics, race, religion, gender etc.) influenced the manner in which Northern renaissance art was produced, viewed, and understood, as well as how these forces led to the creation of some of the most startling, strange and enigmatic images of any period in the history of art.

ARHI.3250 Studies in Latin American Art (Formerly 58.325) - Credits: 3

This course introduces students to Islamic art through a survey of works across the broad reach of the Islamic world including Saudi Arabia, Northern and Saharan Africa, Spain, the former Ottoman Empire surrounding Turkey and the Greater Middle East. The last unit of the course looks at Islamic art in the diaspora. The course highlights works form c. 500 CE to the present, ending with the ultra modern city of Dubai.

ARHI.3160 Architectural Utopias - Credits: 3

A study on the impact of the High Renaissance in the sixteenth can we build a better world? Many people from various eras and geographical locations have argued we can. The idea of utopia -- a place of harmony free from want and strife -- has shaped both imagined and real places. So has its opposite: dystopia. This course will focus on architectural visions and solutions for utopias from the ancient world to the present: from myths of long-lost cities to projected colonies on the moon and Mars.

ARHI.3210 Italian Renaissance Art (Formerly 58.321) - Credits: 3

A study of painting, sculpture, and architecture in the major artistic centers of Italy (Florence, Rome, Venice, Milan and the Northern Courts) during the 15th and 16th centuries. In addition to examining artworks by some of the most important artists of the period - Leonard da Vinci, Michelangelo, titan - this course considers larger themes raised by these works and gibes attention to the conditions within which the works were originally produced and viewed.

ARHI.3230 Northern Renaissance Art (Formerly 58.323) - Credits: 3

A study of 15th and 16th century painting and sculpture north of the Alps including artists such as Jan van Eyck, Hieronymus Bosch, Jean Fouquet and Albrecht Drer. This course considers how social forces (politics, race, religion, gender etc.) influenced the manner in which Northern renaissance art was produced, viewed, and understood, as well as how these forces led to the creation of some of the most startling, strange and enigmatic images of any period in the history of art.

ARHI.3250 Studies in Latin American Art (Formerly 58.325) - Credits: 3

An introduction to the art and architecture of ancient, colonial, and modern Latin America. The course provides a framework by which students consider the complex intersections--of vision, power, history, and artistic production--in Latin American art within both local and global contexts.

ARHI.3300 Italian Mannerism (Formerly 58.330) - Credits: 3

A study on the impact of the High Renaissance in the sixteenth
ARHI.3310 Asian Art (Formerly 58.331) - Credits: 3

The purpose of this course is to provide a general overview of the art of the traditional cultures of Asia, China, India and Japan. This survey provides a critical and historical examination of these cultures.

ARHI.3320 Baroque Art (Formerly 58.332) - Credits: 3

This course surveys the drama and dynamism that infused painting and sculpture from 1530-1750. With its origins in Italy, Baroque art quickly spread throughout much of Europe (including Flanders, France, England, the Dutch republic, Spain, Portugal) and the New World. This course will explore the ways the arts were used to express political ambition, forge social and political alliances, as well as to create cultural identity and memory.

ARHI.3350 The Golden Age of Spanish Art - Credits: 3

This course is a survey of art in Spain from the discovery of the Americas in 1492 through the mid-seventeenth. This roughly 150-year period, known as the Spanish Golden Age or Siglo de Oro, witnessed the expansion of the Spanish empire across the Atlantic and Asia and gave rise to many of Spain's greatest artistic achievements. This course will survey the unprecedented contributions of Spanish painters, sculptors and architects; the patrons and political forces contributing to this Golden Age of artistic production; and the place of the Spanish golden age within broader European and global contexts.

ARHI.3410 Medieval Art (Formerly 58.241) - Credits: 3

This course examines the rich cross-cultural artistic heritage of the medieval world from the Late Antique period (third century CE) through the Gothic period (fourteenth century CE). The course include the study of paintings, sculpture, illuminated manuscripts, mosaics and architecture. It will explore materials and technique, the relationship of images to sacred texts and rituals, and the controversies regarding image production. Drawing examples for the eastern Mediterranean to the rocky coast of Ireland, the course will draw out the way works of art reflected relationships between the Jewish, Christian, and Islamic religions.

ARHI.3470 French Impressionism and Post-Impressionism - Credits: 3

This course surveys the artists and artistic movements associated with impressionism and Post-Impressionism in France. The course will begin with an examination of the arts just prior to the last quarter of the nineteenth century and will continue through the beginning of the twentieth century. Readings, lectures and assignments will engage students in a close study of French artists and France itself as the art-making capital of the West during this period. In this capacity, the course will investigate how social forces (politics, gender, race, religion, etc.) influenced the manner in which "modern" art was produced, viewed, and understood.

ARHI.3500 Post Modernism (Formerly 58.350) - Credits: 3

Following the Second World War, artists transformed the avant-garde tradition of their European predecessors to establish a dialogue with the mass media and consumer culture that has resulted in a wide array of artistic movements. Issues ranging from multiculturalism and gender to modernism and postmodernism will be addressed through the movements of abstract expressionism, pop, minimalism, neo-expressionism and appropriate in the diverse media of video, performance and photography, as well as painting and sculpture.
ARHI.3520 Contemporary Art and Culture (Formerly 58.352) - Credits: 3
Examination of issues of content, theory, and criticism in contemporary art. Current exhibitions and criticism are integral to the course. Topics vary from year to year. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

ARHI.3530 History of Public Art in the Modern Era (Formerly 58.353) - Credits: 3
This course serves as an introduction to the history of public art in the modern and contemporary world. The history of public art is examined in relation to such concerns as the definition of public space, community involvement in the creative process, the institutional and economic support system for the arts, the modern understanding of memorial sculpture, and the use of the visual arts to foster public dialogue and cultural exchange.

ARHI.3550 The City and the Environment - Credits: 3
This course examines the many ways that communities, architects, and developers have responded (or not responded) to the American landscape and environment. It will begin with the earliest settlements established by the colonists, such as Havana, Cuba, and New York City and progress to the present with a special emphasis on Lowell and Boston. The course will not only examine specific cities but also architectural utopias, city planning, the national park system, sustainable design, and contemporary efforts to merge the needs of the city with environmental awareness.

ARHI.3600 Museum Issues (Formerly 58.360) - Credits: 3
The art museum in the United States is a unique social institution because of its blend of public and private support and its intricate involvement with artists, art historians, collectors, the art market, and the government. This course will study the art museums history and status in our society today. Special consideration will be given to financial, legal and ethical issues that face art museums in our time. Short papers, oral reports and visits with directors, curators and other museum officials in nearby museums will be included along with a detailed study of a topic of ones choice.

ARHI.3650 Art and Environment (Formerly ARHI.2300) - Credits: 3
This course surveys developments in land, environmental, and ecological art. Some of the most compelling artists today engage with the politics of land use, including the conditions of the global economy, climate change, environmental justice, sustainability, sovereignty and land claims, uneven geographies and expanding megacities, and the privatization of public space.

ARHI.4900 Art History Seminar (Formerly 58.490) - Credits: 3
Study of particular artist, style or selected art historical problem. Topics to be announced. Course may be repeated.

ARHI.4910 Art History Seminar (Formerly 58.491) - Credits: 3
Study of particular artist, style or selected art historical problem. Topics to be announced. Course may be repeated.

ARHI.4940 Directed Study in Art History (Formerly 58.494) - Credits: 1-4
An individual supervised research project relating to stylistic, thematic or methodological issues in Art History, the result to be presented in a significant paper.

ARHI.4950 Advanced Tutorial in Art History (Formerly 58.495) - Credits: 3
A program of directed study affords the advanced student with an additional opportunity to pursue a previously explored problem in greater depth or to initiate and investigate an additional problem. The purpose is to sharpen and refine skills for scholarly research and presentation.

ARHI.4960 Practicum Experience in Art History (Formerly 58.496) - Credits: 3
A program of on-campus and/or off-campus experiences for Art History students only. Specific requirements will vary depending upon department policies and the nature of the program undertaken by the student. The intent of the practicum experience is to provide an occasion for investigation of a community, social, cultural or artistic area and for applying techniques of problem solving and/or credits. Students will be graded satisfactory or unsatisfactory.
Degree Pathways

Degree Pathways are a sample semester-by-semester sequence of courses which might be followed for successful completion of a degree, diploma, credential or certificate from the university.

Digital Media

- fall 2021 and beyond

Digital Media

The interdisciplinary Digital Media program prepares students for a career in the ever-changing field of dynamic and rapidly expanding media market. The rigorous curriculum and hands-on client-based projects emphasize a creative approach to content production and are designed to equip students with skills necessary to navigate the field of communications shaped by convergent media. Courses provide theoretical and practical knowledge combining historical and critical inquiry with vocational skills. Instruction in writing, broadcasting journalism, editing, pre-production, and production offer students many approaches to short and long-format video and audio content for a variety of platforms including social media. The programs interdisciplinary format emphasizes strategies for integrating technical and conceptual skills into the creative process.

The University of Massachusetts Lowell offers a Bachelor of Arts degree with a major in Digital Media and a minor in Digital Media. The students can also select the Digital Media Concentration in the Bachelor of Liberal Arts major.

For additional information, visit the Digital Media website.

Major

The University of Massachusetts Lowell offers a Bachelor of Arts degree with a major in Digital Media. The program provides opportunities for students who see their talents and passion best applied in a diverse and rapidly expanding field of media production. Built on a rigorous curriculum and prioritizing real-life client experiences, this program offers many courses in video, film, sound production, editing, motion graphics, broadcasting, and screenwriting instructed by industry experts. The interdisciplinary structure of the program is built on close collaborations with other programs and departments offering options for students to further their theoretical and practical knowledge of the field.

Classes mix theory and hands-on learning, so students develop a fundamental baseline of knowledge as well as their personal interests in media creation. The Digital Media program prepares students from formative introductory classes to the completion of a professional capstone portfolio project that meets the requirements of future employers.

View the complete Degree Pathway.

For additional information, contact the program coordinator (https://www.uml.edu/FAHSS/Digital-Media/Contact.aspx).
DGMD.1000 Introduction to Digital Media (Formerly JMS 100/DGMD 100) - Credits: 3

This foundational course that surveys the history and current state of digital and web-based media from a variety of perspectives: cultural and ethical, as well as the production and monetization of media. Students engage with and become critical consumers of media, learning how we use it to disseminate, market, entertain, influence and disrupt.

DGMD.1100 Introduction to Digital Media Production - Credits: 3

This is a foundational production-level course in the Digital Media program. The course is designed for students to learn the principles of video production and post-production. Students will be introduced to a variety of video equipment and will learn the basics of editing software, using Adobe Premiere Pro. Likewise, students should expect to gain foundational level skills with sound recording, lighting, and production etiquette. A significant portion of the course is dedicated to in-the-field and in-the-studio hands-on experience. Upon completion of the course, students will be able to create short-format projects using a single camera and will be ready to move onto the production of portfolio-level non-fiction and narrative-based films. No prior experience with the medium is necessary.

DGMD.1210 Introduction to Audio Production - Credits: 3

This introductory-level production course is designed to engage students in learning techniques and principles of audio production and integration of sound into media storytelling including digital film, commercial media applications, internet production, and many more. Students will learn basic workflows of digital sound recording, processing, editing, and mixing. Likewise, students will be introduced to the aesthetic properties of sound and discuss various applications and form through the study of existing works. A significant portion of the course is dedicated to in-the-field and in-the-studio hands-on experience (both individual and in-group). No prior experience with the medium is necessary. The course is required for Digital Media BA majors but is open to anyone.

DGMD.2200 Screenwriting - Credits: 3

In this class students will be immersed in the art and craft of creating compelling stories for the screen in both fiction and nonfiction genres. As it has been said many times about media making, the story is the heart of media production. Students will develop screenwriting abilities through gaining knowledge of and experience with story conception and development: character development; story structure; dramatic action; dialogue; scene/sequence construction and writing for emotional impact.

DGMD.2310 Media, Law and Ethics (Formerly 41.237/DGMD 231) - Credits: 3

This course explores key legal issues likely to confront journalists, mass media professionals or students interested in learning more about the relationships between law, media and ethics in this global community. Nonetheless, students are challenged to think critically about the applicability of those issues to individuals and to media institutions that transmit information via spoken communications, writing, traditional media, mobile messages, social network sites, or e-mail messages.

DGMD.2400 Introduction to Digital Editing - Credits: 3

This is an introductory course in digital editing. Students are going to be introduced to the basics of digital editing, the aesthetics and technical skills of digital editing for film and video.

DGMD.2510 Video Production for Digital Media - Credits: 3

In this course students are going to understand the theory and practice of video production using a single digital camera for digital media through a mix of heavy hands-on practice and lectures. Students will be expected to understand: full digital camera operation and settings, audio control, basic directing, basic lighting, and basic editing intended for digital production. Students will also be expected to learn the terminology of video production/post-production intended for digital media.

DGMD.3000 Multimedia Storytelling (Formerly JMS 300/DGMD 300) - Credits: 3

This course will facilitate a deeper understanding of the uses of online and multimedia communication technologies in a democratic society and the impact of such technologies on the way we communicate. The course will provide students with the opportunity to develop professional knowledge and skills with the tools used in online and multimedia creation. Students will develop a critical understanding of multiplatform and multimedia technologies and will learn how to use video, digital photography, audio, video, social networking and other new technologies.

DGMD.3100 Advanced Editing for Digital Media - Credits: 3

This class is dedicated to the practice of non-linear editing of media for films, television, or the web. Instruction will focus on
the development of formal and conceptual post-production practices needed for creating compelling visual stories. Students will consolidate their post-production skills developed in previous courses and further improve in areas of editing picture and sound, color grading and effects. Emphasis will be made on developing necessary software skills, post-production workflow, and aesthetic approaches.

DGMD.3300 Digital Cinematography - Credits: 3

This course emphasizes the concepts needed to control the quality of images created, including such techniques as varying the frame rate, shutter speed, exposure, camera filters and color temperature. Topics covered will include camera operation, composition, framing, lens choice, camera movement, collaboration, blocking, continuity and all aspects of visual storytelling.

DGMD.3400 Lighting Principles (Formerly JMS 340/DGMD 340) - Credits: 3

In this course students are going to understand the principles of lighting, its nature, its physical Characteristics, and its artistic role in media production. Class will have significant hands-on assignments and demonstrations beside theoretical background lectures. The concept will be developed based on a one-camera setting only. Students will work with light meters to guide their lighting schemes.

DGMD.3502 Production Management for Film - Credits: 3

In this course students are going to be introduced to the process of film production management from preproduction through production and screening. Students will learn budget management, crewing requirements, location needs, equipment rentals, and associated production costs.

DGMD.3701 Visual Motion Effects - Credits: 3

In this course, students are going to use After Effects as a tool to help them achieve a successful and visually convincing effect after going through idea generation process. Students will work on masking, cloning, and three-dimensional space with the aim of producing short productions. Familiarity with Photoshop is preferred.

DGMD.4000 Directed Study in Digital Media (Formerly JMS 400/DGMD 400) - Credits: 1-6

Through frequent consultation with the instructor, the student carries out the investigation of a particularly specialized area of interest. This course may be repeated for up to a total of 6 credits.

DGMD.4100 TV Studio Production (Formerly JMS 410/DGMD 410) - Credits: 3

This course will offer you the opportunity to produce different types of live programs using digital technology. Plan, organise and direct TV studio-based broadcasting. Work effectively as part of a group. It provides a working knowledge of compositional, personal and organizational production skills in relation to the making of a live broadcast program using at least three cameras having in mind that you will cut/edit form a camera to another without stopping. It requires collaboration, teamwork and strict, organized structures. In most cases, it requires leadership. But for everybody, personal qualities such as determination, enthusiasm and persistence are almost essential. So too is engaged participation.

DGMD.4103 TV Sport Broadcasting - Credits: 3

In this course, students are going to learn the techniques and theory behind mobile TV production in regards to the professional sports industry. A look into the major sports of American culture and production techniques utilized to produce each. Environmental factors governing outdoor TV production as well as state and community government issues regarding the broadcast of each sport. In this course, students will be working in collaboration with UMass Lowell Athletic Department and will be involved with the Tsongas Arena sports activities through its Audio/Video department.

DGMD.4110 Titles in Motion (Formerly DGMD 411) - Credits: 3

The course aims to provide students with an understanding of the creative, visual and formal aspects of time-based communication and motion graphic design from both a contextual and technical point of view. Designers, with their comprehension of the principles of graphic design, typography and theories of visual communication will develop a knowledge and understanding of processes and techniques involved in creating time-based media including title sequence design. Projects introduce students to time-based visual communication environments. Unique conditions influencing the roles of storyboarding, planning, typography, graphics, symbolic systems, narrative, sound and time.

DGMD.4200 Podcasting - Credits: 3

In this class, students will create audio segments in the style of a Podcast, each executed with increasing complexity. Students will use the language of cinema, television, print, and the web. They will conduct research, scriptwriting, producing, location scouting, and organize scheduling. Students will use current technology to record a location-based audio program.

DGMD.4300 Directing for Film - Credits: 3
In this course, students will work on spatial exploration, mise en scene, and directing the actor. Students will learn methods in scene study and improvisation beside rehearsal techniques, script breakdown and analysis. Students will have first hand experience of the role of director on set and beyond. Leadership and decision making are two qualities and major factors that play a crucial role in the progress of this class.

DGMD.4750 Internship in Digital Media - Credits: 3

This course is a semester-long internship with one of Digital Media community partners. Students in this course will be practicing media as it is being produced on the ground today through direct hands-on experience.

DGMD.4980 Digital Media Capstone I - Credits: 3

The first section of the capstone course is designed for guided self-designated projects by seniors in the Digital Media BA program. The course is a part of a sequence of two courses and is designed to be intense engagement that should manifest in the significant project taken from concept through production. Students can work individually and collaboratively under the close supervision of the faculty. The students are required to submit an application that includes a sound project proposal to be eligible for enrollment into the course. The sequential section DGMD.4991 needs to be completed by the BA students to graduate.

DGMD.4991 Digital Media Capstone II - Credits: 3

This is the second part of capstone course sequence and is designed for guided self-designated projects by seniors in the Digital Media BA program. The course is a part of a sequence of two courses and is designed to be intense engagement that should manifest in a significant project taken from concept through production. Students work individually and collaboratively under the close supervision of the faculty. The end result of the course should be the completion of a significant project; the final step should result in a public screening. DGMD.4980 needs to be completed for student to qualify for the course.
Degree Pathways

Degree Pathways are a sample semester-by-semester sequence of courses which might be followed for successful completion of a degree, diploma, credential or certificate from the university.

Economics

- fall 2015 and beyond

Quantitative Economics

- fall 2022 and beyond

Economics Department

Mission Statement

The Department of Economics at the University of Massachusetts Lowell aims to generate innovations in knowledge through the rigorous work of its research faculty, to disseminate this knowledge, and to create synergies between high-quality academic research, teaching activities and community engagement. In doing so, we are committed to the highest quality of teaching excellence and student support. We provide students with the skills necessary to make sense of everyday real-world events, as well as the technical abilities needed to be successful in a wide range of demanding career paths and also in graduate studies in a broad set of fields. Moreover, we seek to foster an environment with diverse backgrounds and perspectives as well as the inclusion of traditionally underrepresented groups in the discipline of Economics, all of which we believe are critical in generating a vibrant academic community.

Overview/Description

The Economics Department provides students with the conceptual and analytical tools needed to make efficient choices in a world of finite resources and infinite wants. Students learn the principles of economics in our introductory courses. In our upper division courses, students apply those principles to decision making problems faced by families, firms, and government agencies in a global market-based economy. All of our courses emphasize the development of critical thinking skills necessary to be world ready and work ready.

The Economics Department offers Bachelor of Arts in Economics, Bachelor of Science in Quantitative Economics and a minor area of studies.

For additional information, visit the Department of Economics [website](https://www.uml.edu/FAHSS/economics/Programs/default.aspx).

Majors

The Department of Economics offers a Bachelor of Arts in Economics and a Bachelor of Science in Quantitative Economics.

Economics Major

The BA program provides rigorous training in economic theories and their applications. Students trained in this program are expected to use economic tools from a wide range of fields to evaluate, understand, and address economic and societal problems.

Quantitative Economics Major

The BS program is a STEM program that focuses on a systematic study of mathematical and statistical analyses in economics. Students trained in this program are expected to master economic modeling and data analyses and conduct independent investigations.

View all the complete Degree Pathways.

For more information, contact the Department of Economics [Contact-Us.aspx](https://www.uml.edu/FAHSS/economics/Contact-Us.aspx).

College of Fine Arts, Humanities & Social Sciences

Degree Pathways are a sample semester-by-semester sequence of courses which might be followed for successful completion of a degree, diploma, credential or certificate from the university. Students should follow the degree pathway appropriate to their catalog year. A students catalog year is typically defined by the date of their entry into the University of Massachusetts Lowell.

**Total Minimum Credits = 120**

Economics majors are required to complete specific Calculus math courses. This math requirement can be satisfied through the following options:

- MATH.1210
- MATH.1220
- MATH.1280
A major in Economics consists of 36-54 Economics credits with at least 18 credits at the 3000 level or higher. Students transferring to the college and wishing to major in Economics must make individual arrangements with the department chairperson regarding satisfaction of major course requirements.

For students who entered prior to fall 2018:
Students majoring in Economics must maintain at least a 2.0 grade point average (GPA) overall and at least a 2.0 GPA in their Economics courses.

For students who entered fall 2018 and beyond:
Students majoring in Economics must maintain at least a 2.2 grade point average (GPA) overall and at least a 2.0 GPA in their Economics courses.

Restriction on off-campus study:
Be advised that any course taken at another institution must be formally approved prior to enrollment. See the catalog policy for details.

Total Minimum Credits = 120

1Required for entering freshmen in the College of Fine Arts, Humanities & Social Sciences.

2The required math courses (MATH.1280 and MATH.1290) can be satisfied by taking MATH.1310 (https://www.uml.edu/catalog/courses/MATH/1310) or any higher level Calculus course. Additionally, students are encouraged to take additional quantitative courses such as MATH.2210 (https://www.uml.edu/catalog/courses/MATH/2210), MATH.2340 (https://www.uml.edu/catalog/courses/MATH/2340), and COMP.1005 (https://www.uml.edu/catalog/courses/COMP/1005).

3Core Curriculum Essential Learning Outcomes in the major are met as follows:

- Diversity and Cultural Awareness (DCA) is met by taking ECON.3020 (https://www.uml.edu/catalog/courses/ECON/3020) or any other DCA course (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf).
- Information Literacy (IL) is met by taking ECON.2120 (https://www.uml.edu/catalog/courses/ECON/2120)
- Social Responsibility and Ethics (SRE) is met by taking ECON.3450 (https://www.uml.edu/catalog/courses/ECON/3450) or any other SRE course (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf).
- Written and Oral Communication (emphasizing Writing in the Discipline) (WOC) is met by taking ECON.2120 (https://www.uml.edu/catalog/courses/ECON/2120)
- Critical Thinking and Problem Solving (CTPS) is met by taking ECON.3040 (https://www.uml.edu/catalog/courses/ECON/3040)
- Applied and Integrative Learning (AIL) is met by taking ECON.3030 (https://www.uml.edu/catalog/courses/ECON/3030)

A major in Quantitative Economics consists of 42-54 economics credits with at least 18 credits at the 3000 level or above. Students transferring to the college and wishing to major in Quantitative Economics must make individual
arrangements with the department chairperson regarding satisfaction of major course requirements. Students majoring in Quantitative Economics must maintain at least a 2.2 grade point average (GPA) overall and at least a 2.2 GPA in their economics courses.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) policy for further details. You should meet with your faculty advisor to determine how you will meet the Core Curriculum requirements.

Current UMass Lowell students should use their Advisement Report in SIS (https://www.uml.edu/Enrollment/SiS/default.aspx). If you need assistance, please contact your advisor.

**Restriction on off-campus study:**

Be advised that any course taken at another institution must be formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the catalog policy (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

_Last updated: 12/01/2021_
ECON.1010 The Economics of Social Issues (Formerly 49.101) - Credits: 3

Social Issues in Economics will take economic theory and apply it to public policy decisions. Topics that will be covered in the course are; Economics of crime, Should we legalize drugs, is it more economical to imprison someone for life or seek the death penalty and did the Supreme Court decision in Roe v Wade (the legalization of abortion) contribute to the declining crime rate that began in the 90’s? The economics of unintended consequences will explore how well meaning public policy sometimes backfires and has the reverse effect; health economics will look at the rising cost of healthcare and the effect of Obamacare; Taxes and poverty, is there a natural rate of poverty (does minimum wage increases actually contribute to a higher rate) and does taxing the rich less actually help the economy; Energy &Environmental economics, what is the effect of global warming, or is it global cooling, and what is the best energy mix for the 21st century and lastly, who has it right, New Keynesians or Neo-Classicals.

ECON.2010 Principles of Microeconomics (Formerly 49.201) - Credits: 3

Studies the principles of production and exchange. An introduction to demand, supply, pricing, and output under alternative market structures. Derived demand and resource markets are introduced. Meets Core Curriculum Essential Learning Outcome for Quantitative Literacy (QL).

ECON.2020 Principles of Macroeconomics (Formerly 49.202) - Credits: 3

This course studies national accounts, inflation, and aggregate unemployment, as well as the driving forces behind business cycles and long-run growth in the context of aggregate demand and aggregate supply. In addition, it examines monetary and fiscal policy, the Federal reserve, and select additional topics, such as an introduction to open-economy macroeconomics.

ECON.2110 Statistics for Business and Economics I (Formerly 49.211) - Credits: 3

Presents descriptive statistics, sophisticated counting techniques and other components of probability, simple random variables and their distribution, bivariate functions, sampling theory properties of estimators.

ECON.2120 Statistics for Business and Economics II (Formerly 49.212) - Credits: 3

Discusses interval estimation, hypothesis testing, analysis of variance, applied regression theory, correlation analysis, and other selected topics.

ECON.3020 Labor Economics (Formerly 49.302) - Credits: 3

An introduction to the economic analysis of behaviors and institutions in the labor market: labor supply and participation, labor demand by firms, wage determination under different institutional settings, and gender, race or ethnicity as determinants of different labor market outcomes. The course presents microeconomic models, empirical findings and their public policy implications on topics such as minimum wage, affirmative action, social insurance programs, workplace safety, and subsidized day care.

ECON.3030 Microeconomic Theory (Formerly 49.303) - Credits: 3

Provides an advanced examination of price and production theory and the theory of the consumer and the firm.

ECON.3040 Macroeconomic Theory (Formerly 49.304) - Credits: 3

Building on Principles of Macroeconomics (ECON.2020), this course studies goods markets and money markets in further detail. Emphasis is placed on aggregate labor markets and also on the relationship between inflation, unemployment, and aggregate output. These topics are contextualized in order to examine aggregate economic developments in the short, medium, and long run. Optimal monetary and fiscal policies are examined against this background. Select additional topics are covered, such as the basics of open-economy macroeconomics. This course meets the Essential Learning Outcome of Critical Thinking and Problem Solving (CTPS) as defined under the Core Curriculum requirements.

ECON.3060 Urban Economics (Formerly 49.306) - Credits: 3

More than half of the world population now lives in cities. Therefore, grasping the economic dynamics of cities is a key to understanding modern economic systems. Urban economics is the economic study of cities. This course covers (I) the theories underlying cities functioning, growth and development, (II) the methods useful for examining city economies, and (II) the public policies targeting metropolitan problems. Skills in using Geographic Information System (GIS) software are also trained in this course.

ECON.3100 Development Economics (Formerly 49.310) - Credits: 3

Development Economics provides an introduction to the importance of political and market institutions in shaping the economic performance in the context of understanding
economic role of institutions; theories of income distribution and distributional conflict; effect of social conflict and class conflict on development; political economic determinants of policies; causes and consequences of corruption; and importance of financial markets. The course utilizes both theoretical and empirical approaches in its analysis of economic development.

**ECON.3110 Mathematical Economics - Credits: 3**

Since the late nineteen century, economics as a discipline has chosen mathematics as the main language of choice to describe the problems, hypothesis, theoretical explanation and tests it wants to study. This course aims to strengthen students’ “translation skills” so that they can become more comfortable in applying mathematical concepts to their study of economics problems. Two distinct features set this course apart from a typical upper-level economics course of a pure mathematics course. First, this course will not only sharpen students’ technical skills but will mainly emphasize on the connections between those skills and economic intuitions. Second, students will learn those mathematical tools in a more organized and intensive way, with ample economic applications.

**ECON.3120 Managerial Economics (Formerly 49.312) - Credits: 3**

Applies the economic theory and statistical methods to business decision making. Estimation of demand, production, cost functions and accompanying elasticity estimates, pricing and output decisions, value maximization problems, and capital budgeting.

**ECON.3160 Investments: Instruments and Strategies (Formerly 49.316) - Credits: 3**

In this course we will look at different types of investments, from stocks, bonds and real estate top mutual funds, hedge funds and derivatives exploring how and when to use them. Students will create a diversified investment portfolio using an online trading program that incorporates products covered in class. In addition we will look at how different exchanges operate and the role of financial investments in real capital accumulation and rising living standards.

**ECON.3170 Capital Markets (Formerly 49.317) - Credits: 3**

**ECON.3180 Financial Markets and Monetary Policy (Formerly 49.318) - Credits: 3**

This course studies the formal role of money, interest rates, interest rate determination, and financial markets within the context of aggregate economic activity. These topics are related to central banks, with a focus on the Federal Reserve, and linked to money supply and the tools of monetary policy. Formal theories and practical implementation of strategies and tactics of monetary policy are addressed, as well as their implications for aggregate economic activity. This course meets Core Curriculum Essential Learning Outcome for Information Literacy (IL) and Written &Oral Communication (WOC).

**ECON.3190 Public Finance (Formerly 49.319) - Credits: 3**

The economics of the public sector. Principles of public expenditure, taxation, and the public debt applied to federal, state, and local governments.

**ECON.3250 United States Economic History (Formerly 49.325) - Credits: 3**

The evolution of institutions and their functions, and sources of economic development. The contributions of railroads, agricultural population growth, immigration, capital formation and technological progress to economic development. Other areas addressed: rapid industrialization and antitrust laws; evolution of financial institutions, the creation of the Federal Reserve System, crash of 1929, the depression of the 1930s, the New Deal and various banking acts, the labor movement, the growth of international trade.

**ECON.3450 Health Economics (Formerly 49.345) - Credits: 3**

An introduction to the economic analysis of health care market. The course presents microeconomic models, empirical findings and public policies referring to the following topics: the production and demand for health (the investment/consumption aspects of health and the relationship between socio economic status and health status), the issues of moral hazard and adverse selection in the insurance market, the role of information in the physician-patient relationship, the different regulation and payment systems for providers, the Medicare and Medicaid programs, and the comparisons between the US system and the health systems of other western economies and developing countries. This class aims to help students becoming more informed future citizens and consumers or producers of healthcare. Prerequisites: 49.201 or instructor’s approval. Meets Core Curriculum Essential Learning Outcome for Critical Thinking &Problem Solving (CTPS) and Social Responsibility &Ethics (SRE).
ECON.4010 Special Topics in Economics (Formerly 49.401) - Credits: 3

Special Topics in Economics is a course for advanced undergraduates in Economics. The content will vary from semester to semester depending on the research interests of the Faculty member teaching the course.

ECON.4020 Industrial Organization (Formerly 49.402) - Credits: 3

The field of Industrial Organization studies the behaviors of firms in imperfectly competitive markets. Its importance is best illustrated by understanding limitations of perfect competition. By definition, a perfectly competitive firm takes the market determined price as given and therefore has absolutely no control on price. Consequently, there is no room for any pricing strategy, not room for advertisement, and the firm has little incentive to conduct R&D or merge with other firms. All these business practices that we see every day must be discussed and analyzed in a setting of imperfect competition - the main focus of Industrial Organization.

ECON.4030 International Trade (Formerly 49.403) - Credits: 3

This course is devoted to the study of why countries trade the products they do and the attendant benefits and costs of trade. The course covers both the main theories of international trade, and their empirical applications.

ECON.4060 International Macroeconomics - Credits: 3

This course is part of the two sub-disciplines that compose the overall discipline of International Economics, with the other sub-discipline being International Trade. As such, International Macroeconomics is complementary to International Trade, but neither course is a prerequisite for the other. This course provides an overview of open economy macroeconomics, and international financial markets and policies. The focus is on exchange rate determination, the importance of the balance of payments for both the domestic economy and the economies of other countries, international capital flows, the impact of internal debt on the balance of trade, and the interaction and potential conflicts between domestic and international economic policy objectives.

ECON.4070 Econometrics (Formerly 49.407) - Credits: 3

This course covers regression analysis including ordinary least squares, bivariate and multiple regression. In addition to basic regression technique and inference issues, specific topics related to OLS, such as interaction terms and quadratic forms together with more advanced techniques such as panel data and instrumental variables will be covered. This course will be held in a teaching lab using the STATA software package widely used by economists and other social scientists. You will learn how to use STATA for the following: importing data from an external source into STATA; inspecting and becoming familiar with the dataset; producing the main descriptive statistics for the dataset (e.g., mean, median, standard deviation and scatter diagrams); analyzing the data to test hypotheses of interest.

ECON.4090 Innovation and Development - Credits: 3

This course integrates ideas from the history of economics with national development experiences to construct a theory of development. Fundamental to economic development is the innovation process through which business enterprises, situated in particular nations, generate productivity. The first part of the course focuses on the advanced nations, particularly Britain, United States, and Japan. Then we look at the emerging economies of South Korea, Taiwan, Singapore and Hong Kong, followed by the emerging economies of China and India. We explore why Russia is lacking in innovative enterprise. We conclude by asking how the integration of the theory and history of economic development can inform strategies to promote economic development characterized by stable and equitable growth.

ECON.4100 Economic Growth and Development (Formerly 49.410) - Credits: 3

In this course, we try to solve the puzzles of why some countries are so rich and some are so poor and why some countries grow so quickly and some grow so slowly. After introducing the basic analytical framework, we will investigate various possible reasons in explaining the observed country differences. Those possible explanations include differences in countries’ investment rates, population growth rates, human capital accumulation rates, production technologies, openness to international trade, and government policies. Issues of income inequality and their effect on economic growth will also be addressed. This course is designed for Economics majors or minors who have fulfilled the following prerequisites, and master level students from other departments, such as the Regional Economic and Social Development Department. Pre-req: 49.201 Economics I (Microeconomics) 49.202 Economics II (Macroeconomics)

ECON.4130 Climate Change Economics - Credits: 3

Climate change affects populations around the world, underscoring the need to reduce global greenhouse gas emissions. Many disciplines are needed for innovative solutions to climate change, and economics plays a key role. Economists provide assumptions for models of current and future impacts. Economic models permit to predict how incentives can modify
individual and group behavior. Economists also use real-world data to obtain empirical estimates of the wide range of climate change effects. With this research, economists inform local and global climate policy. This course introduces concepts to understand how economists approach the development of climate policies. With this foundation and from the lens of an economist, students evaluate climate change impacts and policy solutions. Students also gain the skills to engage in active discussions of articles and other media related to these topics from a multifaceted perspective.

ECON.4150 Introduction to Environmental Economics (Formerly 49.315/415) - Credits: 3

This course provides an introduction to the field of environmental and natural resource economics. It is designed to give students an overview of how economic principles can be applied to environmental management and policy. Topic areas and applications include evaluation of environmental policies, valuation of environmental goods and services, climate change, and management of renewable and non-renewable resources. Students will learn to critique articles and other media and have intelligent discussions related to the topics listed above.

ECON.4160 Experimental and Behavioral Economics - Credits: 3

This course will introduce students to the experimental economics methodology. Experimental economics utilizes lab and natural experiments to investigate decision-making and motivations for observed behavior. After and overview of the method, the course will explore several specific topics where experimental economics has made particular contributions to the discipline. Experimental results often motivate theories of behavior that incorporate concepts such as altruism, reciprocity, and inequality aversion. Such, non-traditional, models of behavior were once considered to be solely the realm of psychology. As a result, this course will also serve as an introduction to behavioral economics - the incorporation of motivations other than self-interest into one’s utility function.

ECON.4200 Advanced Software for Economics - Credits: 3

This course is a "survey" of software used by professional economists and professionals in other disciplines to study empirical phenomena. The course is a "survey" because we will not be going into each software to deeply. Instead, the idea is that students become sufficiently familiar with the software we study so that: they are later comfortable getting into more complex operationalizations themselves and as needed given their professional trajectory; they understand similarities and differences between the software; and they develop a hands-on sense of which software may be best suited for any one application.

ECON.4300 Analytical Economics - Credits: 3

This course exposes students to advanced economic models and empirical techniques. Particular emphasis is given to the interplay between theory and empirical applications. Students in the course will learn how economic models are used to motivate empirical work in economics. They will also learn to interpret empirical work in light of the motivating theory. Finally, they will be able to evaluate to what extent and empirical application provides a good test of a theory and whether either the data or the empirical methods have any limitations in this regard.

ECON.4850 Internship in Economics (Formerly 49.485) - Credits: 1-3

Economics majors who locate an internship experience in a public or private, profit or non-profit organization which provides an opportunity to observe and apply Economics concepts to decision making and processes in the production of goods or services may with permission of the Economics Department chair receive three credits for satisfactory completion of the experience. Students are expected to have completed over 20 credits of economics classes before undertaking the internship. A five-page paper describing what was learned in the internship together with a note from the student’s supervisor indicating hours worked and satisfactory completion of assigned work is required.

ECON.4991 Independent Studies (Formerly 49.499) - Credits: 1-3

A course to permit the advanced student to do research in topics of special interest in economics under faculty supervision. This course also may be utilized to offer topics to individual students where there are insufficient number of registrants for a regular class. Restricted to Economics majors.
Sample Degree Pathway for Education - Elementary and Moderate Disabilities Option

For students who entered fall 2019 to spring 2022.

### Total Minimum Credits = 120

1. Literature Focus
2. Language Focus

The BA Ed. degree pathway shows the courses that are required to complete the degree. The semester in which some courses are offered, may differ and accommodations will be made. Courses with higher numbers (3000 and above) are generally taken in the junior and senior years. The education courses are highly field based and often require additional hours of field work in schools to better prepare you for your career.

**Notes:**

- All EDUC courses are required.
- All courses with prefixes MATH, ENGL, HIST, PSYC are required. If a course is not available in a timely fashion, exceptions may be made providing a course which meets similar subject matter knowledge is taken. This change
can only be made with approval of the program coordinator.

- **CHEM.1010**
  (https://www.uml.edu/catalog/courses/CHEM/1010)
  may be replaced by other physical science course with a lab such as **PHYS.1210**
  (https://www.uml.edu/catalog/courses/PHYS/1210) /
  **PHYS.1210L**
  (https://www.uml.edu/catalog/courses/PHYS/1210L)

- The three MATH courses (1070, 2270, 1080) may be taken in any sequence.
- The third Social Science elective may not be in Psychology.

**GPA and MTEL**

Teacher candidates must have an undergraduate GPA of 2.75 or better in order to proceed to the final practicum, they must also have passed the appropriate Massachusetts Tests for Educator Licensure (MTEL) for the two teacher licenses (01 Communications and Literacy Reading and Writing) (03 General Curriculum Multi-Subject Test and Math Test) (90 Foundations of Reading). See MTEL website (https://www.mtel.nesinc.com/) for more information.

- Foundations of Reading should be taken immediately after taking **EDUC.2000**
- Communications and Literacy must be passed by the end of the sophomore year.
- General Curriculum Multi Subject Test and Math Test must be taken during the junior year.

**Field Experience and Practicum Requirements**

Many courses have field experiences in local schools which may require completion of hours beyond course meeting times. Teacher candidates, when required, must submit materials for criminal background checks and must provide fingerprints. Program coordinators will supply information on these processes.

In order to work in schools during field experiences and the practicum, the teacher candidate must exhibit professional dispositions and behaviors and be of sound moral character. The candidate at all times must exhibit good judgment, personal integrity, and exemplary behavior. Candidates must demonstrate that they understand their professional responsibilities and have the integrity to work in schools where they will be responsible for the education and welfare of minors. Further, they must know how to engage in collaborative and collegial professional work with fellow teachers and staff.

**Graduation Requirements**

In order to graduate with a BA Ed. degree and teacher license, candidates must complete the approved program including both practica (600 hours in total). The practicum candidate is assessed using the Department of Elementary and Secondary Education Candidate Assessment of Performance (CAP) instrument and process. Candidates must demonstrate that they have met the Professional Standards for Teaching and are proficient in their ability to:

- Develop well-structured lessons.
- Adjust practice based on student assessment data.
- Meet diverse needs.
- Create a safe learning environment for all students.
- Hold high expectations for student learning.
- Demonstrate reflective practice.

**Breadth of Knowledge**

The UMass Lowell Core includes requirements designed to familiarize students with multiple perspectives regarding diverse areas of knowledge and modes of inquiry outside of their major discipline. Students gain insights into these perspectives by taking courses outside of their major discipline. The BA Ed. degree is structured for students to meet this requirement. See Breadth of Knowledge for more information.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) policy for further details. You should meet with your faculty advisor to determine how you will meet the Core Curriculum requirements.

Current UMass Lowell students should be using their Advisement Report in SiS (https://www.uml.edu/Enrollment/SiS/default.aspx). If you need assistance, please contact your adviser.

**Restriction on off-campus study:**

Be advised that any course taken at another institution must be formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the catalog policy (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

### Total Minimum Credits = 120

1Expect to do an additional 10-15 hours over semester visiting schools in both semesters.

2Alternative SRE course can be taken with the approval of advisor.

The BA Ed. degree Disability Studies for Educational and Community Organizations Option pathway shows the courses that are required to complete the degree. The semester in which some courses are offered, may differ and accommodations will be made. Courses with higher numbers (3000 and above) are generally taken in the junior and senior years. The education courses are highly field based and often require additional hours of field work in schools to better prepare you for your career.

### Notes:

- All EDUC courses are required.
- All courses with prefixes MATH, ENGL, HIST, PSYC are required. If a course is not available in a timely fashion, exceptions may be made providing a course which meets similar subject matter knowledge is taken. This change can only be made with approval of the program coordinator.
- CHEM.1010 may be replaced by other physical science course with a
lab such as PHYS.1210
(https://www.uml.edu/catalog/courses/PHYS/1210) / PHYS.1210L
(https://www.uml.edu/catalog/courses/PHYS/1210L)
• The three MATH courses (1070, 2270, 1080) may be taken in any sequence.
• The third Social Science elective may not be in Psychology.

Field Experience

Many courses have field experiences in local schools and community organizations which may require completion of hours beyond course meeting times. When required, you may have to submit materials for criminal background checks and must provide fingerprints. Program coordinators will supply information on these processes.

In order to work in schools and communities during field experiences, the student must exhibit professional dispositions and behaviors. The student, at all times must exhibit good judgment, personal integrity and exemplary behavior. Students must demonstrate that they understand their professional responsibilities and have the integrity to work in schools and community organizations where they will be responsible for the education and welfare of minors. Further, they must know how to engage in collaborative and collegial professional work with fellow educators and staff.

Breadth of Knowledge

The UMass Lowell Core includes requirements designed to familiarize students with multiple perspectives regarding diverse areas of knowledge and modes of inquiry outside of their major discipline. Students gain insights into these perspectives by taking courses outside of their major discipline. The BA Ed. degree is structured for students to meet this requirement. See Breadth of Knowledge for more information.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) policy for further details. You should meet with your faculty advisor to determine how you will meet the Core Curriculum requirements.

Current UMass Lowell students should be using their Advisement Report in SIS (https://www.uml.edu/Enrollment/SiS/default.aspx). If you need assistance, please contact your adviser.

Restriction on off-campus study:

Be advised that any course taken at another institution must be formally approved
(https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the catalog policy
(https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

1Language Focus

2Literature Focus

The BA Ed. degree pathway shows the courses that are required to complete the degree. The semester in which some courses are offered may differ and accommodations will be made. Courses with higher numbers (3000 and above) are generally taken in the junior and senior years. The education courses are highly field based and often require additional hours of field work in schools to better prepare you for your career.

Notes:

- All EDUC courses are required.
- All courses with prefixes MATH, ENGL, HIST, PSYC are required. If a course is not available in a timely fashion, exceptions may be made providing a course which meets similar subject matter knowledge is taken. This change can only be made with approval of the program coordinator.
- HIST, ENGL, and SCIE courses can be taken in any order.

GPA and MTEL

Teacher candidates must maintain an undergraduate GPA of 2.75 or better.

To receive their teaching licenses, they must also have passed the appropriate Massachusetts Tests for Educator Licensure (MTEL) for the two teacher licenses (Communication and Literacy Reading and Writing, General Curriculum Multi-Subject Test and Math Test, Foundations of Reading). See MTEL website (https://www.mtel.nesinc.com/) for more information.

Consult your advisor on the best timing for completing each MTEL and for test preparation resources.

Field Experience and Practicum Requirements

Many courses have field experiences in local schools which may require completion of hours beyond course meeting times. Teacher candidates, when required, must submit materials for criminal background checks and must provide fingerprints. Program coordinators will supply information on these processes.

In order to work in schools during field experiences and the practicum, the teacher candidate must exhibit professional dispositions and behaviors and be of sound moral character. The candidate at all times must exhibit good judgment, personal integrity, and exemplary behavior. Candidates must demonstrate that they understand their professional responsibilities and have the integrity to work in schools where they will be responsible for the education and welfare of minors. Further, they must know how to engage in collaborative and collegial professional work with fellow teachers and staff.

Students enrolled in practicum courses EDUC.4110 (https://www.uml.edu/catalog/courses/EDUC/4110) and EDUC.4120 (https://www.uml.edu/catalog/courses/EDUC/4120) should expect to be in their school placements five full days per week.

Graduation Requirements

In order to graduate with a BA Ed. degree and teacher license, candidates must complete the approved program including both practica (600 hours in total). The practicum candidate is
assessed using the Department of Elementary and Secondary Education Candidate Assessment of Performance (CAP) instrument and process. Candidates must demonstrate that they have met the Professional Standards for Teaching and are proficient in their ability to:

- Develop well-structured lessons.
- Adjust practice based on student assessment data.
- Meet diverse needs.
- Create of a safe learning environment for all students.
- Hold high expectations for student learning.
- Demonstrate reflective practice.

### Breadth of Knowledge

The UMass Lowell Core includes requirements designed to familiarize students with multiple perspectives regarding diverse areas of knowledge and modes of inquiry outside of their major discipline. Students gain insights into these perspectives by taking courses outside of their major discipline. The BA Ed. degree is structured for students to meet this requirement. See Breadth of Knowledge for more information.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum policy for further details. You should meet with your faculty advisor to determine how you will meet the Core Curriculum requirements.

Current UMass Lowell students should be using their Advisement Report in SiS. If you need assistance, please contact your adviser.

### Restriction on off-campus study:

Be advised that any course taken at another institution must be formally approved prior to enrollment. See the catalog policy for details.

**Last updated: 3/08/2022**

### College of Fine Arts, Humanities & Social Sciences

Degree Pathways are a sample semester-by-semester sequence of courses which might be followed for successful completion of a degree, diploma, credential or certificate from the university. Students should follow the degree pathway appropriate to their catalog year. A students catalog year is typically defined by the date of their entry into the University of Massachusetts Lowell.

Though students are encouraged to take courses in all of the following three areas, students must select 2 of these 3 areas in which to focus, and take 2 (3 credit) electives in each focus area. After meeting the methodology course requirement (described above), students can take additional advanced research methods courses as electives. The lists below present a sample of relevant elective courses across campus, but these lists are subject to change and availability every semester.

### Sample Degree Pathway for Master of Arts - Public Administration - Spring 2022 and Beyond

All programs are 39 credits, consisting of 6 required courses, 2 courses from the flexible core, and 6 courses within a specialized option.

#### Required Courses

<table>
<thead>
<tr>
<th>Course #</th>
<th>Course Name</th>
<th>Cr.</th>
</tr>
</thead>
<tbody>
<tr>
<td>MPAD.5010</td>
<td>Foundations for Public Administration</td>
<td>3</td>
</tr>
<tr>

</tbody>
</table>

**Track**

Four (4) courses from one of the following tracks.

See tracks below.

**Elective**

The remaining three required course credits can be selected in conjunction with the research advisor to add breadth to the program. This course can be an appropriate engineering, math, or science course.

<table>
<thead>
<tr>
<th>Course #</th>
<th>Course Name</th>

Total 2 0

Elective Courses

A requirement of the Ph.D. program is that every student will have multiple types of experiential learning experiences and systems thinking skills. These requirements are structured into three core groups of experiences that students will meet via at least one required elective course taken in each core:

i. A course in computer modeling, industry software, or numerical models.

ii. A course with a focus on field research or analytical laboratory measurements.

iii. A course with dynamic simulation and systems thinking content.

Experiential Learning Experiences and Systems Thinking

### i. Graduate-level courses that Utilize the Computer Workstations and Technical Software (Choose 1)

Sample Degree Pathway for a Doctorate in Physics

Entering with Bachelor of Science in Physics

This is ONE possible 4-year sequence of courses for students entering the program with a B.S. in Physics leading to M.S. and Ph.D degrees. This sequence assumes the entering student has adequate preparation in undergraduate Mechanics, Electricity and Magnetism, and Quantum Mechanics but not Statistical Mechanics. Most students take additional semesters to complete their dissertation research.

Sample Degree Pathway for Doctorate in Physics - Medical Physics Option

Entering with MS in Medical Physics

This sequence assumes the entering student has an MS Degree with thesis in Medical Physics from a CAMPEP-accredited institution, including clinical rotation, but has no advanced preparation in the core Physics courses. It is further assumed that the prior MS Degree involved a total of 30 credits beyond the baccalaureate degree. The Advanced Project may be waived, as done in this example, if the appropriate conditions are met. Note that the actual degree pathway depends on the particular preparation of the student, therefore this example may not be applicable to everyone.

1Core Public Health Courses are typically offered every spring/fall semester. Courses are usually offered face-to-face, but are occasionally offered in online format.

2PUBH.5010 (https://www.uml.edu/catalog/courses/PUBH/5010) is a prerequisite for all upper level Social & Behavioral Sciences Specialization Courses and should be taken in the first semester of the program.

3Social and Behavioral Specialization Courses are typically offered once every other year in face-to-face format.

4Practicum courses are meant to be taken sequentially. A student typically takes PUBH.6660 (https://www.uml.edu/catalog/courses/PUBH/6660) in the next-to-last semester of the program and takes PUBH.6670 (https://www.uml.edu/catalog/courses/PUBH/6670) in the last semester before graduation.

5Students must take 6 credits of electives in Public Health or a field relevant to their academic program. These courses are typically selected in collaboration with an academic advisor or graduate program coordinator.

1. Core Public Health Courses are typically offered every semester. Courses are usually face-to-face but are occasionally offered in online format.

2. PUBH.5750 (https://www.uml.edu/catalog/courses/PUBH/5750) is a prerequisite for PUBH.6820 (https://www.uml.edu/catalog/courses/PUBH/6820) and is typically taken in the first semester of the program.

3. Nutrition Specialization Courses are typically offered once per year or every other year in a face-to-face format. NUTR.6040 (https://www.uml.edu/catalog/courses/NUTR/6040) is offered in Spring of odd numbered years. NUTR.6010 (https://www.uml.edu/catalog/courses/NUTR/6010)/Nutrition Assessment is offered in Fall of odd numbered years.

4. If possible, Public Health Nutrition Practice is a Fall course, and Community Based Interventions is a spring course.

5. PUBH.5750 (https://www.uml.edu/catalog/courses/PUBH/5750) Epidemiology and Biostatistics should be taken before NUTR.6040 (https://www.uml.edu/catalog/courses/NUTR/6040)/Nutrition Epidemiology.

6. Practicum courses are meant to be taken sequentially. A student typically takes PUBH.6660 (https://www.uml.edu/catalog/courses/PUBH/6660) in the next-to-last semester of program and takes PUBH.6670 (https://www.uml.edu/catalog/courses/PUBH/6670) in the last semester before graduation.

7. Students must take 9 credits of electives in Public Health, Nutrition, or a field relevant to their academic program. These courses are typically selected in collaboration within academic advisor or graduate program coordinator.

NOTE: This program can accompany both Part-time and Full-time plans of study. The program can begin in the fall or spring semester. Students may transfer to other MPH options, including the Dietetics option, if qualified. Please discuss with your advisor and graduate coordinator if you are considering transferring to another MPH option.

Total Credits = 42

### Total Minimum Credits = 120

Quantitative Literacy (QL) is fulfilled outside the English major. The department recommends that all majors take MATH.1110 which fulfills both the Math Breadth of Knowledge requirement and the Quantitative Literacy ELO. See QL course listing for a full list of classes that fulfill this requirement.

These three foundations courses may be taken in any order: Critical Methods, British Literary Traditions, and American Literary Traditions. They will introduce you to essential approaches to literary study and to the literary history that will ground your further studies. We strongly encourage you to take these courses before moving on to upper-level English courses.

World Ready Language Track (WR track) requires successful completion of a two course sequence in a World Language (depending on placement) and three approved courses on the culture/history/literature/film related to that language, but taught in English. (Total of 15 credits.) For detailed information refer to Policies - Language Requirements in the undergraduate catalog.

See requirements for period electives, Theory/Composition/Language, and capstone below. Some students may satisfy the Diverse Traditions requirement with a 2000 level course and should consult with their advisors to be sure that they will also satisfy both the DCA & SRE ELOs.
A minimum of 36 credits, appropriately distributed, is required in English department courses. Students may not exceed the maximum of 54 credits of English department courses (not counting College Writing I & II) within the first 120 credits presented toward graduation. At least 66 credits must be earned outside of the major.

- In order to graduate, students must earn a cumulative 2.2 grade point average for all English department courses, with the exception of College Writing I and II.
- All English majors must take at least two courses that satisfy the Diverse Literary Traditions requirement. These courses explore authors and texts through the historically under-represented perspectives of race, ethnicity, gender, disability, post-coloniality, and sexuality. Certain diversity courses may also significantly address non-western literary traditions. Courses satisfying this requirement take as their main focus literary traditions that respond to and represent voices outside the traditional canon, providing students with an opportunity to consider the complex power dynamics that influence literature and the academic field of literary study and to consider the way literary texts can engage and influence these same power dynamics. Students should consult the AR in SIS for the department’s list of approved courses.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the CoreCurriculum policy for further details. You should meet with your faculty advisor to determine how you will meet the Core Curriculum requirements.

Current UMass Lowell students should be using their Advisement Report in SIS. If you need assistance, please contact your advisor.

**Restriction on off-campus study:**

Be advised that any course taken at another institution must be formally approved prior to enrollment. See the catalog policy for details.

**Required Courses**

Each of the following 2000 level foundation courses is required (9 credits):

- ENGL.2000 (Critical Methods of Literary Inquiry)
- ENGL.2810 (British Literary Traditions)
- ENGL.2820 (American Literary Traditions)

**Six approved English literature electives are required (18 credits):**

Students take six literature electives. One of these may be at the 2000 level (but can be 3000/4000 level). Five of the electives must be at the 3000/4000 level. Courses must also meet the literary period distribution requirements listed below/Lists of approved courses for period categories may be found in the Literature AR on SIS:

- ENGL.2/3/4xxx (any literature course)
- ENGL.3/4xxx Pre-1700 literature course
- ENGL.3/4xxx 1700-1900 literature course
- ENGL.3/4xxx Post-1900 literature course
One of the following Theory/Composition/Language courses is required (3 credits):

- ENGL.3070
  [History of the English Language](https://www.uml.edu/catalog/courses/ENGL/3070)
- ENGL.3080
  [Structure and Variation of the English Language](https://www.uml.edu/catalog/courses/ENGL/3080)
- ENGL.3150
  [Old English Language and Literature](https://www.uml.edu/catalog/courses/ENGL/3150)
- ENGL.3770
  [Theories of Rhetoric and Composition](https://www.uml.edu/catalog/courses/ENGL/3770)
- ENGL.3880
  [Undergraduate Seminar on the Teaching of Writing](https://www.uml.edu/catalog/courses/ENGL/3880)
- ENGL.3920
  [Visual Rhetoric](https://www.uml.edu/catalog/courses/ENGL/3920)
- ENGL.4290
  [Introduction to Literary Theory](https://www.uml.edu/catalog/courses/ENGL/4290)
- ENGL.4320
  [Introduction to Digital Humanities](https://www.uml.edu/catalog/courses/ENGL/4320)

One capstone course is required (3 credits):

A capstone will provide a culminating opportunity to complete a substantial learning project. Students should discuss their interests with their academic advisor to plan ahead for the capstone. Choose one of the following, depending on student goals and interests:

- An Individually-Designed Research Project ENGL.4xxx
  [Literary Research & Methods Seminar](https://www.uml.edu/catalog/courses/ENGL/4910)
- Directed Study in Literature
- Experiential Learning ENGL.4960
  [Internship](https://www.uml.edu/catalog/courses/ENGL/4970)
  [Practicum](https://www.uml.edu/catalog/courses/ENGL/4960)

A 4000-level Literature course (including single-author studies, upper-level thematic/period study, and advanced theory/methods courses) ENGL.4010

Selected Authors ENGL.4230

Shakespeare ENGL.4240

Shakespeare II ENGL.4270

Virginia Woolf ENGL.4280

The Harlem Renaissance ENGL.4290

Introduction to Literary Theory ENGL.4320

Introduction to Digital Humanities ENGL.4790

Optional: An additional six English electives may be taken (0-18 credits):

Additional English courses (up to six courses within the 54 credit limit) may be taken in literature, theatre, or writing. For students contemplating graduate school in the discipline, additional 3000 or 4000 level literature courses are recommended. Students are encouraged in the spring of junior year or fall of senior year to seek an experiential learning opportunity such as the Practicum (Internship) or Community Writing 1 or 2, depending on the student’s career goals and interests. Students planning a career in secondary teaching should consider the Undergraduate Seminar on the Teaching of Writing.
Note: Literature students are not required to take a minor, but they are encouraged to do so. Depending on the student’s career goals and interests, several different minors may be appropriate. All students are encouraged to discuss possible minors with their academic advisors.

Last updated: 7/14/2021
ENGL.1010 College Writing I (Formerly 42.101) - Credits: 3

A workshop course that thoroughly explores the writing process from pre-writing to revision, with an emphasis on critical thinking, sound essay structure, mechanics, and academic integrity. Students will read, conduct rhetorical analyses, and practice the skills required for participation in academic discourse. Students will write expository essays throughout the semester, producing a minimum of four formal essays.

ENGL.1010S College Writing Studio - Credits: 4

A workshop course that thoroughly explores the writing process from prewriting to revision, with an emphasis on critical reading, essay structure, mechanics, and academic integrity. Students will read, conduct rhetorical analyses, and practice the skills required for participation in academic discourse. Students will write expository essays throughout the semester, producing a minimum of four formal essays. This 4-credit version of the course provides extra time and guidance each week for critical reading, sentence-level work, and revision. Anti Req for ENGL.1011 and ENGL.1010. Placement test score determines enrollment.

ENGL.1010SI Intensive Writing Lab - Supplemental Instruction (Formerly 42.101SI) - Credits: 1

Taken simultaneously with College Writing I, the Intensive Writing Lab offers students supplemental instruction to complement their work in that course. Students who place into the Writing Lab will receive extensive training in grammar, mechanics, and the use of Standard English. The once-per-week lab encourages students' success in College Writing I and in their other classes. The course credit cannot be used to satisfy the credits required for graduation, but may be used to satisfy credits required for full time student status.

ENGL.1020 College Writing II (Formerly 42.102) - Credits: 3

A workshop course that thoroughly explores the academic research writing process with an emphasis on entering into academic conversation. Building on the skills acquired in College Writing I, students will learn to write extensively with source material. Key skills addressed include finding, assessing, and integrating primary and secondary sources, and using proper documentation to ensure academic integrity. Students will produce analytical writing throughout the semester, including a minimum of four formal, researched essays.

ENGL.1100 College Writing Workshop (Formerly 42.110) - Credits: 3

A workshop course that provides a thorough review of the basics of essay writing in preparation for success in College Writing I, with a focus on the particular needs of multilingual students. Students placed into this course will use the writing process to strengthen the fundamental skills necessary for clear academic writing in English, including the basic rules of grammar and principles of rhetoric. Credit for both 42.100/ENGL.1000 and 42.110/ENGL.1100 will not be granted.

ENGL.1100SI College Writing A ESL Supplemental Instruction - Credits: 1

College Writing A ESL Supplemental Instruction.

ENGL.1110 College Writing I ESL (formerly 42.103/111) - Credits: 3

Satisfies the first half of the first-year writing requirement, equivalent to 42.101 College Writing I, with a focus on the particular needs of multilingual students. Credit for both 42.101 and 42.111 will not be granted, nor credit for both 42.101 and 42.103.

ENGL.1110SI Supplemental Instruction for College Writing I ESL (Formerly 42.111SI) - Credits: 1

Supplemental Instruction for College Writing I ESL.

ENGL.1120 College Writing II ESL (formerly 42.104/112) - Credits: 3

Satisfies the second half of the first-year writing requirement, equivalent to 42.102 College Writing II, with a focus on the particular needs of multilingual students. Credit for both 42.102 and 42.112 will not be granted, nor credit for both 42.102 and 42.104.

ENGL.1120SI College Writing II ESL Supplemental Instruction (Formerly 42.112SI) - Credits: 1

College Writing II ESL Supplemental Instruction

ENGL.1810 Introduction to Literature - Credits: 3

This course, as the name implies, serves as an introduction to literature. We will read and discuss works in the main genres of the short story, short novel, poetry, and drama. In addition to presenting the conventions and development of each of these genres, the course will provide opportunities to strengthen skills in close reading and critical thinking.

ENGL.2000 Critical Methods of Literary Inquiry
Examination of diverse critical and theoretical approaches to literature in the development of literary analysis.

**ENGL.2011 Medieval Myth and Legend - Credits: 3**

Explores myth and legend in the literatures of England, Europe, and the World in the Middle Ages (500-1500). Topics may include dragons, djinns, and King Arthur, as well as knights, chivalry, the storyteller Scheherazade, Dante’s walk through the Inferno, werewolves, and magic. We will discover how these fantastic tales negotiate cultural issues like genders, race, and ethnicity, political power, and the creation of art. All readings in modern English translation.

**ENGL.2020 Great Books of the Modern Period (Formerly 42.202) - Credits: 3**

Much of what we consider "contemporary" was born out of the modernist period, roughly 1900-1950, and was considered radical, even salacious, in its time. This course provides a sampling of modernist literature. Students will explore this period by examining exemplary texts, numerous historical and social events, and a few films.

**ENGL.2070 English Studies in a Digital Environment (Formerly 42.207) - Credits: 3**

Students build on skills acquired in College Writing to gain English Studies discipline-specific mastery of the writing conventions, research, and citation practices used in departments of English. In addition, students practice the digital skills that will support them as they join the online learning community of the UML Department of English.

**ENGL.2100 Drama (Formerly 42.210) - Credits: 3**

Presents a study of plays from the classical period to the present.

**ENGL.2110 Poetry (Formerly 42.211) - Credits: 3**

Studies selections from the Renaissance through contemporary periods.

**ENGL.2120 The Short Story (Formerly 42.212) - Credits: 3**

This course teaches students how to sharpen their critical reading skills by learning to think about the short story in terms of its evolution over the last 200 years and by studying its literary techniques and themes. Student practice close, active reading as they examine and express their reactions to authors' works. Readings may include authors such as Alexie, Alvarez, Baldwin, Bambara, Bechdel, Chekhov, Diaz, Faulkner, Gilman, Hawthorne, Hemingway, Irving, LeGuin, Lispector, Marquez, O’Connor, Poe, and Tolstoy.

**ENGL.2160 Monsters, Apes & Nightmares (Formerly 42.216) - Credits: 3**

This course examines literary responses to science in England and the United States from the early Nineteenth Century to the present. Readings include novels--Frankenstein, The Island of Doctor Moreau, Dr. Jekyll and Mr. Hyde, Jurassic Park--essays, and poems. Meets Core Curriculum Essential Learning Outcome for Social Responsibility & Ethics (SRE).

**ENGL.2170 The Horror Story (Formerly 42.217) - Credits: 3**

Explores the genre from Poe to the present.

**ENGL.2180 Comedy (Formerly 42.218) - Credits: 3**

Presents the theory and practice of comedy from the Greeks to the present.

**ENGL.2200 Oral & Written Communication for Computer Science (Formerly 42.220) - Credits: 3**

The main goal of this course is to enhance the student’s understanding of the elements of effective communication, and to put that knowledge into practice in a supportive, cooperative, workshop environment. Limited to Computer Science majors.

**ENGL.2220 Oral Communication (Formerly 42.222) - Credits: 3**

Develops and applies the basic speaking skills that can be adapted to a variety of personal and professional contexts. Emphasis is placed on selection, analysis, organization and presentation of speech materials. Practice skills include listening, interviewing and the delivery and critique of extemporaneous speeches.

**ENGL.2240 Business Writing (Formerly 42.224) - Credits: 3**

Studies the theory and practice of writing letters, memoranda and reports on specific business and technical problems. Registration preference for students enrolled in Business programs.

**ENGL.2260 Scientific and Technical Communication**
(Formerly 42.226) - Credits: 3
Studies the theory and practice of letters, memoranda, reports and oral presentations on specific scientific and technical problems.

ENGL.2270 Essay Writing for English Majors
(Formerly 42.227) - Credits: 3
Analyzes and discusses the techniques and styles of selected professional essayists as well as the preparation of student essays. Emphasis will be placed on the writing process from prewriting through drafting and revising. English majors and minors only.

ENGL.2320 Turning Fiction into Film (Formerly 42.232) - Credits: 3
This course explores film adaptation by looking at how writing can be turned into the visual and auditory forms. Through reading novels and watching their film adaptations, students learn conventions of fiction and film, and draw on this knowledge to discover the implications of adapting a written story into a movie. By asking students to think about the different ways writers and filmmakers convey meaning to their audiences, this course attempts to answer the question of why the movie is never exactly like the book.

ENGL.2330 Play Analysis (Formerly 42.233) - Credits: 3
An introduction to the principles of play construction and the vocabulary and methods of interpreting play texts for theatrical production. Required of all theatre arts concentrators.

ENGL.2360 Science Fiction and Fantasy (Formerly 42.236) - Credits: 3
Designed to introduce students to understand science fiction and fantasy within the broader context of literature and literary theory. It attempts to develop and hone student’s skills of critical analysis as it supplies them with the tools to contextualize their reading experience - i.e., to understand the origins and politics of the books that they read.

ENGL.2380 Introduction to Creative Writing
(Formerly 42.238) - Credits: 3
A course for aspiring creative writers among freshman and sophomores which offers an introduction to the craft of creative writing in its primary genres: poetry, fiction, drama, creative non-fiction (emphases will vary depending upon instructor). The focus of this course will be on learning the fundamentals of craft techniques and peer review.

ENGL.2381 Introduction to Creative Writing (All Majors) - Credits: 3
This course is an introductory level workshop in creative writing. Students will read and discuss works of poetry, fiction, and creative nonfiction by established writers, and practice craft in all three genres through short exercises and assignments. Students will have an opportunity to workshop their creative work, and critique peer works. Class time will be divided between brief lectures on specific aspects of writing, craft techniques, group discussions of assigned reading, in-class writing exercises, and discussion of student writing assignments. This course is open to all majors.

ENGL.2390 Introduction to Professional Writing
(Formerly 42.239) - Credits: 3
This course offers an introduction to different types of professional writing, including journalism, technical writing, business writing, and other professional communication. Focus in the course will be on understanding the rhetorical situation, including the audience, purpose, and context of each communication task. Students will learn how to work effectively and ethically in a collaborative and professional environment. Students may not earn credit for both 42.227 and 42.239.

ENGL.2400 Literature and Women (Formerly 42.240) - Credits: 3
A survey of literary attitudes toward women from the Judaic and Hellenic periods through the present.

ENGL.2420 The Heroine in Modern Fiction (Formerly 42.242) - Credits: 3
Provides a study of selected short stories and novels which deal sympathetically with the changing roles of women.

ENGL.2430 Contemporary Women Writers
(Formerly 42.243) - Credits: 3
Contemporary Women Writers introduces students to American women writers of the last fifty years. We examine the historical,socio-cultural, political, and personal influences on these writers’ work by studying trends and events in recent American history and themes reflected in the works. By studying contemporary women’s writing in this contextualized fashion, students can appreciate larger trends in our society, the role writing plays in examining such trends, and the value of literature as an exploration of human growth and struggle. Through discussion, group collaboration, critical analysis, and
by designing their own graphic organizers, students gain a breadth of knowledge in the following areas: the themes and stylistic concerns of contemporary American women writers; the key historical events that influence contemporary American women’s writing; the critical reading of literary texts. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

ENGL.2460 Gay & Lesbian Literature (Formerly 42.246) - Credits: 3
Explores the treatment of homoeroticism and homosexual love in literature from Antiquity to the present. Emphasis is given to texts reflecting the construction of a homosexual identity and recurring motifs among gay, lesbian, and bisexual writers. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

ENGL.2490 Literature on Technology and Human Values (Formerly 42.249) - Credits: 3
A study of the relationship between works of fiction, cultural attitudes toward technology, and social values. Meets Core Curriculum Essential Learning Outcome for Social Responsibility & Ethics (SRE).

ENGL.2500 The Bible as Literature (Formerly 42.250) - Credits: 3
Presents a literary and historical analysis of selected Old and New Testament books.

ENGL.2510 War in Literature (Formerly 42.251) - Credits: 3
In "War in Literature" we will study conflict and human values in times of war, focusing on the literature of World War I, World War II, Vietnam, and the Gulf War. Content covered includes a selection of representative (and divergent) literary texts written throughout the 20th century in a variety of genres (poetry, essays, memoir, short story, novel, and hybrid forms like the "graphic novel"). Meets Core Curriculum Essential Learning Outcome for Social Responsibility & Ethics (SRE).

ENGL.2530 The Culture of American Sport (Formerly 42.253) - Credits: 3
An examination of the history, literature, sociology, and aesthetics of sport. Attention to corollary issues and values including racism, sexism, and violence.

ENGL.2570 The Family in American Literature (Formerly 42.257) - Credits: 3
A study of literary selections dealing with traditions of family life, the individual, and social change. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

ENGL.2580 Disability in Literature (Formerly 42.258) - Credits: 3
This course explores how texts -- including novels, short stories, poems, memoirs, essays, plays, and videos -- portray people with disabilities. We will consider the problematic stereotypes about disabilities that sometimes appear in popular culture and literary depictions, and read texts that provide insight into a diverse community of people with a range of disabilities.

ENGL.2670 Discovering Shakespeare (Formerly 42.267) - Credits: 3
This class introduces students to some of the Bard’s most popular and accessible plays. We will learn to understand Shakespeare’s language and see how the plays were produced in Renaissance England, as well as examine his living legacy, in theater, film, and popular culture, throughout the modern world today. No previous experience with Shakespeare needed. Old Title: Introduction to Shakespeare.

ENGL.2673 Robin Hood: From Outlaw to Icon - Credits: 3
From its medieval origins, the Robin Hood stories developed over centuries from violent rebel to aristocratic hero. This class will explore the English folk tale as it transitioned from stories of men in the forest, to commentary on the clergy and aristocracy, to tales of economic justice as Robin Hood stole form the rich and gave to the poor. The larger part of the class will study the literary and cultural traditions from medieval to nineteenth-century depictions. The latter part will investigate how Robin Hood moved from England to America, and from books to films, culminating in recent Hollywood blockbusters.

ENGL.2675 Vikings - Credits: 3
An introduction to Norse mythology, sagas, and culture. The class will read translations of medieval texts recalling traditions of the old Norse gods and their cults during the Viking Age (ca. 800-1050 AD), as these were preserved in 13th-century Icelandic texts, but also in Latin, Arabic, Old High German, Old Swedish and Old English manuscripts and runic inscriptions. Students will explore the worldview and value system of this unique culture, and examine relations, often violent but sometimes comic or friendly, between groups of highly intelligent, vulnerable beings, both living and dead, male and female, animal and human, god and giant - a crowded universe full of trolls, elves witches, dwarfs, valkyries, berserks,
shapeshifters, and various social classes of human beings.

**ENGL.2720 Modern European Fiction (Formerly 42.272) - Credits: 3**

A study of selected fiction by major continental writers of the nineteenth and twentieth centuries.

**ENGL.2770 American Ethnic Literature (Formerly 42.277) - Credits: 3**

The course addresses the literature of America's immigrant and cultural groups and how it contributes to defining our national character. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

**ENGL.2772 Introduction to Latinx Literature - Credits: 3**

Describing a wide range of racial and ethnic denominations, Latinx is a complicated term which this course will examine the trouble. This course emphasizes the historical and aesthetic networks established in the Latinx literary canon that continue into the present, while also exploring the relationship between genre and socio-historical issues. Reading from a diverse tradition that reflects the contested definition of "Latinx" and its shifting demographics in the U.S., this course investigates how U.S. Latinx literature speaks to and expands "American" literary traditions, and how unique ethnic identities such as the Mexican American, Dominican American, Cuban American, or mainland Puerto Rican offer different yet interconnecting representations of what it means to be Latinx in the U.S.

**ENGL.2810 British Literary Traditions (Formerly 42.281) - Credits: 3**

A survey of British Literary history from the medieval through the modernist periods.

**ENGL.2820 American Literary Traditions (Formerly 42.282) - Credits: 3**

A survey of American Literary history from early contact between Native American populations and European colonists through contemporary American writing.

**ENGL.2830 World Literature in Translation I - Credits: 3**

A survey of world literature (works outside British and American literary traditions) through 1660; all course readings are translated into English. Students will become familiar with conventions of different literary genres, including epic and lyric poetry, drama, fables and folktales, and religious and philosophical texts. The course also provides the major cultural, religious, and political contexts of the literary texts. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

**ENGL.2840 World Literature in Translation II - Credits: 3**

A survey of world literature (works outside British and American literary traditions) since 1660; all course readings are translated into English. Students will become familiar with conventions of various literary genres, including short and long fiction, autobiography, lyric poetry, and drama. The course also provides the major cultural, religious, and political contexts of the literary texts.

**ENGL.2850 Crime in Literature (Formerly 42.285) - Credits: 3**

A study of how various authors use crime as a plotting device to study character, reveal social order, and critique social institutions. This course will focus particularly on detective and mystery fiction, sketching the history and development of these genres. Students might also study fiction and film outside these genres that explore significant questions of crime or criminality. Ultimately, students will think about how fictional representations of criminals, victims, policing, gender, and race relate to cultural assumptions and expectations. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

**ENGL.2860 The Graphic Narrative: Comics in Context (Formerly 42.286) - Credits: 3**

While picture-images date as far back as the Egyptian tombs, or the caves of Lascaux, this course will consider the development of the modern comic in twentieth-and twenty-first century America. Readings will include not just comics, but also the history of comics, art and literary theory, a novel about comics, and articles that consider the legal, political, and social issues surrounding comics. We will also look at traditional and contemporary comic strips and graphic novels to explore what we can learn from them about American Popular Culture. Comics are on the cutting edge of contemporary literature, and there are many avenues to pursue in the study of this narrative form. This course will include intensive reading and writing, and will ask students to engage with demanding theoretical works, in addition to incorporating a considerable amount of research. While the subject matter can be lighthearted the course takes these texts seriously, and asks for intellectual engagement with the issues and concerns of culture depicted in these words and pictures. (Full proposal and supplemental material available).
ENGL.2910 History of English Literature I (Formerly 42.291) - Credits: 3
A survey of representative writers and works from the Anglo-Saxon period to the mid-seventeenth century.

ENGL.2920 History of English Literature II (Formerly 42.292) - Credits: 3
A survey of representative writers and works from Milton into the twentieth century.

ENGL.2940 History of American Literature I (Formerly 42.294) - Credits: 3
Studies the historical development of American literature from the Colonial period to the Civil War. Selected works by representative authors from each period are studied.

ENGL.2950 History of American Literature II (Formerly 42.295) - Credits: 3
Studies the historical development of American literature from the Civil War to World War I.

ENGL.2980 Children's Literature (Formerly 42.298) - Credits: 3
A survey course covering traditional and contemporary children's literature. Texts are selected to represent different historical periods and a diversity of authorial perspectives. Attention is given to changing views of children and childhood as reflected in selected texts.

ENGL.3000 Intro to Journalism (Formerly 42.300) - Credits: 3
An introduction to techniques of writing for the news media.

ENGL.3020 Creative Writing: Fiction (Formerly 42.302) - Credits: 3
Studies the theory and practice of fiction. Conducted as a workshop with close analysis of student work.

ENGL.3030 Creative Writing: Poetry (Formerly 42.303) - Credits: 3
Discusses the theory and practice of poetry. Conducted as a workshop with close analysis of student work.

ENGL.3040 Creative Writing: Playwriting (Formerly 42.304) - Credits: 3
Studies the theory and practice of playwriting. Conducted as a workshop with close analysis of student work.

ENGL.3050 Reviewing the Arts (Formerly 42.305) - Credits: 3
Theory and practice of writing short, critical essays in a journalistic mode on the visual and performing arts. Special attention to theater, movie, and television criticism. Conducted as a workshop with close analysis of student work.

ENGL.3060 Intermediate Professional Writing (Formerly 42.306) - Credits: 3
This course develops more advanced skills in professional writing and communication. Students will focus on analyzing and responding to professional writing situations, in which they will consider purpose and audience. Students will work in a collaborative and professional environment. This course may include a service-learning component. Contact the instructor for more information.

ENGL.3070 History of the English Language (Formerly 42.307) - Credits: 3
Explores the origins and structure of the English language, tracing the ways that English has evolved from Old English through Middle English to the varieties of Modern English in England and its former colonies, including the United States. We will also examine the literary, social, and political implications of these developments, for instance the evolution of Standard English or the use of dialects. The course does not assume any knowledge of Old or Middle English.

ENGL.3080 Structure and Variation of the English Language - Credits: 3
This course introduces students to a variety of approaches to the contemporary English language, with a focus on both structure and variation. Students will explore how English works in terms of its sounds (phonetics and phonology), words (morphology), sentence structures (syntax), meanings (semantics), and uses (discourse). Areas of variation may include social and regional dialects, World Englishes, accents, pidgins, creoles, multilingualism, language acquisition, registers, style, literacy, media, power, and identity. The course will also address attitudes towards language (language ideology), and the implications of language issues for education, work, policy, and everyday life.
ENGL.3100 Writing Popular Fiction (Formerly 42.310)  
- Credits: 3
This course is designed for students who are interested in writing in one or more of the popular forms of genre fiction: the mystery, the horror story, science fiction, fantasy, romance, and the thriller. Class time will be spent discussing and workshopping student writing. Some time will also be devoted each week to brief lectures on practical matters like choosing between the short story and the novel, finding ideas, constructing plots, building characters, pacing, generating suspense, and marketing one’s work. In addition, there will be assigned readings to illustrate the above.

ENGL.3110 The South in American Literature  
(Formerly 42.311) - Credits: 3
A study of the writers, movements, and social culture of the South, from both the nineteenth- and twentieth-centuries.

ENGL.3120 Literature of Colonial America (Formerly 42.312) - Credits: 3
This course will explore the literatures (including some selections in translation) written during America’s colonial era. The periods of exploration, first encounters, settlement, the rise of Anglo-America, the emergence of a national sensibility, and the years of transition in the new republic will be considered. The course will also treat a small selection of nineteenth century texts that present visions and re-visions of the colonial past.

ENGL.3125 Literature of New England Witch Trials - Credits: 3
This course focuses on accounts of witchcraft and witchcraft trials, including traditions imported from England and both little-known and infamous cases in the American colonies. We’ll read original court transcripts and non-fiction, fiction, and poetry about the trials created during the period and down through to the present day. Notable cases to be discussed include The Witches of Warboys, England (1593), Mary Parsons of Northampton, Massachusetts (1656, 1674), Mary Webster of Hadley, Massachusetts (1683), the Connecticut Witchcraft Trials (1647 to 1663), and the Salem Witch Trials (1692), Authors include Cotton Mather, Benjamin Franklin, Nathaniel Hawthorne, Elizabeth Gaskell, and Margaret Atwood. Students will write several short papers and develop a final project of their own design.

ENGL.3130 Realism and Naturalism American Fiction (Formerly 42.313) - Credits: 3
A study of realism and naturalism in fiction from the end of the Civil War to World War I.

ENGL.3150 Old English Language and Literature  
(Formerly 42.315) - Credits: 3
Students will acquire reading knowledge of the Old English Language, spending half the semester mastering grammar and vocabulary, and the second half translating texts such as The Wanderer, Dream of the Rood, and Beowulf. Attention will also be given to early medieval cultures in England.

ENGL.3154 Middle English: Literature and Language (1066-1500) - Credits: 3
England in the 11th century had a multi-lingual and diverse culture, with French, German, Scandinavian, and Latin speakers interacting daily. By 1500, England was English-speaking, with various dialects of Middle English emerging from this linguistic mix. In this class, students will learn to read and analyze the dialects of Middle English, translating text such as Sir Gawain and the Green Knight, the Harley Lyrics, the York Plays, and the Canterbury Tales from their original language. We will learn and apply the rules of grammar, pronunciation, and vocabulary. Students will analyze critically questions of creolization, dialect and social class, and the emergence of print culture.

ENGL.3170 British Literature of the Twentieth Century  
(Formerly 42.317) - Credits: 3
A study of twentieth-century British short stories, poetry, and drama.

ENGL.3200 Personal and Reflective Writing (Formerly 42.320) - Credits: 3
A workshop format encourages peer criticism of individual writings and discussion of models from various texts.

ENGL.3210 Community Writing I (Formerly 42.321) - Credits: 3
Students work on various writing projects the professor brings into the classroom on behalf of local non-profit organizations. This service learning course provides opportunities for students to learn through thoughtful engagement with the community, applying knowledge of writing gained in the classroom to real world problems. The course will be held in a workshop format with strong emphasis on revision.

ENGL.3220 Creative Writing: Creative Non-fiction I  
(Formerly 42.322) - Credits: 3
An intermediate level creative writing workshop in nonfiction (personal essay, memoir, literary journalism, etc.).

ENGL.3240 Writing About Place (Formerly 42.324) - Credits: 3

Writers throughout time have been thoroughly grounded in place. Students in this course will read and write on a variety of topics: travel, cities, suburbs, dwelling places, nature, environmental issues, etc., in a variety of genres: creative non-fiction, essays, journalism, short stories, poetry, journals. This course will be held in a workshop format with strong emphasis on revision.

ENGL.3245 Writing about the Environment - Credits: 3

From John Muir to Rachel Carson to Bill McKibben, environmentalists have traditionally relied upon the power of their prose to transform the thoughts and behavior of their contemporaries. Forming the premise that writing is a form of environmental action, this course introduces students to a range of modes of writing in environmental studies. In the process of reading, discussing and practicing different kinds of environmental writing, students will develop a variety of writing skill in addition to an appreciation for writing as an important form of environmental action.

ENGL.3250 The Rise of the Novel (Formerly 42.325) - Credits: 3

A study of the British novel in the eighteenth century, as it increased significantly in publication, sales, and cultural prominence. We explore the relation between formal elements (narrative, dialogue, plotting), philosophical questions (the nature of the self, the good society), and cultural and historical contexts (industrialization, middle class culture, the sexual double standard). Along with canonical authors such as Defoe, Richardson, and Austen, students will read other popular novels form the period, as well as texts such as spiritual autobiographies, criminal profiles, and advertisements.

ENGL.3270 Victorian Fiction (Formerly 42.327) - Credits: 3

A study of fiction from 1837 through 1901. May include reading and writing about texts by Dickens, Collins, Gaskell, Bronte, Eliot, Thackeray, Trollope, Hardy, Wilde, and others.

ENGL.3280 Writing About Women (Formerly 42.328) - Credits: 3

Writing About Women

ENGL.3300 Twentieth Century British Novel (Formerly 42.330) - Credits: 3

A study of the novel from Conrad through Greene and others.

ENGL.3310 American Novels to 1900 (Formerly 42.331) - Credits: 3

with the emergence of novels labeled "American," novelists explored the role of the frontier, the shift from an agricultural to an industrial society, the rise of social reform movements, the impact and legacy of slavery, the influence of science and technology, the debate over gender roles and expectations, and the role of the artist/writer within American culture. The novels in this course, all written before 1900, allow us to explore the issues that a selection of American novelists treat within their fiction as well as to consider the debates that occurred over the nature of narrative.

ENGL.3320 Twentieth Century American Novel - Credits: 3

A study of the American novel from 1900 to the present.

ENGL.3325 Banned Books - Credits: 3

This course examines novels that are among those most frequently challenged, censored, or banned from schools, colleges, and libraries in the United States. Many of these books are considered modern literary classics, and several of them have won prestigious awards. But these books also contain language and ideas that have sometimes been considered politically subversive, socially disruptive, sexually explicit, or offensive. In addition to the novels, course topics include the history of censorship and current debates about freedom of expression and literary value.

ENGL.3330 American Autobiography (Formerly 42.333) - Credits: 3

A Study of autobiographical writing from Colonial America to the present. Works from the 17th to the 21st century will allow students to explore the genre of autobiography and related sub-genres, including the captivity narrative, the slave narrative, and the immigration narrative. Readings will also explore literary and political autobiographies. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA) and Social Responsibility & Ethics (SRE).

ENGL.3332 Autobiographies of Paris Modernism - Credits: 3

Students in this course study autobiographies of important
figures of modernism in Paris and can expect to learn about the
genre of autobiography and modernism as an artistic
movement, particularly how modernist ideals manifested across
several genres.

ENGL.3350 American Women Novelists (Formerly
42.335) - Credits: 3

A study of selected novels by American women. Focus on the
female voice within the American tradition. Treatment of such
issues as domesticity, education, and authorship. Meets Core
Curriculum Essential Learning Outcome for Diversity and
Cultural Awareness (DCA) and Social Responsibility &Ethics
(SRE).

ENGL.3360 Beowulf and Heroic Literature (Formerly
42.336) - Credits: 3

We will read Beowulf in translation, and discuss contemporary
approaches to the poem. We will also study other Old English
works such as Judith, as well as Frankish and Old Norse-
Icelandic literature in translation to gain a cultural context for
Beowulf. May include discussion of how later works, such as
those of J.R.R. Tolkien or modern fantasy writers have been
influenced by these medieval epics.

ENGL.3370 The Gothic Tradition in Literature
(Formerly 42.337) - Credits: 3

This course will consider works that fall under the very broad
genre known as "The Gothic." As this genre is one of highly
contested boundaries, we will consider how to define the
Gothic, and what exactly constitutes this form. We will look at
texts from both England and America, and spanning from the
late 18th century to our own times. Our study will focus on the
form of the novel, and the development and emergence of the
gothic novel from its beginnings in England to its
contemporary manifestations in the United States.

ENGL.3380 Medieval Women Writers (Formerly
42.338) - Credits: 3

Women have always written and read and participated in
culture. This class will explore writings on literary and non-
literary genres by woman in the European Middle Ages (600-
1500). Students will learn how different pre-modern cultural
conditions affected the possibilities for women's authorship,
readership, and patronage. We will also examine how women
writers interacted with literary traditions and constructions of
gender.

ENGL.3410 Studies in Film (Formerly 42.341) -
Credits: 3

A rigorous examination of a topic of current interests in film
studies organized by particular themes, genres or filmmakers.

ENGL.3411 International Cinema Studies: French New
Wave - Credits: 3

This course will introduce students to the aesthetic and
theoretical qualities that define the New Wave movement in
French cinema, focusing on major directors, performers, and
composers associated with the New Wave. Through the close
intertextual comparison of a range of films contextualized
through the historical lens of 1960s Paris, students will develop
sophisticated analyses that combine elements of film theory and
cultural studies. This semester, we will read contemporary
criticism, manifestos, mid-century French philosophy, and
secondary scholarly studies to ground our discussions and
writing in appropriate historical and theoretical context.

ENGL.3420 Women Writers and the Past (Formerly
42.342) - Credits: 3

Women Writers and the Past. Meets Core Curriculum Essential
Learning Outcome for Diversity and Cultural Awareness
(DCA) and Social Responsibility &Ethics (SRE).

ENGL.3440 Women in Theatre (Formerly 42.344) -
Credits: 3

A study of the significant contributions of women to the
literature and art of the theatre in various periods and cultures.
Topics may include: plays written by women, the progress of
women in theater, the evolution of female roles, and the
portrayal of feminism on the stage.

ENGL.3450 British Women Novelists (Formerly
42.345) - Credits: 3

Selected novels by writers such as Austen, the Brontes, Eliot,
Woolf, Bowen, and Drabble. Meets Core Curriculum Essential
Learning Outcome for Diversity and Cultural Awareness
(DCA) and Social Responsibility &Ethics (SRE).

ENGL.3460 Homer's Iliad and Odyssey (Formerly
42.346) - Credits: 3

This class will explore the story of the ancient city of Troy
from its origins in Homeric epic and classical drama to some of its
many European iterations beginning with Vergil's Aeneid.
Students will examine how these Trojan texts encode narratives
of gender, ethnicity, and welfare, and how they help create an
occidental European identity.

ENGL.3480 Modern American Drama (Formerly
42.348) - Credits: 3
A study of such playwrights as O'Neill, Odets, Wilder, Williams, and Miller.

ENGL.3490 Arthurian Literature (Formerly 42.349) - Credits: 3
Will examine works in modern English translation from a variety of genres (romance, history, tragedy, epic) that tell stories of the mythical King Arthur and the knights and ladies of his courtly world. The course will focus primarily on texts of the medieval and renaissance periods, but will include attention to nineteenth- and twentieth-century versions in poetry, prose, art, music and film.

ENGL.3510 Literature of the Middle Ages (Formerly 42.351) - Credits: 3
This course will examine a variety of medieval genres: epic, chanson de geste, romance, fable, lyric, and drama. We will analyze the circumstances under which the works were produced (orally and in manuscript) and imagine how they may have been read by men and women in their day. Texts are selected from the courtly pursuits of the aristocrats and from the popular, religious rituals and writings of the rising merchant class. We will also give some attention to medievalism, that is, how the middle ages have been perceived and transformed by contemporary cultures.

ENGL.3520 Renaissance Literature (Formerly 42.352) - Credits: 3
A study of English prose and poetry of the period.

ENGL.3530 Literature of the Seventeenth Century (Formerly 42.353) - Credits: 3
A study of English prose and poetry of the period excluding Milton.

ENGL.3550 Literature of the Romantic Period (Formerly 42.355) - Credits: 3
A study of English prose and poetry from 1798-1832.

ENGL.3560 Literature of the Victorian Period (Formerly 42.356) - Credits: 3
A study of British fiction, poetry, and prose from 1837 to 1901.

ENGL.3600 Medieval & Renaissance Theater (Formerly 42.360) - Credits: 3
A study of Medieval mystery cycles, morality plays, interludes, and other forms of popular and court theater.

ENGL.3610 Restoration Comedy (Formerly 42.361) - Credits: 3
A study of comic plays from 1660 to the mid-eighteenth century. Focus on the works of Ethridge, Wycherley, Congreve, and Sheridan.

ENGL.3620 Modern Drama (Formerly 42.362) - Credits: 3
A study of selected Continental, British and American plays of the late nineteenth century to the present.

ENGL.3630 English Renaissance Drama (Formerly 42.363) - Credits: 3
A study of major dramatists of the Age of Shakespeare including Marlowe, Dekker, Webster, Jonson, Beaumont and Fletcher, Massinger, Ford and others

ENGL.3640 African American Drama (Formerly 42.364) - Credits: 3
A study of the history and development of African American drama, with emphasis on major aesthetic, political, and social movements in African American culture. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA) and Social Responsibility & Ethics (SRE).

ENGL.3660 Creative Writing: Poetry II (Formerly 42.366) - Credits: 3
Combines discussion and critique of student poems with readings in contemporary poetry and poetics. The focus is on enabling students to develop their individual voices, forms, and subjects.

ENGL.3680 Feature Writing (Formerly 42.368) - Credits: 3
This writing-oriented course will focus on learning how to write feature stories for newspapers, magazines, and the Internet.

ENGL.3685 Sports Writing - Credits: 3
This course will explore the practice, theory, and context of sports writing. In the course, students will write in a variety of sports related genres: the game story, the feature, and the column, as well as online related work, such as a blog. The course will also discuss the meaning of sports; Sports writing often covers subjects that range beyond its genre, which is why it can be so evocative, funny, sad and profound.

ENGL.3690 Reading and Writing New Media (Formerly 42.369) - Credits: 3
This course will focus on learning how to write for electronic media and understanding the changing world of journalism.

ENGL.3691 History and Theory of Media - Credits: 3
In this course, students will explore the history of media to better understand the relationship between technology and public discourse. Throughout the semester, students will examine online archives featuring material from a variety of new and old media. Class meetings will be devoted to the examination of several shared case studies to introduce students to primary source research. Throughout the semester, students will conduct a series of small investigative projects.

ENGL.3700 Contemporary American Fiction (Formerly 42.370) - Credits: 3
Discusses novels and short fiction from World War II to the present.

ENGL.3710 The Literature of the Beat Movement (Formerly 42.274/ENGL.2740) - Credits: 3
Explores both the writings and the personal lives of a loose confederation of poets, novelists, and essayist who emerged onto the American literary and cultural scene following World War II and who came to be known as the Beat Generation. The primary focus will be on the life and writings of Lowell native Jack Kerouac (1922-1969) with others of the Beat circle including as well, i.e., Allen Ginsberg, William Burroughs, Diana DiPrima, etc.

ENGL.3730 Modern Poetry (Formerly 42.373) - Credits: 3
A study of the development of British and American poetry from 1900 through World War II.

ENGL.3740 Contemporary Poetry (Formerly 42.374) - Credits: 3
A study of selected British and American Poets since World War II.

ENGL.3750 Modern Irish Literature (Formerly 42.375) - Credits: 3
Poetry, drama, and prose fiction from the Irish literary renaissance to the present. Writers will include Yeats, Joyce, O’Casey, Friel and Heaney.

ENGL.3760 African-American Literature (Formerly 42.376) - Credits: 3
A study of selected works by black American writers, such as Toomer, Wright, Ellison, Walker, and Morrison. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA) and Social Responsibility & Ethics (SRE).

ENGL.3770 Theories of Rhetoric and Composition (Formerly 42.377) - Credits: 3
This course will examine the history and theories of composition and rhetoric, studying the field from its inception to more recent developments and challenges. We will also explore our own writing processes and literary practices. The course is furthermore grounded on the idea that literary practices are shaped by our culture. The course introduces practical approaches to as well as theoretical frameworks beneficial for those interested in composition studies. Meets Core Curriculum Essential Learning Outcome for Applied & Integrative Learning (AIL).

ENGL.3780 Asian American Literature (Formerly 42.378) - Credits: 3
Asian Americans hold an intriguing place in the cultural imagination: as perpetual foreigners, as so-called 'model minorities' that serve to maintain hegemonic power relations, and as living embodiment of America's memory of its involvement in recent wars. As artists, however, Asian
Americans have contributed an impressive body of literary work, and we'll examine some of the most enduring and provocative of these texts. We'll explore themes such as trauma and the immigrant experience, issues of exile and dislocation, Asian Americans' embattled place in our country’s history, and the intersections of race and ethnicity with gender and sexuality. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA) and Social Responsibility & Ethics (SRE).

ENGL.3790 Postcolonial Literature (Formerly 42.379)  
- Credits: 3

When the peoples of Africa, India, the Caribbean, Ireland, and Canada finally gained, to a greater and lesser extent, independence from the British during the 20th century, they found that their national, cultural, and individual identities had been radically altered by the experience of colonization. In this course, we will examine how authors have related this postcolonial condition. We will examine a diverse body of texts--poetry which eloquently describe the heroic journey out of colonialism, drama which lays bare the conflicts of assimilation, and novels which fantasticaly present political struggle--as we determine how postcolonial theory and literature affects and possibly redefines all literature.

ENGL.3795 Literature of the Americas - Credits: 3

A course that introduces students to literary works across the hemisphere by considering their different, interrelated times, geographies, and languages. The course practices and up-to-date American literary study, one in which "America" signifies not just the United States, but, within and beyond the territorial boundaries of the U.S., other modalities of knowing, being, and collectivity in the hemisphere--and, indeed, the world.

ENGL.3800 Travel Literature - Credits: 3

We all yearn to travel. But why? In this course, we will investigate this question by not only studying works of travel writing (supposedly non-fiction travel accounts written by those who have done the journeying), but also other works of literature and culture in which travel is a significant theme. Our reading will cover a diversity of writers from around the globe and from different periods in history and we will pay particular attention to the interrelationship amongst the key issues of representation, power, and identity as we consider travel literature alongside interdisciplinary theories about travel and tourism.

ENGL.3820 Theatre History I: Ancient Greece through the 18th Century (Formerly 42.382) - Credits: 3

A survey of ancient to early modern theatre in its historical and social contexts, tracing changes and developments in acting styles, theatre architecture, scenic practices, dramatic literature, and the audience. The course examines how theatre both reflects and shapes the changing beliefs and priorities of a culture.

ENGL.3830 Theatre History II: Nineteenth Century to the Present (Formerly 42.383) - Credits: 3

A survey of theatre in its historical and social contexts from the 19th century to the present, focusing on innovations in design and technology, the advent of the director, the emergence of modern schools of acting, and the creation of new forms of theatre to suit the changing needs of a modern world.

ENGL.3860 Editing: Grammar and Style (Formerly 42.386: The Science of Editing) - Credits: 3

The course will examine the varied editing roles in a publishing company, from acquisitions to copy editing.

ENGL.3870 Introduction to Editing and Publishing (Formerly 42.387) - Credits: 3

Designed for students considering a career in book publishing, this course provides an overview of the publishing industry. You will examine the stages of the book publishing process from acquisition to bound book or e-book, using assignments and examples from school, college, and trade book publishing. You will also consider the specific responsibilities of an editor. The course includes class visits by authors, editors, or publishing executives, as well as a trip to a local printing company.

ENGL.3880 Undergraduate Seminar on the Teaching of Writing (Formerly 42.388) - Credits: 3

Training in writing theory for direct application in peer tutoring. Discussion supplemented by experimental exercises, class presentations, reading, and writing. Meets two hours each week. Students tutor four hours each week.

ENGL.3910 Writing on the Job (Formerly 42.391) - Credits: 3

A study of special problems of writing in business from memos and press releases through reports and proposals, including strategies for correspondence, presentation of complex information, and writing for diverse audiences. For English majors and minors.

ENGL.3920 Visual Rhetoric (Formerly 42.392) - Credits: 3
This course introduces students to the theory and practice of visual communication. Students will explore what scholars mean by terms such as visual rhetoric and visual literacy in order to think concretely about how these concepts apply to the communication practices they will engage in their academic, professional, and everyday life. Special attention will be paid to the ways in which visual representations communicate culturally-specific meanings about race, gender, class, sexuality, age, nationality, and difference. Assignments include contributions to a course blog, rhetorical analyses of visual texts, design modules, and a multimodal project.

ENGL.3925 Rhetorics of Social Movements - Credits: 3

This course examines the communication strategies used to build social movements and agitate for social change: What genres and persuasive tactics are used to identify social problems and attract people to participate in a social movement? What means of communication sustain the energy around and investment in social movements? How do people use language to silence or otherwise reject calls for social change? What role do journalists play in bringing attention to social movements? Students are introduced to social movement studies and analyze the rhetoric of historical movements in order to ultimately evaluate the persuasive strategies used in social movements happening today.

ENGL.3950 Special Topics in English (Formerly 42.395) - Credits: 3

This course focuses on the exploration of thematic or issue-oriented or timely topics of interest. The precise topics and methods of each section will vary. Barring duplication of topic, the course may be repeated for credit.

ENGL.3952 Topics in Latinx Literature and Culture - Credits: 3

This course focuses on thematic or issue-oriented topics in Latinx literature and culture. Topics and methods will vary each section, but topics might include: "Monsters, Hauntings, and the Nation," which examines Latinx horror to understand how the genre addresses the unique experience of Latinx people in the Americas. Reading from a wide variety of Latinx texts, students will gain a deeper understanding of the capacities of horror to depict the foundational yet spectral presence of Latinx people in the "American" imaginary.

ENGL.3953 Topics in Multiethnic Literature and Culture - Credits: 3

This course explores thematic or issue-oriented topics in multiethnic literature and culture. The precise topics and methods of each section will vary.

ENGL.4010 Selected Authors (Formerly 42.401) - Credits: 3

A study of selected works. Authors to be announced each semester.

ENGL.4020 Topics in Writing (Formerly 42.402) - Credits: 1-3

A study of issues and the practice of skills needed in specific areas of professional writing. Topics to be announced each semester.

ENGL.4060 Community Writing II (Formerly 42.406) - Credits: 3

Students work for a local non-profit for the semester completing a variety of writing tasks, depending on the placement. In class students apply the principles of rhetoric and use the tools of research and revision to write effectively for their community partner; to articulate in a public presentation a thoughtful, intelligent position on relevant social policy; and to become more active, engaged citizens.

ENGL.4065 Grant Writing - Credits: 3

Professionals in a number of careers need to be able to use writing to fund-raise their non-profit organization, business, school, governmental office, and creative enterprises. Students in this class will gain a solid understanding of how one writes a grant form start to finish. This is a hands-on, workshop class with a strong emphasis on process and reflection about learning and civic engagement.

ENGL.4070 Creative Writing Fiction II (Formerly 42.407) - Credits: 3

Creative Writing Fiction II

ENGL.4080 Principles of Technical Writing (Formerly 42.408) - Credits: 3

Provides the fundamental concepts and principles of technical writing, including technical description, audience analysis, editions, document specifications and outlines, graphics, definitions and revising documents. Writing assignments include preparing a document specification, editing and creating graphics.

ENGL.4130 Advanced Software Writing (Formerly 42.413) - Credits: 3
Introduces a range of advanced topics in software writing. Topics may include electronic publishing, hyper text, advanced graphics, document set components, and working in project teams. In this course, the student selects some aspect of the computer industry that interests him/her and documents it.

ENGL.4150 Young Adult Literature - Critical Methods (Formerly 42.415) - Credits: 3

Using young adult literature as a vehicle, this course considers traditional methods of interpretation and evaluation. Particular attention is given to the analytical, psychological and sociological approaches.

ENGL.4180 Creative Writing: Creative Non-fiction II (Formerly 42.418) - Credits: 3

An advanced creative writing workshop in nonfiction (personal essay, memoir, literary journalism, etc.).

ENGL.4230 Shakespeare I (Formerly 42.423) - Credits: 3

A study of selected histories, comedies, and tragedies. Meets Core Curriculum Essential Learning Outcome for Information Literacy (IL) and Written & Oral Communication (WOC).

ENGL.4240 Shakespeare II (Formerly 42.424) - Credits: 3

A study of selected histories, comedies, and tragedies not covered in 42.243. Shakespeare I is not a prerequisite.

ENGL.4270 Virginia Woolf - Credits: 3

The purpose of this course is to explore a range of works by Virginia Woolf (1882-1941), one of Britain's most innovative writers of fiction and criticism, who also significantly shaped the contours of twentieth- and twenty-first-century English feminism. We will read selections from Woolf's writings in several genres, as well as one important recent example of Wool-centric biofiction.

ENGL.4280 The Harlem Renaissance - Credits: 3

This course will introduce students to African-American fiction, drama, poetry, nonfiction, art, music, and film of the Harlem Renaissance. The Harlem Renaissance marks a seminal historical moment in which writers, musicians, and artists of the African Diaspora (particularly African-Americans, West Indians, and Africans) produced a complex body of written and visual text that drew upon the complexities of black life.

ENGL.4290 Introduction to Literary Theory (Formerly 42.429) - Credits: 3

A solid introduction to major trends in contemporary critical theory. Emphasis on producing a sample critical paper treating one or more current critical approaches to reading a literary text.

ENGL.4320 Introduction to Digital Humanities - Credits: 3

This course is an introduction to the field of digital humanities, which explores interpretive questions about history, culture, and meaning using computational analysis, data visualization, and the critical analysis of technology. We will focus on how computers and digital technologies are used to preserve, analyze, and create works of literature. Students will learn how to use different digital methods and will design and complete a digital project related to their own interests. No programming experience is required.

ENGL.4350 Literary Journalism (Formerly 42.435) - Credits: 3

This course that looks at the genre of Literary Journalism, a largely American innovation in literature that developed in the late 19th and 20th centuries. Students will closely read and discuss books and articles by literary journalists, seeking to understand the genesis and shifts of this hybridized form (literary techniques applied to true or fact-based stories), and the contributions literary journalism is making to literature, to documentary and witness narratives, to historical records, and to the notions of truth reportage.

ENGL.4360 Writing About Culture (Formerly 42.436) - Credits: 3

In this course, students will write about local culture, using a mix of first-hand observation, archival research, and/or contextual or geographic readings of culture of literature produced in the region. This course is designed to serve as a course in a study abroad program or one that focuses on regional authors such as Jack Kerouac or Henry David Thoreau.

ENGL.4370 Newspaper Editing (Formerly 42.437) - Credits: 3

This course will explore the techniques of putting together a student newspaper, focusing on everything from brainstorming for coming up with stories, to writing and editing them, writing headlines and captions, and design and layout. The course also discusses the nature of journalism audiences. It also discusses the practicalities of applying for journalism jobs and writing query letters for freelance writing.
ENGL.4375 Writing a Book - Credits: 3
In this course, students will learn about the methods of writing and publishing a book and put those lessons to work in writing their own work in a genre of their choice.

ENGL.4500 Creative Writing: Capstone (Formerly 42.450) - Credits: 3
In this intensive workshop course, upper-level students in the creative writing concentration work for an entire semester on a reading and longer-form writing project in one of three genres - poetry, fiction, or creative nonfiction. Students devise reading lists specific to their writing projects, with instructor's guidance. Through a creative process that involves planning and drafting, peer workshop, instructor feedback, and rigorous revision, students ultimately create portfolios that represent their best undergraduate writing.

ENGL.4790 Literature Seminar (Formerly 42.479) - Credits: 3
An advanced course that explores a variety of issues and topics in literature, literary history, and related fields. The topic or issue for a specific seminar will be announced in advance.

ENGL.4900 Directed Studies in Writing (Formerly 42.490) - Credits: 1-3
The student develops a plan for a sustained writing project or portfolio and submits preliminary and final versions for critique and evaluation.

ENGL.4910 Directed Study in Literature (Formerly 42.491) - Credits: 1-3
The student develops a plan of directed reading, defines a problem for individual research, and prepares a paper or papers.

ENGL.4920 Directed Study in Language Analysis (Formerly 42.492) - Credits: 1-3
The student develops a plan of directed readings in linguistics, semantics, or stylistics and defines a topic for individual research.

ENGL.4930 Directed Study in Creative Writing (Formerly 42.493) - Credits: 1-3
The student develops a series of projects in creative writing and composes poetry, fiction, or drama.

ENGL.4960 Internship I (Formerly 42.496) - Credits: 3
Internship experience (usually off-campus) gives English majors the opportunity to apply their skills in actual business, technical, educational, or professional situations. Classroom time supports student professionalization and career development. Topics include resumes, cover letters, networking, LinkedIn profiles, portfolios, and professional behavior and expectations.

ENGL.4970 Practicum (Formerly 42.497) - Credits: 1-3
An off-campus professional experience for English Majors, Minors, and BLA English Concentrators. The Practicum is intended to provide students with the opportunity of applying their writing skills in actual business, technical, educational, or professional situations. By permission only.

ENGL.4980 Practicum-English Study (Formerly 42.498) - Credits: 1-3
A short-term, intensive project related to English study and/or writing.
GNDR.2000 Special Topics in Gender Studies (200-level) (Formerly GNDR 200)(Never Offered) - Credits: 3

“Special Topics in Gender Studies” (200-level) offers students the opportunity to study a topic of special interest in the field of Gender Studies from an interdisciplinary perspective. The content and approach will vary depending upon the research and teaching interests of the faculty member teaching the course.

GNDR.2400 Introduction to Gender Studies (Formerly GNDR 240) - Credits: 3

This course is an interdisciplinary introduction to the field of Gender Studies that examines both commonalities and differences among diverse groups of women. A variety of topics are presented such as past and present stratification in work and family, sexual identities, medial representations of women, and violence against women. Social movements for women’s equality and feminist theories and methods are also introduced.

GNDR.4010 Gender Studies Practicum (Formerly GNDR 401) - Credits: 1-3

This course provides a link between the UMASS Lowell campus and the community, offering students a unique learning experience. This Community Service-Learning course provides opportunities for students to learn through thoughtful engagement in community service, applying knowledge of gender issues gained in the classroom to the world outside the classroom. Students and their faculty supervisors together will determine the kind of service work students will engage in during the semester, choosing from a wide range of available placements. They will be using their hard-won knowledge from their years in the classroom and applying it to help meet urgent needs in the he community. Students will have the opportunity to make lasting connections and effect positive change in our community. Ideally, this course will promote good citizenship through reflection on gender issues and testing of personal values, leading students toward a heightened sense of social responsibility and a lifelong commitment to their local, national, and global communities.

GNDR.4100 Directed Studies (400-level) (Formerly GNDR 410) - Credits: 1-3

This course, taken for 1 or 3 credits, may serve as a capstone experience for advanced gender studies students, helping them to explore a gender-related topic of interest while working closely with a faculty member. Projects that students complete for the Directed Studies will vary in length, scope, and topic, depending on how many credits are taken and which faculty member the student agrees to work with the student. What all projects will have in common is (1) a topic clearly relevant to gender studies, (2) an emphasis on achieving deep learning through advanced study, and (3) the integration of two or more distinct disciplines, integrating these disciplinary insights in order to solve a complex problem or analyze a complicated issue. This course allows for a student and professor to work closely together on a project of mutual interest. It is expected that the faculty member will be supporting and guiding the student’s work, and thus regular meetings will be necessary. In some cases the faculty member may not feel competent to oversee all aspects of a project in which an unfamiliar discipline is employed. In such cases, a second (and even third) faculty member may be asked to participate in the Directed Study as a consultant and final reader.
College of Fine Arts, Humanities & Social Sciences

Degree Pathways are a sample semester-by-semester sequence of courses which might be followed for successful completion of a degree, diploma, credential or certificate from the university. Students should follow the degree pathway appropriate to their catalog year. A student's catalog year is typically defined by the date of their entry into the University of Massachusetts Lowell.

American Studies

- **General Option**

HIST.1010 Classical Civilization (Formerly 43.101) - Credits: 3

This course provides an introduction to the Ancient Near East, Greece and Rome. The class first examines the formation of urban centers and the evolution of civilization as the late Bronze Age world transforms into the Iron Age with the creation of the vast empires such as Assyria and Achaemenid Persia. The course then focuses on the development of Greek city-states and the ideological differences between Athens and Sparta with a brief exploration of Classical Greed culture. Finally the class looks at the conquests of Alexander and his successors in the East, and the development of Rome as it shaped and was shaped by the cultures it conquered. The course requires short analytical papers, exams, and historical analysis of primary sources.

HIST.1050 Western Civilization I (Formerly 43.105) - Credits: 3

This course surveys some important issues and tendencies in the history of Western Civilization from its origins through the early modern period, including ancient Mesopotamia, classical Greece and Rome, the Middle Ages, and the Renaissance. These include "civilization" and the rise of cities, different imaginings of god(s) and humanity, evolving forms of political organization, continuity and change in social organization and everyday life, and the ongoing dialogue of faith and reason. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

HIST.1100 United States History to 1877 (Formerly 43.111) - Credits: 3

This course surveys United States history from the early settlement of North America through the Civil War and Reconstruction. It considers the role of the political and economic leadership in the building of the nation as well as actions of ordinary people whose energies and aspirations constitute the fabric of United States society. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

HIST.1120 United States History since 1877 - Credits: 3

This course surveys the history of the United States from the end of Reconstruction to the present. It covers significant developments in the politics, economy, culture, and other aspects of American life during that period. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

HIST.2000 Early Christianity (Formerly 43.200) - Credits: 3

This course serves as an introduction to the first 800 years of Christian history. It will begin with an introduction to the Apostolic Church of the first century (and its Jewish/Greco-Roman background) and conclude with an introduction to the Eastern Orthodox Church of Late Antiquity. The course will also cover popular topics like "Gnosticism," "Women in Early Christianity," and "Early Christian Worship and Art."
This course serves as an introduction to religion in medieval Europe (ca. 500-1500), that is, the Roman and Eastern traditions of Christianity, Christian movements deemed “heretical” by “orthodoxy,” Judaism, and Islam. Understanding the medieval history of these religions results in our gaining not only a comprehension of their individual developments but also how the three great monotheistic faiths have become some of the most powerful religious forces ever seen in civilization. These different religions will be treated not only individually but also in dialogue with one another.

HIST.2040 China & the Modern World (Formerly 43.204) - Credits: 3

This course introduces China’s interactions with the world since the 1840s. With the Opium War as the starting point, students are ushered into a traditional China whose political system, cultural values, and an economic structure stood in sharp contrast to those of the outside world. The main focus of the course is to explore the process in which China fought for its survival as a sovereign nation and searched for its road to modernization.

HIST.2070 Women in China (Formerly 43.207) - Credits: 3

From Confucian texts to current conditions, the course examines the evolution of Chinese women’s status throughout the centuries. The course will ask questions such as whether Confucianism dictated oppression against women, what factors influenced the changes of status for women, how Western feminism is connected with Chinese women, what roles women played in transforming China, and how ordinary women lived and are still living in China.

HIST.2090 Colonial Latin America (Formerly 43.209) - Credits: 3

This class examines the history of Latin America from 1492 until the early nineteenth century. After considering the rise of the Aztec and Inca empires, we will consider how the Spanish and Portuguese were able to acquire and maintain control in the region. Topics include indigenous-European relations, slavery, economic developments, the challenges of maintaining a colonial government, and Latin American independence.

HIST.2110 Historical Dimensions of Globalization (Formerly 43.211) - Credits: 3

This course explores the impact of globalization on the development of world societies in the late 20th-early 21st century. Using historical analysis of contemporary realities, it develops an appropriate frame of reference to address questions about the nature and cause of globalization.

HIST.2120 Modern Latin America (Formerly 43.212) - Credits: 3

Modern Latin America, a 200-level course, surveys Latin America from independence in the early nineteenth century to the present using primary sources, a textbook, and scholarly works. It begins with an understanding of the political, social, and economic context from which ideas of independence emerged and considers the wars for independence. We will spend a significant part of the course studying nation-building: how did the leaders of new nations define their nations and the values that would guide them? Who was included and who was excluded in the process of nation-building? The next part of the course examines the demands of groups originally excluded: the indigenous population, women, and the poor. The portion of the course covering the twentieth century emphasizes Latin America’s international connections, focusing on influence from the United States and the effects of world wars on the region. Mass politics also emerge, and are expressed in the Mexican Revolution and in Peronism. We also will consider the Cuban Revolution and its wider effects in the region. We will conclude our survey of the region by considering how historical trends continue to affect politics today. For example, the Bolivian political scene continues to be affected by the events and outcome of the War of the Pacific (1879-1883) and by a strong indigenist movement.

HIST.2121 Afro-Latin America - Credits: 3

This class surveys the history of Africans and people of African descent in Latin America from the sixteenth century to the present. The vast majority of enslaved people from Africa who crossed the Atlantic arrived in Latin America, not in the US. In some areas, like the Caribbean and Brazil, the majority of the population for many years was (or is) of African descent. How has this affected social, cultural, and political life in the region? We will consider a range of topics, including how elements of African culture have been incorporated into broader Latin American traditions, slavery and abolition, the struggle for citizenship and inclusion, and the formation of a distinct Afro-Latin American identity.

HIST.2130 History of the Ancient Near East (Formerly 43.213) - Credits: 3

This broad survey investigates the development of the so-called "Cradles of civilization," Ancient Mesopotamia, Egypt, Anatolia, the Levant and Persia. At times the class will dip deeply into these cultures, using primary texts as well as archaeological and artistic evidence to better understand the political, religious, economic, military, social and artistic evolution of these closely associated cultures. We will focus on themes such as the development of kingship as a secular and sacred ruler, the ideology of Empire, the environment, and the fragility of the inter-connected network of resources that developed. The ultimate goal is to understand the inter-cultural
milieu of the Ancient Near East and demonstrate how much Western civilization owes to these historical developments.

HIST.2140 Early America Through Material Culture - Credits: 3
This class examines American history from the period before European contact to the early stages of the Industrial Revolution in the nineteenth century through the lens of material objects. Comparisons will be drawn between the objects and cultures used by European, Native American, and African American peoples, as well as over time.

HIST.2230 England to 1660 (Formerly 43.223) - Credits: 3
A survey of English History to 1660 with emphasis on the Institutional, Economic and cultural developments. In addition to providing general knowledge of the topic, the course is designed to enhance the learning experience of both History and English majors.

HIST.2240 Modern Britain (Formerly 43.224) - Credits: 3
A survey of the political, social and cultural history of modern Britain from the early 19th century to the present, focusing on the evolution of Britain from the period of Empire to its current membership of the European Union. Key themes include the transition from Empire to post-imperial Britain; economic development and distress; parliamentary and popular politics; social unrest and repression; nationalism, sub-nationalism and post-nationalism; and migration and citizenship.

HIST.2250 Ancient Greek History (Formerly 43.225) - Credits: 3
A study of Greek history, institutions and culture from Minoan times through the Hellenistic period.

HIST.2255 Hellenistic History - Credits: 3
This course investigates the Hellenistic Period, defined as the era from the death of Alexander the Great in 323 BCE to the death of Cleopatra and the conquest of Rome in 31 BCE. In these centuries, the Mediterranean world was exposed to brand new cultures and ideas, leading to an unmatched period of innovation and creativity, as well as to new conflicts and struggles. This course will emphasize themes of cultural, social, and religious hybridity, which were brought about through close contact with the Near East, North Africa, and Central Asia, and closely engaged with all the complexities of the three hundred years that passed between the height of the classical Greek world and the beginning of the Roman Empire.

HIST.2260 Roman History and Civilization (Formerly 43.226) - Credits: 3
This course examines one thousand years of Roman history (ca. 500 BC-500AD) with equal emphasis upon social, political, military, and cultural aspects of the Republic and Empire.

HIST.2270 Europe in the Middle Ages (Formerly 43.227) - Credits: 3
A survey of the Latin West during the formative period from the Roman Empire to the creation and development of the first European civilization.

HIST.2310 Renaissance and Reformation (Formerly 43.231) - Credits: 3
The history of Europe in the time of transition between the late Middle Ages and the Early Modern Period. Two principle topics are the intensification of cultural change which began in Italy around 1300 and spread slowly northward and the disruption of the unity of the Western Christian Church.

HIST.2350 Civil War and Reconstruction (Formerly 43.235) - Credits: 3
This course explores ways in which the U.S. changed in the years between 1848 and 1877. Topics covered may include the antislavery movement, black activism, secession, the war and reasons for U.S. victory, and the changes in American society and politics during Reconstruction.

HIST.2370 Europe in the Twentieth Century (Formerly 43.237) - Credits: 3
This course will survey the continent’s history over its "age of extremes" in the twentieth century, moving broadly from the apogee of European global power at the turn of the century to its decline in the trauma of two world wars and decolonization, through the Cold War and post-1945 recovery and the challenges and possibilities that have arisen for Europe in the aftermath of 1989 and the fall of the Berlin Wall.

HIST.2390 The Nonwestern World Since 1945 (Formerly 43.239) - Credits: 3
The recent history of Africa, the Middle East, Asia and Latin America and the comparative global processes and trends that have influenced the world since 1945.
The course will cover the wide range of causes of this major conflict, the difficulties and changing dynamics of waging this massive war and the effects of all this on both the internal political and social conditions and external consequences for the combatants with the peace settlement.

HIST.2410 Colonial Survival: Case Studies in Early American Legal and Political History (Formerly 43.241) - Credits: 3

This class contrasts the dominant monoculture colonies of Massachusetts Bay and Virginia with the lesser known multicultural colonies of Maine, Plymouth, New Amsterdam, Maryland and Rhode Island. While some of the multicultural colonies foundered, others flourished by utilizing a wide range of political and legal methods which allowed for their survival alongside much larger rival colonies. The class finishes by examining similar political and legal methods employed by Native American tribes for their own survival, in particular the Cherokee, whose carefully negotiated accommodations to Anglo-American culture allowed them to live side by side with the growing United States until the 1830’s. Close analysis of both primary and secondary source material will provide students with an intensive look at rarely examined issues in early American history.

HIST.2420 World War II (Formerly 43.242) - Credits: 3

The Second World War transformed states and people from East Asia to the United States to Europe. We examine diplomatic and military aspects of the war and how it affected the lives of people in the countries involved. Topics include the prelude to the war, military campaigns in Europe and the Pacific, collaboration and resistance, the home front, the Holocaust, science and the atom bomb, and the consequences of the war.

HIST.2485 United States Military History - Credits: 3

This course is a survey of military history and the interaction between society and military institutions, technology and techniques, from the pre-colonial era to the present. The causes and consequences of war, the role of technology in war, and strategies and tactics of war will be emphasized.

HIST.2490 The Vietnam War (Formerly 43.249) - Credits: 3

Covers the U.S. war in Vietnam from its origins in the French colonial era to its impact on contemporary culture and foreign policy.

HIST.2580 Russia to 1796 (Formerly 43.258) - Credits: 3

The growth of the Russian state: Varangian origins, the Kievan state, conversion to Christianity, Mongol domination, the rise of Muscovy, Europeanization and expansion under Peter the Great and Catherine the Great.

HIST.2700 Women in American History (Formerly 43.270) - Credits: 3

This course surveys the history of women in the British North American colonies and United States with a special focus on social and economic change. It examines women as a distinct group but also attends to divisions among them, particularly those based on class, ethnicity/race, and regional diversity. Course themes include concepts of womanhood, the development and transgression of gender roles, unpaid work and wage labor, social reform and women’s rights activism, as well as changing ideas and practices with respect to the female body.

HIST.2740 Native American History (Formerly 43.274) - Credits: 3

A comprehensive study of the Native Americans through historical and first-hand accounts of their lives. Designed to enlighten students and to represent fairly the Native Americans, dispelling some of the existing myths about them.

HIST.2745 History of the U.S. South - Credits: 3

The history of the southern United States from the colonial period to the present. Topics include the development of plantation slavery, the Civil War and Reconstruction, industrialization and the "New South," segregation and disenfranchisement, the Civil Rights Movement, and conservatism.

HIST.2750 African-American History (Formerly 43.275) - Credits: 3

This course surveys African American history in the United States from colonization to the present. It begins with a study of life in West Africa and traces the forced migration of Africans to the Americas. It explores West African transmissions, the freedom struggle, the great migrations from the South, the Harlem Renaissance, the modern Civil Rights movement, and the continuing impact of African Americans on life in the 21st century.

HIST.2790 History of Lowell (Formerly 43.279)
HIST.2810 Sub--Saharan Africa (Formerly 43.281) - Credits: 3
This course provides a basic introduction to the history of the African continent. It will expose students to the processes and patterns that have shaped modern African history. The course examines the historical roots of the many challenges that the continent faces today. But, at the same time, it will also provide students with the knowledge to shatter the myths and stereotypes about Africa.

HIST.2860 United States History Through Film (Formerly 43.286) - Credits: 3
This course explores selected moments in United States history - such as slavery, the Great Depression, World War II, the Vietnam War, and the feminist movement - through the lens of film. Using written historical sources as well as film, students will investigate how particular films have depicted the past and shaped the way that Americans remember their history.

HIST.2950 Japan Since 1600 (Formerly 43.295) - Credits: 3
A study of the traditional Japanese institutions and the transformation of Japan into a modern state after 1868: the Tokugawa Shogunate, Meiji Restoration, Russo-Japanese War, world power status, militarism, World War II, and present day Japan.

HIST.2960 United States Diplomatic History (Formerly 43.296) - Credits: 3
Although the course takes the entire United States diplomatic history as its field of historical study, its focus is on the American foreign policy in the twentieth century. The course first explores domestic and international factors that made the United States a world power by 1898. It will then consider the goals, the practices, and the results of the twentieth century American foreign policy. The course challenges students to view American diplomacy in a global context.

HIST.2980 Introduction to Historical Methods (Formerly 43.298) - Credits: 3
An introduction for the undergraduate student to the nature and principles of history. The course takes up methodology, historiography, research methods, electronic resources, bibliography, and the technical and stylistic problems involved in the presentation of research in scholarly form. Required of all history majors in the sophomore year. Meets Core Curriculum Essential Learning Outcome for Information Literacy (IL) and Social Responsibility & Ethics (SRE).

HIST.3010 The World of Things: Consumer Cultures in the Modern West (Formerly 43.301) - Credits: 3
This course will examine the emergence and historical impact of consumer cultures in the modern West, from the eighteenth century through the present. Topics to be covered will include the emergence of spaces of consumption (the home, the commercial/spectacular metropolis, the department store, the shopping mall, the tourist site), changing attitudes toward shopping and spending, the construction of modern social identities of class, gender, generation and race through consumption, and political struggles over consumption.

HIST.3020 The Byzantine Empire (Formerly 43.302) - Credits: 3
Through this course, students will examine the history of Byzantine culture, which grew from the Greek-speaking remains of the Roman Empire. Students will consider how leading men and women shaped Byzantine Civilization and the political and military institutions that preserved it through the fifteenth century. The course will also focus on the development and spread of Eastern Orthodox Christianity and significant aspects of Byzantine culture, such as cuisine, gender roles, cities, and art. We will explore in some detail Byzantium's complex and difficult dialog with its neighbors: the Islamic world, the Slavs, and the Latin West. This course especially emphasizes reading and discussion of primary source documents. Students will compose a research paper as their main work for this class.

HIST.3040 European Economic & Social History (Formerly 43.304) - Credits: 3
Europe has been transformed in the last 250 years from an agricultural society to a post-industrial one. We study the processes by which this happened, from the Industrial Revolution of the 18th and early 19th century to the wars and depressions of the early 20th century and the collapse of the communist system and European unification in the late 20th century. Students learn basic concepts and methods of history and economics.
HIST.3080 History of Crime and Social Control  
(Formerly 43.308) - Credits: 3  
Analyzes the causes and development of attempts to control crime, ethnic conflict, radical protest movements, urban disorders, and attitude and role conflicts.

HIST.3100 History of New England (Formerly 43.310)  
- Credits: 3  
Explores the evolution of New England society from pre-Columbian to the Post-Industrial, emphasizing the ways succeeding generations of New Englanders have confronted social and economic change. Topics include: white-Indian relations, ecological change, Puritanism, the New England town, the industrial revolution, the rise of cities, immigration, ethnic and class conflict, and the distinctiveness of the region.

HIST.3105 War and Native Americans in Colonial New England - Credits: 3  
War has played a significant role in the history of the indigenous peoples of New England and the Atlantic Northeast. From pre-colonial times through the American Revolution, conflict and warfare has had a dramatic impact on Native American societies in the region. In fact, as we examine in this course, war has been a defining feature in many indigenous communities. This course provides a cultural history of how the almost constant state of warfare shaped the lives of the Native Americans of the colonial Northeast.

HIST.3140 American Social History II (Formerly 43.314) - Credits: 3  
This course explores various aspects of common peoples' lives in the United States since 1880. Primary areas of investigation include work and leisure, family and community, as well as culture and values.

HIST.3151 Food in American History - Credits: 3  
This course examines change and continuity in American foodways from the pre-Revolutionary era to the present, focusing on the significance of class, race, gender, nationality, religion and region as well as transnational dimensions in that culinary history.

HIST.3160 American Environmental History  
(Formerly 43.316) - Credits: 3  
This course explores the environmental history of early America and the United States from the end of the last ice age (c. 12,500 years ago) to the present. It examines the role played by nature as an historical agent as well as the relationship between human communities and the physical and organic environment. Course themes include evolving land use, the environmental significance of industrial capitalism, urban public health, resource conservation and wilderness protection, the impact of ecology on public consciousness, as well as environmentalism.

HIST.3200 American East Asian Relations (Formerly 43.320) - Credits: 3  
The course examines relations between the United States on one hand and Japan, Korea, China, Vietnam, and the Philippines on the other in the 19th and 20th centuries. Besides political, trade, and cultural relations, there is also emphasis on American laws and practices regarding immigrants from these East Asian countries. The aim of the course is for students to gain a basic knowledge of American relations with East Asia and to develop analytical skills for sophisticated inter-national relations.

HIST.3210 The Holocaust (Formerly 43.321) - Credits: 3  
In a world in which genocide is real, the murder of six-to-eight million Jews between 1939 and 1945 remains a critical topic of inquiry. When were factories of death first conceived? What perverse rationale motivated the collaborators who built and operated the gas chambers and crematoria? This course will answer questions of this kind by examining the most respected scholars who have written on and primary sources that speak directly to the Holocaust.

HIST.3220 Chinese Foreign Policy (Formerly 43.322) - Credits: 3  
Chinese foreign policy since 1949 with a strong emphasis on tracing the links between historical, ideological, and cultural influences, on the one hand, and pragmatic and nationalistic considerations on the other. While tracing these links, the course explores the intricate process of policymaking in the People’s Republic of China.

HIST.3230 World of the Atlantic (Formerly 43.323) - Credits: 3  
The concept of the Atlantic world arose to describe the interactions of the peoples of the Americas, Europe, and Africa through trade, conquest, colonialism, independence and beyond. In this class, we will consider the cultural, economic, and political relationships that are formed and change over time between these groups. We will pay special attention to historical approaches to studying and writing about the Atlantic World.
HIST.3270 Medieval England (Formerly 43.327) - Credits: 3

From the first century Roman Conquest of the Britons to the 15th century Tudor victory at the Battle of Bosworth Field, this course aims to illuminate the social, political, religious, and cultural elements that made medieval England. This course will explore art, gender, class structures, and England's interactions with non-Christians, among many other topics. In addition to the extensive written sources available, special attention will be paid to archaeological discoveries that help us understand daily life in medieval England.

HIST.3290 Childhood in Premodern Europe (Formerly 43.329) - Credits: 3

This course examines the concept of childhood in medieval and Renaissance Europe (ca. 1100-1600), with particular attention to England and Italy. There are no specific prerequisites, although some knowledge of European history (i.e., Medieval Institutions, Western Civilization, Renaissance-Reformation) will be useful. Among the topics we will consider are the following: the different stages of childhood; children's education and apprenticeship; dress, diet, and demeanor of children; orphans; royal children; Protestant and Catholic views of children; adolescent sexuality; depiction of children in art; child labor; literature for children.

HIST.3300 Tudor and Stuart England, 1485-1714 (Formerly 43.330) - Credits: 3

Traces the transformation of England from a small island kingdom to the hub of an overseas empire. During this period the English people underwent religious upheaval and civil war, saw the rise and partial decline of the monarchy, built and rebuilt London, and enjoyed the plays of Shakespeare. Although England provides the focus for this course, the rest of the Tudor and Stuart world is included.

HIST.3320 Warfare in the Ancient World (Formerly 43.332) - Credits: 3

Warfare in the Ancient World is a practical introduction to the study of warfare in the ancient world and traces the advances made in empire building, ideology and military technology. The chronological structure of the class starts with the Egyptians and continues through the Dark Age, Classical and Hellenistic Greeks, to the rise and fall of Rome. This course will trace certain themes through the centuries: how different civilizations waged war; who served in various armies and why soldiers decided to fight. While major battles and important individuals are discussed, military tactics and strategies are only tools to help understand the underlying causes for armed conflict.

HIST.3333 American Women and Public Activism, 1800-1920 - Credits: 3

Over the course of the 1800’s, women developed numerous strategies for influencing American society and politics, even though they were unable to vote in most elections. This course will explore how diverse groups of American women formed organizations that acted decisively in the public arena. By analyzing women's social and political activism, we will see how vital civil society is for a functional democracy, and explore how change happens. Possible topics include women's activism in social reform, local and state governments, civil rights, labor organizations, charitable work, religion, and women's rights. Consideration will be paid to the differences among women in terms of race, class, and sexuality.

HIST.3340 The French Revolution and Napoleon (Formerly 43.334) - Credits: 3

This course will involve students directly in critical consideration of the central events and issues of the Revolutionary and Napoleonic periods, with an eye to their longer-term historical resonances in France, Europe and beyond. The core problems we will be discussing are ones which have remained vital in modern and even contemporary political history: the nature of liberty, the nation and national identity, equality and inequalities, violence and terror in politics, the cult of the leader, war and empire.

HIST.3360 Modern Ireland (Formerly 43.336) - Credits: 3

An upper-level course on the history Modern Ireland from the late 18th century to the present, covering the movements for independence in the 19th century, the cultural revival and revolutionary period from the 1890s, the social and economic history of the independent state, and the Celtic Tiger phenomenon of the late 20th century. Key themes include nationalism and identity, colonialism and post-colonialism, religion and repression, emigration and diaspora, culture and social life, and changing definitions of “Irishness” over time.

HIST.3370 Germany Since 1871 (Formerly 43.337) - Credits: 3

This course will survey major developments of Modern German History, from German Unification through European Union. Topics covered will include German social, political and military evolution under the Empire: the impact of modern, "total" war; the upheavals of the Weimar and Nazi periods; German recovery and division during the Cold War; German reunification and its contemporary aftermath.

HIST.3380 War and Memory in Twentieth Century
France (Formerly 43.338) - Credits: 3

This course will address the individual and collective trauma of modern warfare, as that was experienced in France both during and after the country’s three main wars in the twentieth century. It focuses on how the experience of modern war was negotiated in culture---in personal and official memory, in gender relations, and in a great variety of written and visual texts. Individual units will be dedicated to World War I, the Occupation and Vichy Regime during World War II, and the Algerian War, and to the long and conflicted afterlife of those conflicts.

HIST.3420 Inquisition: Myth and Reality (Formerly 43.342) - Credits: 3

Following a brief introduction and an overview of the medieval Inquisition, the first few weeks of the course will be devoted to a study of the Inquisition in Spain and Italy from 1450-1650. We will also discuss the way in which the history of the Inquisition has been analyzed during the past five hundred years (what historians call "historiography"). The second half of the course will focus on student research and selected topics in Inquisition studies.

HIST.3430 Fascism and the Radical Right in Twentieth Century Europe (Formerly 43.343) - Credits: 3

This course will offer a comparative exploration of the deep and enduring appeal of fascism and far rightist politics in twentieth century Europe. Beginning with the nationalist revival and cultural crisis of the late nineteenth century and the cataclysm of World War I, we will trace the rise of the radical right to political prominence in Europe in the 1920's and 1930's. While retaining a Europe-wide perspective throughout, we will analyze in particular detail the Fascist and National Socialist seizures of power in Italy and Germany, and examine their efforts of political, social, economic and cultural mobilization. Issues covered will include fascist political communication and governance, terror and "normality" in everyday life, labor and youth policy, racism and racial purification, and gender and reproductive politics, among others. In the final section of the course, we will contemplate the historical legacy of fascism after 1945, focusing on the politics of memory and representation in post-war Germany, Italy and Europe more generally, and assessing the recent resurgence of fascist and quasi-fascist political tendencies in the 1980's and 1990's.

HIST.3440 Revolutions in the Modern World (Formerly 43.334) - Credits: 3

In this comparative history course, we look at the theories of Marx, Barrington Moore, Crane Brinton, Theda Skocpol, William Sewell, and others on the causes, dynamics, and outcomes of revolutions in the modern world. We then consider the history of the French, Russian, Vietnamese, and Iranian Revolutions (list may vary each semester) to see how well the theories fit the events. The course ends with a discussion of whether the pattern and analyses discussed in the course are helpful in understanding a contemporary revolution, such as that in Egypt.

HIST.3449 American Slavery: History, Fiction, and Film - Credits: 3

This course examines the history of slavery in the United States. It explores topics such as the role of slavery in the economy, the culture of enslaved Americans, resistance to slavery, and the abolition of slavery, often making comparisons to slavery in other parts of the Western Hemisphere. The course also investigates how the institution of slavery has been represented by different generations of historians and in American popular culture from the 1830’s through the present.

HIST.3450 Slavery and Abolition (Formerly 43.345) - Credits: 3

This course takes a comparative approach to the study of plantation slavery in the Americas with special attention to developments in Virginia and Cuba. It surveys the structure of slavery in the nineteenth century United States South; slavery’s legacy in the United States; and its twenty-first century reincarnation in human trafficking and forced labor around the world.

HIST.3480 Making an Historical Documentary (Formerly 43.348) - Credits: 3

This course provides students with the basic conceptual and technical skills for developing and completing an historical documentary, including instruction about subject choice, narrative structure, camera work, and editing.

HIST.3489 Reform and Revolution in Latin America - Credits: 3

This course focuses on reform movements and revolutions in modern Latin America as a way of considering how individuals and groups articulate their needs and demand access to resources, representation, and political change. Calls for land reform, voting rights, environmental protection, indigenous representation, and anti-imperialism are common themes we will consider during the semester.

HIST.3490 The Cuban Revolution (Formerly 43.349) - Credits: 3
The Cuban Revolution has been surrounded by controversy since it took power in 1959. Through readings, films, and discussions, we will examine not only the events that have occurred in Cuba over the last four decades but also the ways that they have been presented to audiences in Cuba, the United States, and elsewhere. We will carefully consider the role of perspective in academic writing and the media and how it has shaped understandings of the Castro era.

HIST.3500 Colonial North America, 1550-1750
(Formerly 43.350) - Credits: 3
This class explores societal groups across the North American continent from 1550 to 1750 by comparing the approaches and responses to colonization taken by different European and Native American groups alongside the emergence of African slavery in North America. The semester concludes with the escalating colonial wars in the early eighteenth century, which would lead to both the French and Indian, and Revolutionary, Wars.

HIST.3510 Captivity Narratives and Colonial Societies
(Formerly 43.351) - Credits: 3
The long sequence of military conflicts in New England at the turn of the eighteenth century led to an equally long sequence of accounts describing the experiences of English colonists taken captive by Native American or French military forces. While these narratives remain the best known examples of this particular literary genre in the United States, this class will explore the multitude of ways in which the captivity narrative was used in colonial North America by people of different races and cultures.

HIST.3520 British Colonization in the Eighteenth Century (Formerly 43.352) - Credits: 3
This class provides a thematic examination of the British North American colonies. Topics include colonies founded in the long eighteenth century, material culture, the multi-racial British empire, the Enlightenment, and the rise of individualism’s impact on society and religion, and shifting political relationships between Britain and its colonies.

HIST.3530 The French and Indian and Revolutionary Wars (Formerly 43.353) - Credits: 3
The years between 1754 and 1784 saw drastic change on the North American continent and around the world for Britain and its colonies. Colonists in North America went from being devout British subjects during the French and Indian War to rebelling and founding their own new country during the American Revolution. In turn, the British Empire went from spending millions of pounds on North America in the 1750’s to barely committing the resources necessary for fighting the Revolution. This class examines these cultural and political transitions in context with discussions on the varied populations of North America who experienced them.

HIST.3540 Mapping Early America - Credits: 3
This class explores the diverse methods used by Native American, Spanish, French, British, and Dutch peoples to map, claim, and inhabit land and the built environment around them. Whether on paper, skins, or in the mind, this cartographic record documents developing technologies and shifting cultural and political identities alike. Weekly discussions provide students with both an introduction to the vast array of surviving maps from the early American world and the skills needed to analyze them.

HIST.3550 Jacksonian America (Formerly 43.355) - Credits: 3
An investigation of the social, political, and economic developments in the United States from 1815 to 1848. Special emphasis is placed on the spread of capitalism, the growth of reform movements, the development of cities, and the conflict over slavery.

HIST.3560 Civil War and Reconstruction (Formerly 43.356) - Credits: 3
This course surveys the increasing political, social, and economic tensions between the North and the South during the first half of the nineteenth century; the explosion of those tensions into secession and conflict; the four years of war; and the postwar struggle to reconstruct the South and forge a new union.

HIST.3570 American Civil War in Memory (Formerly 43.357) - Credits: 3
Students analyze how Americans have remembered the American Civil War in the years after the war ended in 1865. By looking at novels, memoir films, National Park Service Battlefields, and monuments, students discover how remembrances are influenced by views of race, gender, patriotism, regionalism, and economic forces.

HIST.3575 The Age of Jim Crow - Credits: 3
This course examines U.S. History—particularly the history of the South—during the era of Jim Crow, the period between the Civil War and the Civil Rights Movement when African Americans were systematically denied political and social rights. This course examines the visions white southerners held for what their region should be in this period, as well as the responses of African Americans.
HIST.3580 Amazing American Lives (Formerly 43.358) - Credits: 3
Biography often has been used by historians as source material for representing the nature of the American experience. An examination of outstanding biographies of the lives of various Americans can yield insights into all levels and ranks of American society from colonial days to the late twentieth century.

HIST.3585 American Women's Lives, 1600 - present - Credits: 3
Some of the very best and most readable examples of American Women's History come in the form of biographies. While historians may sometimes lack sources for writing women's history, we often know spectacular amounts about individual women. Scholars have used this wealth of information to produce rich, complex readings of women's lives. In the process of doing so, historians of American Women also write the history of all of American society, culture, politics, and economics. This course seeks to broaden our understandings of American History, the genre of biography, and most importantly, the history of American Women. The women chosen for the study will depend on the preferences of the professor, with attempts made to cover a variety of topics, time periods, and types of biographies.

HIST.3590 Democracy in the United States 1800-1860 (Formerly 43.359) - Credits: 3
The course examines what is often referred to as the Golden Age of American Democracy. How much power did ordinary Americans have in the political system? What motivated people to participate in politics? What roles did women and racial minorities play in American politics despite not being able to vote?

HIST.3620 The Twenties and the Thirties (Formerly 43.362) - Credits: 3
An examination of the emergence of the corporate and governmental institutions of modern America set in two turbulent decades of cultural and political ferment that involved both booming prosperity and the economic collapse of the Great Depression.

HIST.3650 United States History since 1960 (Formerly 43.365) - Credits: 3
Discusses Cold War politics and civil rights upheavals during the 1960's and 1970's, the decline of American economic and political power, and the resurgence of conservative politics in the 1980's.

HIST.3660 History of Race and Gender in Sports - Credits: 3
This course is an in-depth examination of the history of race, ethnicity and gender in the development of collegiate and professional sports in the United States. It will track the maturity over time of athletic activities, specific sports, their rules and the impact each particular sport has had on society, politics, legislation, economic stratification, educational opportunity, and the American cultural experience. Students in this course will explore issues such as racial and sexual stereotyping in sports and related advertising, college athletes and academics, Native American mascots, sports during periods of social unrest including the Civil Rights Movement, and the importance of the passage of Title IX (9).

HIST.3690 Russia 1796 to the Present (Formerly 43.369) - Credits: 3
This course covers the history of Russia in its various incarnations-Imperial Russia from the end of Catherine the Great’s reign the Soviet Union, and today’s Russian Federation. We use both historical works and literature to get a better understanding of the Imperial state, the nature and the social bases of autocracy, the ideologies and actions of the movements that supported the Empire and those that opposed it. We cover the cataclysms of World War I, the Revolutions, Civil War, and the Soviet period (preparing the student for the course on “Stalin’s Russia”, 43.374). We examine the causes and events involved int he decline and collapse of the Soviet Union, and the rise and emerging patterns of behavior of the Russian Federation.

HIST.3710 Medieval Institutions (Formerly 43.371) - Credits: 3
This is a reasonably intensive reading seminar focusing on a number of important medieval institutions that have helped to influence our modern world. You will read a number of works in order to discuss them in detail in class. In addition, you will be required to write a review of one of three required books.

HIST.3720 Women in the Middle Ages - Credits: 3
This course explores medieval Europe through the female lens. We will illuminate the influence of women on war, politics, business, religion and culture. We will study queens, writers, artists, nuns businesswomen, and peasants in order to understand how women shaped the medieval world, how they were shaped by it, and how they contributed to the brilliance of the Renaissance.

HIST.3730 Nazi Germany (Formerly 43.373) - Credits: 3
This course looks at the period 1933-1945 (the period of the "Third Reich") in Germany from the perspectives of economics, politics, society, and the arts. In the course, we will read preeminent historians who have written on each of these themes in order to gain a firm understanding of the historical debates that surround the period. Specific subjects include the Nazi consolidation of power, the increasingly brutal nature of anti-Semitic policies, the power struggles among chief Nazi officials, the ideologies and personae of figures like Hitler, Rosenberg, and Goebbels, the nature of "Nazi art" and cultural policies, and the path to war.

HIST.3740 Stalin's Russia (Formerly 43.374) - Credits: 3

Spanning the period from the "October Revolution" of 1917 to Stalin's death in 1953, this course considers "Stalinist Russia" from the perspectives of economics, society, the arts, politics and war. In the course, we will read the preeminent historians who have written on these topics.

HIST.3760 20th Century Irish History in Film (Formerly 43.376) - Credits: 3

This course is on the representation of Irish history in narrative feature and documentary films made in or about Ireland. Starting with the revolutionary era, it covers the key events, issues, and debates that defined Irish politics, culture and society in the last hundred years. The course is divided into five thematic sections and proceeds chronologically through the 20th century, starting with the War of Independence against the Britain and the Civil War that followed; the American romanticism of Ireland in film; social issues that plagued the Irish Free State and Republic; the period of violence in the North known as The Troubles; and the issued raised by multi-culturalism during the Celtic Tiger era.

HIST.3790 United States Industry Twentieth Century (Formerly 43.379) - Credits: 3

An exploration of the rapid growth of the American economy in the 20th century, including the evolution of the large corporation and the mass production assembly line. Particular attention is devoted to the ways in which immigrants, women, and the African Americans were affected by the rise of big business. The course also traces the decline of the traditional U.S. manufacturing base following the Second World War and the impact this had on the working class and their unions.

HIST.3800 Work and Society (Formerly 43.380) - Credits: 3

Provides a survey of labor history from the colonial period to the present focusing on the interrelationship between culture and work in American society and on the dynamics of technical and economic changes on the organization of work processes.

HIST.3810 United States in the 1960s - Credits: 3

This course examines the United States during the 1960s. General themes include the stifling and freeing of dissent, the "rights revolution", liberal social and economic policy, foreign policy in a bipolar world, redefinition of values and morals, changing relations between women and men, increasing concern with environmental pollution, the growing credibility gap between citizens and their government, and rise of the "New Right".

HIST.3840 Radicalism in American History (Formerly 43.384) - Credits: 3

A biographical approach to the influence of radicalism on American history with emphasis on significant and representative personalities and their contributions.

HIST.3845 Malcolm X - Credits: 3

This course investigates the personal transformation of Malcolm X during his lifetime as well as the impact he has had on both American and transnational culture and politics from the mid-twentieth century to the present.

HIST.3870 Pirates of the Mediterranean - Credits: 3

This course uses piracy, defined as armed robbery at sea, to highlight issues of violence, governmental intervention, and economic practices as they relate to marginalized people of the Greco-Roman world. Students will be introduced to the methods of underwater archeology while examining shipwreck evidence, and epigraphic conventions while reading primary source material relating to piratical events. The course follows the long history of the Mediterranean as a contested, yet central space, and tracks how the sea was used, not just as a resource, but as an opportunity for predation and personal advancement. The main questions will be: what is a pirate, and who has the power to apply that label to others.

HIST.3880 Ancient Mediterranean: Cultures in Contact (Formerly 43.388) - Credits: 3

The ancient Mediterranean was home to a diverse array of cultures in close contact with each other through trade, warfare, and colonization. This course will study a variety of Greco-Roman responses to other cultures through a series of case studies of contact between Greeks, Romans, and other cultures of the ancient world. In particular, we will examine questions of the applicability of modern concepts such as race and ethnicity, and explore the ways in which these shifting representations of other cultures are reflective of the ways in
which Greeks and Romans perceived themselves. We will also reflect on the ways in which these ancient Greco-Roman conceptions of culture relate to our own modern understandings of cultural difference.

HIST.3885 Law in the Ancient Greek World - Credits: 3

This course will examine the body of evidence for law in the ancient Greek world as a means of understanding the legal, political, and social history of the Greek poleis. In particular we will focus our attention on the large corpus of forensic speeches from Classical Athens with an eye to understanding the ways in which the Athenian city governed itself and resolved conflict within the poleis. Due to the nature of these speeches and the evidence for Greek legal practices, we will also be examining various aspects of Greek social and economic history within a legal context, including gender, slavery, property law, and citizenship.

HIST.3890 Ancient History in Film (Formerly 43.389) - Credits: 3

Ancient History in Film seeks understand the interconnection between ancient texts, social history and pop culture in American cinema. This course is more than an excuse to watch fun films and gain academic credit. It will engage the primary texts that are the foundation for these cinematic creations while investigating the social and cultural influences that shaped the making of these movies. Ultimately, this course will provide a clearer view of our own world through the lens of moviemakers mimicking the Greco-Roman world. We will read primary texts in translation, modern analyses of these movies and you are responsible to watch an entire film between class sessions. All films are on reserve in the Media Center of the O'Leary Library.

HIST.3900 Topics in History (Formerly 43.390) - Credits: 3

An advanced course of study and examination of a variety of issues and topics in history. Students without a sufficient background in history courses should not attempt this course. Subject matter to be announced in advance.

HIST.3901 Topics in History of the Portuguese World - Credits: 3

An advanced course that will cover various topics in the history of the Portuguese-speaking world, including medieval, early modern, and contemporary history in Portugal, Brazil, and other areas of the Lusophone world. The specific focus of each iteration will be announced in advance. Offered irregularly.

HIST.3910 America and the World (Formerly 43.391) - Credits: 3

In an age of increasing globalization, historians realize the need for putting the American national narrative in a wider historical context. This course will help students locate the study of the United States in a global, comparative and transnational perspective. This course will be used as one of the courses needed by History majors in the global, comparative and under-represented areas of the major.

HIST.3920 United States Immigration History (Formerly 43.392) - Credits: 3

The course focuses on the experiences of women, men, and children who came to the U.S. from the colonial era through the 21st century. Their emigrations will be examined in a global context. Irish migration, the mass European migrations during the mid and late 19th /early 20th centuries, and post-Second World War immigration particularly from Asian and African countries are discussed. The Lawrence, Lowell, and Boston immigration stories are also considered.

HIST.3930 History of the Middle East and Islamic World (Formerly 43.393) - Credits: 3

This course examines the history of the Middle East and the Islamic World from the time of Muhammad to the present. It provides an introduction to the history of this often turbulent region. It exposes students to the processes and patterns that have shaped the history of the Islamic World. The course examines the historical roots of the many challenges that the region faces today.

HIST.3931 Empire and Resistance in the Modern Middle East - Credits: 3

This course explores the role of empires in the Middle East from the 18th through the first half of the 20th century. During this period various forms of imperial rule defined the region's governance—from Ottoman rule to the British occupation of Egypt in the late 19th century to British and French mandate states in much of the region post World War I. The course will emphasize comparative approaches to understanding how these empires shaped the region. We will examine how these various forms of empire were engaged by local populations, from elites to peasants, and how their histories impacted the independent nation-states that succeeded them.

HIST.3932 Environmental History of Middle East & North Africa - Credits: 3

This course examines the history of the Middle East and North Africa from an environmental angle. We will think about how
a focus on environmental factors enables alternative perspectives on colonialism, nationalism, capitalism, gender and sexuality, empire, race, and class. What are some of the benefits of these interpretations? Are there also drawbacks? We will also consider what it means to talk about the impacts of climate change in the region when thinking historically.

HIST.3940 Immigration and Assimilation in Contemporary Europe - Credits: 3

This course examines contemporary European dilemmas of immigration, assimilation and multiculturalism, within the context of the larger history of European imperial decline after 1945. It will aim at providing fuller historical understanding of Europe’s ongoing crises of integration, while also exploring the textures of individual and community life among those of immigrant descent within contemporary Europe. For purposes of focus and continuity, greatest attention will be dedicated to South Asian, Turkish, and North African communities in Britain, Germany and France, respectively.

HIST.3960 Alcohol In American History (Formerly 43.396) - Credits: 3

This course uses the production, distribution, consumption, and prohibition of alcoholic drinks as a lens for studying cultural, political, and economic change in American life from the colonial era to the present.

HIST.4010 History Writing and Community (Formerly 43.401) - Credits: 3

Restricted to upper-level students and available only with permission of the instructor, this course offers a select number of students the opportunity to work for non-profit and governmental organizations within Lowell. Such organizations might include the National Park Service; Community Teamwork Inc.; Girls Club of Lowell; St. Athanasius Church; American Textile History Museum, and so forth. The course is primarily intended for History majors. Students will utilize their skills in research, writing, and analysis to assist an organization with its documented needs (e.g., conduct research on history of the organization; write a pamphlet or short article; organize oral history interviews; analyze the urban context in which the organization has developed). Students receive academic credit, along with invaluable work-related experience.

HIST.4100 Olympic Games and World’s Fairs (Formerly 43.410) - Credits: 3

The course studies Olympic Games and World’s Fairs from the mid-nineteenth century to the present. We examine how these international festivals participate in and contribute to six themes in the history of that period: nationalism and internationalism, mechanization of industry, modern architecture and urban planning, consumer culture, racial politics, and the Cold War. Students write brief papers connection these themes and one or more game or fair and a research paper on a relevant topic. Special attention is given to certain icons, like the Crystal Palace, the Eiffel Tower, the Nazi Olympics, and the Mexico City games.

HIST.4200 Research Seminar (Formerly 43.432) - Credits: 3

Systematic research in primary and secondary sources culminating in the writing of an original research paper using proper methodological and stylistic techniques. Weekly meetings and written and oral progress reports. Students must be acquainted with word-processing techniques. Required of all History majors. Meets Core Curriculum Essential Learning Outcome for Applied & Integrative Learning (AIL), Critical Thinking &Problem Solving (CTPS), and Written &Oral Communication (WOC).

HIST.4430 'Foreigners' of the Middle East (Formerly 43.443) - Credits: 3

This class focuses on how societies organize difference, looking at the relationships between national, ethnic, religious, racial, and/or socio-economic affiliations in creating and concretizing foreignness and minorities in the Arab Middle East and today’s Turkey and Iran during the late Ottoman and colonial eras. This class includes engagement with historical sources, movies, memoirs and more, and requires several short papers and one longer term paper and presentation.

HIST.4910 Directed Study (Formerly 43.491/591) - Credits: 1-4

Directed study offers the student the opportunity to engage in an independent study or research project under the supervision of a department member. Working closely with the instructor, students define and investigate a research topic in an area of special interest and present the results of their investigation in a significant paper. Juniors and seniors only.

HIST.4960 Practicum (Formerly 43.496) - Credits: 3

A program of on-campus and off-campus experiences for history majors only. Specific requirements vary depending upon the nature of the program undertaken by the student. The intent of the practicum experience is to provide an occasion for investigation of a community, social, cultural, or artistic area and for applying techniques of problem solving and/or skills that are appropriate to the student’s major discipline. May be repeated for a maximum of nine credits. Students are graded ‘satisfactory’ or ‘unsatisfactory.’ The practicum experience may
not be substituted for a required course in the major.

**HIST.4970 Tsongas Center Field Practice (Formerly 43.497) - Credits: 3**

This 3-credit hour course will be an addition to the History Department’s other 400-level courses. Currently, students enrolled in the "Research Seminar" conduct primary original research and present that research in one or another format. Those in the "Directed Study" work with assigned faculty on the historiographic breadth of a particular topic, reading selected books, writing response papers, and meeting for weekly discussions. Additionally, the existing "Practicum" allows students to earn course credit for hands-on classroom and history museum projects. The "Tsongas Center Practicum" will combine elements of all three, and make it possible to identify the specific Tsongas Center focus as such on student transcripts.
HONR.1100 First Year Seminar in Honors: Text in the City (Formerly HON 110) - Credits: 3

The First Year Seminar in Honors (FYSH) uses Lowell as its text. Rich in history and culture, and the students' home for the next four years, the City of Lowell offers a perfect topic to promote connections while learning how to view the city through the lens of the Humanities. Students will develop library research skills, including facility with primary and secondary sources, and an appreciation for the narratives that lie in buildings, objects, and what people leave behind. Activities include field trips, readings, writing, and an artistic interpretation. As important, students will have the opportunity to form strong connections to each other, to the faculty, and to the community. Note: New course, but combination of current 59.102 and 59.103 in one semester.

HONR.2001 Honors College: Student Fellowship - Credits: 0

Honors College Student Fellowship is a grant given to a Commonwealth Honors student for pre-approved scholarly engagement that is overseen and guided by a mentor. Fellowships are awarded for research, creativity, theme-based reading, author-based reading, community engagement, curating, or entrepreneurial projects. Each fellowship must have a reading component, a writing component and a speaking component.

HONR.2002 Honors College: Community Engage/Impactful Experience - Credits: 0

Honors College Community Engagement experience allows students to engage in structured community service. Students will collaborate with a community non-profit partner and work with them over the course of a year (two academic semesters) and is conducted under the mentorship of someone within the non-profit organization as well as a representative from the Honors College. Students will be required to read articles/texts appropriate to their Community Engagement experience and conduct a presentation at the completion. Each Community Engagement must have a reading, writing and speaking component.

HONR.2003 Honors College: Reading Symposium - Credits: 0

Honors College Reading Symposium consists of two one-semester sessions. Each session has three one-month long units of study, a written essay and a public presentation. A unit of study is defined by a faculty facilitator and consists of: reading, watching, and/or listening to books, articles, plays and/or films; completing pre-discussion assignments; submitting a unit reading notebook. Attending and participating in mandatory faculty-led discussion. Student must prepare and execute a 20-30 minute public presentation.

HONR.3100 Honors Thesis Project Workshop (Formerly 59.258 and HON 310) - Credits: 3

This course is designed to promote the application of interdisciplinary perspectives to problems, issues, concepts, and creations, as well as an appreciation of the research methods that characterize a broad range of disciplines. It is a writing intensive class with active participation requirements to enhance students' oral and written expository communication skills in preparation for the Honors Thesis/Project. Students complete the CITI module on research ethics and discuss the role of the University Office for Compliance/IRB.

HONR.3200 Seminar: Special Topics in Honors (Formerly HON 320) - Credits: 3

Seminar: Special Topics in Honors offers students the opportunity to engage in depth with a subject that is of special interest in an Honors-level seminar. The course will address an inquiry-based topic that spans or falls outside the boundaries of any individual major on campus, but integrates methodology, content, and/or approaches from two or more.

HONR.3300 Seminar: Special Topic in Honors (Arts & Humanities Perspective) - Credits: 3

Seminar: Special Topics in Honors offers students the opportunity to engage in depth with a subject that is of special interest in an Honors-level seminar. The course will address an inquiry-based topic that spans or falls outside the boundaries of any individual major on campus, but integrates methodology, content, and/or approaches from two or more.

HONR.3400 Seminar: Special Topic in Honors (Social Science Perspective) - Credits: 3

Seminar: Special Topics in Honors offers students the opportunity to engage in depth with a subject that is of special interest in an Honors-level seminar. The course will address an inquiry-based topic that spans or falls outside the boundaries of any individual major on campus, but integrates methodology, content, and/or approaches from two or more.

HONR.3500 Seminar: Special Topic in Honors (STEM Perspective) - Credits: 3

Seminar: Special Topics in Honors offers students the opportunity to engage in depth with a subject that is of special interest in an Honors-level seminar. The course will address an inquiry-based topic that spans or falls outside the boundaries of any individual major on campus, but integrates
methodology, content, and/or approaches from two or more.

HONR.4900 Honors Thesis Research (Formerly HON 490) - Credits: 0

This zero credit course is designed to facilitate tracking of Honors students' thesis progress. During the first semester of a two semester (6 credit) project, students will register for the appropriate 301 section in their department as well as HONR.4900, for which the Honors College components are required. These components include a timely and complete thesis proposal as well as an end-of-the-semester progress report, both of which are to be signed by the faculty advisor and committee member and submitted for approval to the Honors Director.

HONR.4910 Honors Thesis Project Research (Formerly HON 491) - Credits: 0

Honors students in their first semester of work towards the required Honors thesis or project enroll in this course to gain access to the Blackboard and Digication tools used to track their progress and archive their achievements. Requirements for Honors Projects and Theses include the on-time completion of a thesis/project proposal approved by the faculty mentor, committee member, and Honors Dean and development and maintenance of an ePortfolio in which the work is presented both in progress and as a finished, written product. Honors projects and theses conclude with the public presentation of the work and submission of an archivable document and completion paperwork. Honors students sign up for this course in addition to and simultaneously with the credit-bearing course used to satisfy their H7 requirement (or their H8 in the case of 3-credit Honors Projects).

HONR.4992 Honors College Directed Study - Credits: 0-3

Honor's College Directed Study. "Variable credit course, student chooses appropriate amount of credits when registering."
LGST.1030 Introduction to Paralegal Studies
(Formerly 41.103) - Credits: 3
This course familiarizes students with the role of paralegals in both the public and private sector. Other topics include principles of jurisprudence and basic legal concepts and terminology.

LGST.2100 Restorative Justice (Formerly PCS.205/41.210) - Credits: 3
This course will introduce students to the fundamental principles and practices of restorative justice as a method of building positive peace. Students develop a working knowledge of the general theories of restorative justice, as well as practical hands-on experience with peacemaking techniques. Traditional assumptions about justice and the adversarial legal process will be explored and challenged. The relationship between restorative justice, restorative practices, and other conflict resolution methods such as mediation will be discussed. Practical challenges in implementing restorative justice on the ground will also be examined.

LGST.2340 Criminal Law (Formerly 41.234) - Credits: 3
This course studies substantive criminal law, with emphasis on general principles of criminal culpability, such as the act requirement, the mens rea requirement, and causation. Topics include detailed coverage of the elements of personal and property crimes, such as homicide, rape, assault, battery, robbery, burglary, theft, arson, and fraud. The course will also cover the law of attempted crimes, accomplice liability, and defenses.

LGST.2500 Disability and the Law: Legal Rights of People with Disabilities (Formerly 41.250) - Credits: 3
This course examines the history and progress of the disability rights movement in America, the current state of the law, trends, and prospects for the future, with particular focus on those laws designed specifically to address the needs of people with disabilities.

LGST.2610 Introduction to Legal Concepts (Formerly 41.261) - Credits: 3
This course serves as an introductory legal course. It is a survey of many specific topics, such as constitutional law, contracts, intellectual property law, and current legal topics of interest. More importantly, the course emphasizes critical legal thinking, legal ethics, and human values.

LGST.2620 Introduction to Business Law (Formerly 41.262) - Credits: 3
This course introduces students to the fundamentals of business law. The main emphasis is on key aspects of contract law, including the agreement, consideration, writings, third-party rights, illegality, performance, breach, defenses, and remedies. The course also covers agency law, employment law, sections of the Uniform Commercial Code, and a variety of other legal issues and topics that influence and intersect with modern business practices. This course is highly recommended for pre-law students, CPA students, and paralegal students.

LGST.2870 Legal Writing (Formerly 41.287) - Credits: 3
This course trains students to produce effective legal work product as drafters of client letters, memoranda of law, pleadings, briefs, and other legal documents.

LGST.3600 Legal Issues in Racism (Formerly 41.360) - Credits: 3
This course presents a study of racial discrimination in the United States. Emphasis is placed on relevant constitutional provisions, statutory provisions, and on United States Supreme Court cases.

LGST.3630 Corporate and Property Law (Formerly 41.363) - Credits: 3
This course studies the law pertaining to business entities and structures. Partnerships, limited partnerships, and joint ventures are studied at the outset of the course. The main emphasis is on elements of the corporate structure. The last part of the course deals with personal and real property with coverage of wills and trusts. This course is highly recommended for pre-law students, CPA students, and paralegal students.

LGST.3650 The Legal Environment of Business (Formerly 41.365) - Credits: 3
This class explores the intersection of business and the law in modern American society. This class builds on the concepts covered in Business Law and explores current legal topics that affect doing business in the United States and abroad. Topics covered may include the U.S. Constitution and the courts system, white collar crime, cyber law, the laws of intellectual property, international trade, consumer protection, bankruptcy, product liability, administrative law, and labor and employment law, amongst others.
LGST.3660 International Law (Formerly 41.366) - Credits: 3

This course provides a broad introduction to international law with emphasis on current issues. Within public international law, topics covered will include the recognition of new states, organizations such as the United Nations and the European Union, the use of force, human rights, international crimes, the global environment, and international courts and tribunals. Within private international law, topics surveyed will include legal aspects of international trade and foreign investment, labor, intellectual property, cyber theft, and taxation. Current issues discussed will include global warming, recent corruption scandals, the Eurozone crisis, and legal issues facing global technology companies.

LGST.3670 Environmental Law (Formerly 41.367) - Credits: 3

This course examines the legal and administrative problems of protecting the quality of the human environment. Federal and state legislation on environmental policy is studied. Public interest litigation as a supplement to the enforcement of environmental law is discussed. The course also focuses on the practical problems of balancing the needs of business, the global competitiveness of the United States, the increasing demand for natural resources, and the need to protect, preserve, and restore the environment. The importance of sustainable development and environmental ethics are discussed.

LGST.3700 Real Estate Law (Formerly 41.370) - Credits: 3

This course examines contracts for the sale of real estate, deeds, title examinations, security for real estate transactions, methods and problems of co-ownership, zoning ordinances, brokerage contracts, leases and landlord, and tenant rights and liabilities.

LGST.3720 Sports, Entertainment and Art Law (Formerly 41.372) - Credits: 3

This course challenges students to engage in analytic reading, critical thinking and problem solving related to the legal issues facing the sports, entertainment and art worlds. Topics may include contracts, intellectual property rights, employment law, labor law, and other areas of interest.

LGST.3760 Family Law (Formerly 41.376) - Credits: 3

This course studies the critical family law issues facing society today. Subject matter examined may include the law of marriage, custody, adoption, divorce, child support, juveniles, right to die, fetal tissue transfer to prolong the life of another, reproduction control, and surrogate parenting. This course is taught from a legal and human values perspective.

LGST.3770 Elder Law (Formerly 41.377) - Credits: 3

This course introduces students to the major architectural components of the legal environment of the elderly, including Medicare, Medicaid, SSI, pensions, nursing homes, assisted living, estate management, and related issues.

LGST.3780 Comparative European Community Law (Formerly 41.378) - Credits: 3

This course deals with the relationship between European Community law and the law of the United States; the operation and impact of community law in the United States; and the role of the European courts in interpreting community law. International treaties, laws, and regulations affecting the free movement of people, goods and services are traced.

LGST.3790 The Relationship of Law, Logic, and Ethics (Formerly 41.379) - Credits: 3

This course examines the impact of ethical viewpoints on the structure of legal doctrines. It stresses the fact that the study of law is a study of ethics as well as logic.

LGST.3810 Women and the Law (Formerly 41.381) - Credits: 3

This course presents legal issues that often or particularly affect women. Topics may include sex discrimination, sexual harassment, rape, marriage, divorce, reproductive control, surrogate motherhood, and custody.

LGST.3850 Immigration Law (Formerly 41.385) - Credits: 3

Studies the immigration, nationality, and naturalization laws of the United States. The topics discussed are: the immigrant selection system, the issuance of immigrant and nonimmigrant visas; grounds of excludability of aliens and waiver of excludability; grounds for deportation of aliens and relief from deportation; and change of status within the United States including legalization, refugee, and asylum status.

LGST.3860 Intellectual Property (Formerly 41.386) - Credits: 3

This course surveys the law of the protection of ideas, trade secrets, inventions, artistic creations, and reputation. The course will briefly review the law of patent, trademark, copyright, trade secret, and geographical indication. The course
will cover the distinction between the various forms of intellectual property, and the statutory and common law methods of enforcing rights.

LGST.3870 Legal Research Methods (Formerly 41.387) - Credits: 3
This course introduces students to the fundamentals of legal research and writing. Students will gain hands-on experience in legal research and in the reporting of such research in written assignments, case briefs, and memoranda.

LGST.3880 Directed Study: Law (Formerly 41.388) - Credits: 3
This course permits students to engage in specialized study under the supervision of faculty.

LGST.3900 Litigation (Formerly 41.390) - Credits: 3
This course examines the practices and procedures involved in the litigation process. Topics may include: legal research, courts and jurisdictions, evidence and discovery, pleadings, motions, depositions, trials and appeals, and federal rules of procedure.

LGST.3920 Wills, Trusts and Estates (Formerly 41.392) - Credits: 3
This course provides an introduction to the law of wills, trusts, and estates. This course covers the fundamental legal concepts and vocabulary necessary to understand, draft, and work with the core estate planning tools. Practical examples and sample legal cases and materials will be provided and discussed. No prior legal knowledge is required, though some familiarity with the United States legal system or case law will be helpful.

LGST.4800 Bankruptcy, Debtor & Creditor Law - Credits: 3
The purpose of this course is to introduce the student to U.S. Bankruptcy laws and their place in providing a safety net for both individuals and business as well as an orderly, consistent and predictable method for dealing with income, debts and assets for insolvents, such system being necessary for the proper functioning of an economy. The topics include the evolution of the laws, provisions common to all Bankruptcy petitions, and proceedings under the most common chapters. Students will study and apply the most commonly used consumer chapters of the United States Bankruptcy Code (7 &13).

LGST.4880 Directed Study in Law (Formerly 41.488)
- Credits: 1-6
This course permits students to engage in specialized study under the supervision of faculty.

LGST.4890 Seminar in Law (Formerly 41.489) - Credits: 3
The course provides opportunity for small groups of advanced students to study selected legal topics.

LGST.4900 Legal Aspects of Cyberspace (Formerly 41.490) - Credits: 3
This course introduces students to the law of the Internet and regulation of lawful and unlawful computer activities. Traditional notions about privacy, defamation, contracts, freedom of expression, pornography, stalking, jurisdiction and intellectual property are challenged by the latest cyberspace technology. Much of the debate about control, which leads to questions about rights and responsibilities, centers around who, if anyone, should design the legal architecture of cyberspace. These and other topical subjects serve as the focus on the study of legal issues in cyberspace.

LGST.4970 Legal Studies Practicum (Formerly 41.497) - Credits: 3
This course consists of assigned fieldwork under the supervision and with the permission of the coordinator. The course is designed to broaden the educational experience of legal studies students by providing exposure to selected legal environments such as corporate legal departments, financial institutions, law firms, real estate departments, banks and government offices and agencies. This provides a correlation of theoretical knowledge with practical experience in an area of interest to students.

LGST.4910 Legal Studies Seminar (Formerly 41.491) - Credits: 3
This course provides an opportunity for small groups of advanced students to study selected legal topics.
College of Fine Arts, Humanities & Social Sciences

Degree Pathways are a sample semester-by-semester sequence of courses which might be followed for successful completion of a degree, diploma, credential or certificate from the university. Students should follow the degree pathway appropriate to their catalog year. A student's catalog year is typically defined by the date of their entry into the University of Massachusetts Lowell.

Total Minimum Credits = 120

Minimum Digital Media Credits: 36

Maximum Digital Media Credits That Can Be Counted Toward Graduation: 54

1Required for entering Freshmen.

2World Read Language Track (WR track) requires successful completion of a two course sequence in a World Language (depending on placement) and three approved courses on the culture/history/literature/film related to that language, but taught in English. (Total of 15 credits.) For detailed information refer to Policies - Language Requirements in the undergraduate catalog.

Additional Requirements

- Students must take 36 credits within the Digital Media major with at least 15 credits at the 3000 or 4000 level. Students may take all courses within the designation DGMD if they choose.
- Students may not take more than two (2) courses from a single department outside of Digital Media to fulfill the major credit hours requirements.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum policy for further details. You should meet with your faculty advisor to determine how you will meet the Core Curriculum requirements.

Current UMass Lowell students should use their Advisement Report in SiS. If you need assistance, please contact your advisor.

Restriction on off-campus study:

Be advised that any course taken at another institution must be formally approved prior to enrollment. See the catalog policy for details.

Last updated: 11/04/2021
College Exploration Seminar is designed to: Guide rising high school Seniors through the process of exploring and researching academic majors and/or future careers that match their strengths, interests, personality, skills, and values; Introduce students to various research tools for exploring and comparing colleges; Provide an overview of the college application process (with guest speakers from both Admissions and Financial Aid) with an emphasis on best practices; Orient students to the concept of college (with an emphasis on the terminology used in higher education, the differences between high school and college, study skills & time management strategies for a successful first year, and available college resources); Provide an overview of available majors within specific categories (Arts & Humanities, Business, Education, Health, Social Sciences, STEM); Teach students to utilize different decision-making strategies regarding career choice, and to set realistic goals.

FAHS.1500 Major Exploration Seminar - Credits: 1

Major Exploration Seminar is designed to guide First and Second Year students through the process of exploring and researching college majors and careers that match their strengths, interests, personality, skills, and values. Each week we learn about a specific major, and faculty guest speakers representing that major often join us to provide insight into possible career paths. We also utilize a variety of approaches including self-assessment, online research, interest inventories, and informational interviews, so that each student begins to develop a clear picture of majors and careers that are potentially realistic and rewarding to them.

FAHS.1600 Career Exploration Seminar - Credits: 1

Career Exploration Seminar II allows students to further explore their fields of interest in a hands-on experiential way through required externship experience. With coaching from the course instructor, each student will: 1) identify two people (working in a field of interest to them) that the would like to job-shadow. 2) request, schedule, and attend the shadowing experiences. 3) provide an extensive overview of the fields and/or occupations they explored to the class. Each student will spend a total of 14 hours throughout the semester shadowing two different people who work in a role or setting that they are potentially interested in. It is suggested that students complete these hours in two 7-hour increments (a 7-hour day with one employer, and a 7-hour day with the other).

FAHS.2000 Job Search Seminar - Credits: 1

The Job Search Seminar is designed to provide students with the necessary structure, resources, and support to facilitate their career development and the pursuit of career goals. Through a variety of interactive teaching methodologies and assignments, students will participate in a sequence of learning activities including self-assessment, career exploration, and the job search process. The latter will include resume and cover
letter writing, the online search, professional networking, and strategic interviewing. The goal of the course is to assist each student in developing a sound plan of action in pursuing their career objectives.

FAHS.2010 Innovation Project - Credits: 1

This one credit course is designed to award academic credit for students who are engaged in a project associated with any of the Difference Maker competitions. In the College of Fine Arts, Humanities and Social Sciences, the annual Creative Venture Competition engages students in a project that creates a new product, program or service that addresses a societal need. Credit is awarded upon completion of all requirements of the competition. Since there is no in class requirement, and each project is different, a Project Description, rather than a syllabus is submitted.

FAHS.2130 Foundations in Liberal Studies (Formerly 59.213) - Credits: 3

Foundations of Liberal Studies is a required course for all BLA majors. This course examines the value and importance of drawing on several academic disciplines to understand issues that are too complex to be addressed effectively using any single discipline. Using a case study approach, we will examine how the elements of various disciplines can be integrated and synthesized to understand and give voice to complex issues dealing with health, environment, governance, peace and conflict, etc. Upon completing the course, students will be able to view the courses in their two BLA concentrations from an interdisciplinary perspective by observing how elements of each discipline can contribute to the understanding of global problems. These skills will be applied in the BLA Capstone Course.

FAHS.2200 Designing the Future World (Formerly 57.220) - Credits: 3

All purposeful human activity involves design. Every day we are surrounded by the products of design processes—buildings, cars, entertainment, corporations, schools, even laws and regulations. They make our lives easier in many ways, but they may also create significant social and environmental problems. In the past, designers often did not consider the impact of their designs on society, or ignored the negative consequences. Our culture and legal system usually permitted, or even encouraged, this irresponsibility. Today, a small group of scholars, businessmen and women, and activists are rethinking how we design the things around us, with the goal of addressing the most pressing social and environmental issues. This class will introduce students to some of these issues, the people who are confronting them, and the ways in which all of us can contribute to designing a better Future World. With a series of hands on projects, coupled with readings and other resources, students will work to design aspects of the future. In the process you will learn about possible solutions to complex, important problems, but also learn valuable life skills such as problem framing, problem solving, critical thinking, active learning, communication, and simple construction methods. No previous experience is required—only curiosity and eagerness to learn.

FAHS.3700 Washington Center Term (Formerly 59.370) - Credits: 1-12

FAHS.3960 Environmental Studies Practicum (Formerly 59.396) - Credits: 1-6

This course is the service learning capstone for the Environmental Studies Minor (soon to be created, after approval of this course). It emphasizes the cross-disciplinary examination of contemporary environmental issues, starting from the premise that they are multi-dimensional - biophysical, cultural, economic, ethical, historical, technical, etc. It requires only a few class meetings and otherwise involves students in work with local and regional environmental agencies and organizations. This service work is meant to encourage students to make connections between theory and practice, as well as to expand the conceptual and practical tool kit they need to understand environmental controversies and work toward sustainability.

FAHS.4130 BLA Capstone (Formerly 59.413) - Credits: 3

Student enrolled in the BLA program complete the BLA Capstone course during their senior year. This course features a semester-long interdisciplinary project, using knowledge gained from the students' two BLA concentrations, as well as any minors, as applicable. Students enrolled on-campus may choose to complete an original research study, creative art project (i.e., writing, film, music, drawing, etc.), or a problem-focused community action project. Online students choose to do either an original research project or a creative art project. Projects are completed in consultation with the instructor of the BLA Capstone course.

FAHS.4910 Directed Studies - Intercollegiate FAHSS (Formerly 59.491) - Credits: 0-3

Directed Studies - Intercollegiate FAHSS. "Variable credit course, student chooses appropriate amount of credits when registering."

FAHS.4960 Directed Study in Peer Tutoring (Formerly 59.496) - Credits: 1-9

FAHS.4970 Directed Studies: Environment and Society - Credits: 3
An individual supervised research project relative to issues of the environment and society. Thematic or methodological issues must result in a significant research paper.
College of Fine Arts, Humanities & Social Sciences

Degree Pathways are a sample semester-by-semester sequence of courses which might be followed for successful completion of a degree, diploma, credential or certificate from the university. Students should follow the degree pathway appropriate to their catalog year. A student's catalog year is typically defined by the date of their entry into the University of Massachusetts Lowell.

WLAN.4000 Senior Capstone in World Languages and Cultures - Credits: 1
The purpose of this course is to help students document and critically analyze their experience abroad, in an internship or in a community project. Through the creation of a digital portfolio, this course validates our major students' linguistic hands-on experience through study abroad or community-based practicum experience and it establishes consistency in our major curriculum by ensuring that all our majors are getting a high-quality linguistic experience abroad or at home. This course is conducted in the target language in which the student majors. For those students majoring in French/Spanish and Italian/Spanish options, the student chooses the target language in which the coursework is completed.

WLAR.1150 Arabic 1 and Culture (Formerly 53.115) - Credits: 3
Development of fundamental skills in oral expression, aural comprehension, reading and writing is required in language courses. Beginning and intermediate language courses at the 115, 116 and 215, 216 levels must be elected in the prescribed sequence.

WLAR.2150 Arabic 3 and Culture (Formerly 53.215) - Credits: 3
Development of fundamental skills in oral expression, aural comprehension, reading and writing is required in language courses. Beginning and intermediate language courses at the 117, 118 and 215, 217 levels must be elected in the prescribed sequence.

WLAR.2160 Arabic 4 and Culture (Formerly 53.216) - Credits: 3
Development of fundamental skills in oral expression, aural comprehension, reading and writing is required in language courses. Beginning and intermediate language courses at the 115, 116 and 215, 216 levels must be elected in the prescribed sequence.

WLAR.4940 Directed Study in Arabic (Formerly 53.494) - Credits: 3
Individual research projects on Arabic or Islamic culture. Students, through regular and frequent consultation with instructor, pursue a special topic of research.

WLCH.1050 Chinese 1 and Culture (Formerly 53.105) - Credits: 3
Development of fundamental skills in oral expression, aural comprehension, reading and writing is required in language courses. Beginning and intermediate language courses at the 105, 106 and 205, 206 levels must be elected in the prescribed sequence.

WLCH.1060 Chinese 2 and Culture (Formerly 53.106) - Credits: 3
Continuation of 53.105 Chinese 1 and Culture. Development of fundamental skills in oral expression, aural comprehension, reading and writing is required in language courses. Beginning and intermediate language courses at the 103, 104 and 205, 206 levels must be elected in the prescribed sequence.

WLCH.1080 Business Chinese I and Culture - Credits: 3
This introductory language and culture course prepares non-
Chinese speakers for potential future business engagements either in China or with Chinese speakers in the United States. Effective communication and cultural competency in standard/Mandarin Chinese are emphasized. Students will be exposed to various aspects of Chinese culture appropriate for informal as well as business social settings. Topics include, but are not limited to, self-introduction, traveling, lodging, dining, shopping, banking, seeing a doctor, making friends, and doing business. Authentic language materials (vocabulary, Pinyin, sentence structures, conversations) are presented and taught in a second language acquisition environment with interactive activities that are relevant to proper social etiquette.

**WLCH.1090 Business Chinese II - Credits: 3**

This language and culture course is a continuation of Business Chinese I. The course prepares non-Chinese speakers for potential future business engagements either in China or with Chinese speakers in the United States. Effective communication and cultural competency in standard/Mandarin Chinese are emphasized. Students will be exposed to various aspects of Chinese culture appropriate for informal as well as business social settings. Topics include, but are not limited to, self-introduction, traveling, lodging, dining, shopping, banking, seeing a doctor, making friends, and doing business. Authentic language materials (vocabulary, Pinyin, sentence structures, conversations) are presented and taught in a second language acquisition environment with interactive activities that are relevant to proper social etiquette.

**WLCH.2050 Chinese 3 and Culture (Formerly 53.205) - Credits: 3**

Development of fundamental skills in oral expression, aural comprehension, reading and writing is required in language courses. Beginning and intermediate language courses at the 105, 106 and 205, 206 levels must be elected in the prescribed sequence.

**WLCH.2060 Chinese 4 and Culture (Formerly 53.206) - Credits: 3**

This course is a continuation of 53.205 Chinese 3 and Culture, which is a pre-requisite. Development of fundamental skills in oral expression, aural comprehension, reading and writing is required in language courses. Beginning and intermediate language courses at the 105, 106 and 205, 206 levels must be elected in the prescribed sequence.

**WLCH.3000 Modern Chinese Literature and Culture (Formerly 53.300) - Credits: 3**

This course offers an insight into Chinese culture and society by examining different genres of modern and contemporary Chinese Literature -- the novel, poetry, essay, and drama -- since the early Twentieth Century. Readings in English translations of representative works by major writers/essayists/poets/playwrights will be complemented by selected feature films and documentaries. The survey of Chinese literature will be put in the context of a series of sociopolitical changes in China that informed the production of these works.

**WLCH.3100 Special Topic in Chinese Studies - Credits: 3**

An in-depth study of the culture, civilization, or literature from the Chinese-speaking world. Class discussions, readings, oral and written work all in English. Other materials could be in target language with translations or subtitles. May be repeated once for credit, if content changes, and with written consent of the instructor.

**WLCH.3150 Chinese Culture and Civilization (Formerly 53.215) - Credits: 3**

An in-depth study of culture, civilization, and literature from the Chinese-speaking world. The emphasis of the course is not only on understanding China's history in general chronological terms, but also on understanding the cultural qualities that have made China a great yet distinctive country. Course taught in English.

**WLCH.3200 Chinese Cinema and Culture - Credits: 3**

This course offers an insight into the social, economic, and political transformation of China, particularly in the past century, through a cinematic lens. Selected films of different genres from Mainland China, Hong Kong as well as Taiwan, and even the U.S., including Hollywood films portraying China and films made by Chinese Americans, will be examined to decipher its regional differences, the urban-rural gap, daily lives, gendered identities, and the belief system as well as the cultural landscape of contemporary and modern China. Taught in English.

**WLCH.4900 Directed Study in Chinese Culture (Formerly 53.490) - Credits: 3**

Students through regular consultation with the Instructor develop a course of directed study or independent study in Chinese Culture. Students findings are presented in a paper of significant proportion.

**WLCH.4950 Advanced Tutorial in Chinese Culture (Formerly 53.495) - Credits: 3**

A program of directed study to give an opportunity to a student to explore problems in Chinese Culture in greater dept
This course explores the culture and literature of French-speaking Quebec. Through essays, literary readings, songs, works of art, and film, students will follow the development of this province of Canada from its origins as a French colony through the exodus of French-Canadians in the early twentieth century and the Revolution Tranquille of the 1960’s, up to the present day. Conducted entirely in French.

WLFR.3010 Survey of French Literature (Formerly 50.301) - Credits: 3
A panoramic survey of French Literature based on the history and civilization of France from the Middle Ages to the XXth (20th) Century, through readings in the original French language of excerpts from milestone novels, theater and poetry. Class conducted in French.

WLFR.3015 Inventing Paris - Credits: 3
The “Haussmanization” of Paris coincides with the emergence of the capital city of France as both a setting for contemporary literature, and as a literary character in its own right, holding different meanings for its many poets, writers, and painters. This course explores how Paris changed over the course of the nineteenth century by examining poetic and fictional responses to the Parisian landscape, and through their explorations of what it meant to live in the capital. Readings will include works by main French writers such as Balzac, Baudelaire, Hugo, Zola, and Maupassant, and feature cinematic works by Godard and Varda, in additional to examples of Paris as represented in new media. Taught in French.

WLFR.3020 Survey of Francophone Literature (Formerly 50.302) - Credits: 3
A survey of contemporary Francophone Literature of African, European, and North American French speaking countries since 1960 until today.

WLFR.3025 The Short Story in Francophone Literature - Credits: 3
A panoramic survey of the short story in Francophone literature, based on the history and civilization of France from the Early Modern period, through the beginning of the 21st Century, and including readings in the original French language of important works I short prose by Marguerite de Navarre, Jean de la Fontaine, Madame de Sevign, Jean de La Bruyre, Montesquieu, Francoise de Graffigny, Honor de Balzac, Gustave Flaubert, Guy de Maupassant, Rachilde, Madeleine Bourdouxhe, Fatou Diome, and Scholastique Mukasonga. Class conducted in French.

WLFR.3030 Special Topics: in Francophone Studies

or to initiate additional problems in Chinese Culture.
(Formerly 50.303) - Credits: 3
An in-depth study of a specific topic in literature, culture, civilization or cinema from the French-speaking world. Class discussions, readings, oral and written work all in French. May be repeated once for credit, if content changes, and with written consent of the Instructor.

WLFR.3050 World Ready Topic for French Track - Credits: 3
This course, taught in English, is for non French majors and minors. It is offered for students who are completing their language requirement through the World Ready option, and have chosen the French track. The course covers a topic of the French-speaking world's culture, civilization, cinema or literature. Class discussions, readings, oral and written work all in English. Other materials could be in target language with translations or subtitles. May be repeated once for credit, if content changes, and with written consent of the instructor.

WLFR.3100 French Speaking World (Formerly 50.310) - Credits: 3
Designed for prospective majors and minors in French as well as for those who have completed four years of high school or two years of college French. The course examines similarities and differences in the ethos of nations of the French-speaking world and in the life-styles of the individuals and groups that make them up. Conducted in French.

WLFR.3150 Francophone Communities in North America (Formerly 50.315) - Credits: 3
This course introduces the concept of "Francophonie" and describes the origins of the main francophone communities left in North America: Quebec, Acadia and New-Foundland in Canada, and Louisianna and New England (including Lowell) in the U.S. The primary focus of this class is Culture, history and language (different varieties of French spoken by those communities). Class conducted in French.

WLFR.3200 Contemporary French Civilization and Culture (Formerly 50.320) - Credits: 3
In this course we look closely at some fundamental issues reflecting the rapidly changing paramters of French culture and society today; the question of national identity and cultural hybridite, the relationship between the evolving types of family relations and new forms of social and political contracts; the crucial personal problems faced by the young, the poor, the immigrant and the elderly in an increasingly multicultural Hexagone attempting to define its place, role and function within the recently defined Europe unit and the new global world order; the current status of women; the relashionship between cities and ghettos, violence and crime; the nature of emerging forms of cultural production within new trends and styles of modernite.

WLFR.3400 Contemporary French Cinema (Formerly 50.340) - Credits: 3
Provides a critical appreciation of contemporary French cinema (1985-today) aiming at sorting out its eclecticism and focusing on the following aspects: 1) French cultural exception in the European Union: cultural integration and national identity; 2) Representation of the ongoing social and moral changes in contemporary France; 3) The new generation of French filmmakers. Class taught in French.

WLFR.3460 Advanced French Conversation (Formerly 50.346) - Credits: 3
Advanced oral practice in rapid and idiomatic speech. Topics of contemporary significance are selected from contemporary prose.

WLFR.3480 Advanced French Conversation and Composition (Formerly 50.348) - Credits: 3
Designed to improve and reinforce proficiency in spoken and written French through regular exercises of oral communication and free composition, through the analysis of literary texts and authentic written and oral materials. Taught in French.

WLFR.3760 French Cinema & Society (Formerly 50.376) - Credits: 3
Covers the dramatic presentation French society gives of itself during the period of profound social and economic change, from the New Wave and the May 68 events to today's younger generation facing an uncertain tomorrow. Each screening (in French with subtitles) is preceded by an introduction placing the film in its historical context. In English.

WLFR.3800 Francophone Identity through Cinema (Formerly 50.380) - Credits: 3
Provides a critical appreciation of the notion of Francophone identity through modern and contemporary (1970-today) Francophone cinema from diverse places such as but not limited to North Africa, West Africa (especially Senegal), Canada (especially Quebec) the Caribbean, Belgium, and Switzerland. The course is aiming at showing the evolution of the Francophone identity in the postcolonial period until now and is focusing on the following aspects: 1) The emergence and importance of postcolonial Francophone cinema in the 1970s
as a "cinema engage" (especially Sembene Ousmane in Senegal); 2) Contemporary issues of the postcolonial Francophone societies through films; 3) Representations of the cultural diversity in Francophone films; 4) Identity, race and immigration, women's status issues.

WLFR.3815 Francophone Caribbean Studies through Lit & Film - Credits: 3

This course explores major works from French Caribbean authors. Through novels, films, short stories, poetry, and play, we will uncover the historical, intellectual and social dynamics that define the French Caribbean world. A special emphasis will be placed on topics such as Ngritude, Antillanit, Croitit, and Migration.

WLFR.3820 Francophone Literature and Visual Arts of Senegal - Credits: 3

Senegal has particular significance in Francophone studies for the highly visible contributions of its writers and artists from the colonial era through today, and its emblematic role in cultural production in West Africa. Through film, literature, visual arts and other cultural productions in the country from the French colonial period up through today, we examine how artists have responded to the history and present legacies of colonialism through their creative works. The course is conducted in French.

WLFR.3825 Migration in Francophone Literature & Visual Arts - Credits: 3

The long history of migration in France, and its current visibility in politics and society make studying this theme in literature, film, and other cultural production fundamental to our understanding of mainland France today. This course focuses on written and visual texts connected to both France, and other regions of departure (including but not limited to North Africa and West/Central Africa). We examine key themes in texts focused on migration: labor, education and assimilation, family/next generations, and clandestine immigration. In addition to primary texts, secondary critical reading will ground discussion in postcolonial theory, gender studies, and francophone studies in order to understand the long tradition of these themes in francophone literature and film.

WLFR.3940 Enhancing and Advancing your Knowledge of French (Formerly 50.394) - Credits: 3

Designed for students who need/wish to enhance and advance their linguistic skills in French. Conducted entirely in French, the course will focus on the vocabulary of contemporary French as well as selected grammatical and syntactical structures through the analysis of French-speaking Media (newspapers, Radios, TVs) available on the Web.

WLFR.4910 Directed Studies in French Literature (Formerly 50.491) - Credits: 3

Individual research projects in French literature. Students, through regular and frequent consultation with their instructor, develop a course of directed study in French literature and define a problem for individual research. The student’s findings are presented in a paper of significant proportions.

WLFR.4920 Directed Studies French Composition (Formerly 50.492) - Credits: 3

Students, through regular and frequent consultation with their instructor, pursue a special program of composition or creative expression.

WLFR.4950 Advanced French Tutorial (Formerly 50.495) - Credits: 3

A program of directed study which affords the advanced student with an additional opportunity to pursue a previously explored problem in greater depth or to initiate a new problem. The purpose of the course is to sharpen and refine techniques for scholarly research, presentation and creative expression.

WLFR.4960 French Practicum Experience (Formerly 50.496) - Credits: 1-9

A program of on-campus and/or off-campus experiences (for French and Modern Language Majors only). Specific requirements vary depending upon faculty policies and the nature of the program undertaken by the student. The intent of the practicum experience is to provide an occasion for investigation of a community, social, cultural, or artistic area and for applying techniques of problem solving and/or skills which are appropriate to the student's major discipline. May be repeated for a maximum of nine credits. Students are graded "satisfactory" or "unsatisfactory". The practicum experience may not be substituted for a required course in the major.

WLGE.1010 German 1 and Culture (Formerly 51.101) - Credits: 3

Develops German speaking, listening, reading and writing skills through the discovery of the culture of German speaking countries in a communicative approach (instruction occurs in German with clarification in English). This class is the 1st of the 4-course German language program offered at UML. Language courses are sequential and must be taken accordingly.
WLGE.1020 German 2 and Culture (Formerly 51.102) - Credits: 3
Continuation of German 1 and Culture (or equivalent), which is a pre-requisite. Strengthens German speaking, listening, reading and writing skills acquired in German 1 and Culture through the discovery of the culture of German speaking countries in a communicative approach (instruction occurs in German with some clarification in English). This class is the 2nd of the 4-course German language program offered at UML. Language courses are sequential and must be taken accordingly.

WLGE.2110 German 3 and Culture (Formerly 51.211) - Credits: 3
Enhances the four skills acquired in German 2 and Culture (or equivalent), which is a pre-requisite: speaking, listening, reading and writing through the discovery of the culture of German speaking countries in a communicative approach (instruction occurs in German with minimal use of English). This class is the 3rd of the 4-course German language program offered at UML. Language courses are sequential and must be taken accordingly.

WLGE.2120 German 4 and Culture (Formerly 51.212) - Credits: 3
This course has German 3 and Culture (or equivalent) as a pre-requisite and is the 4th and last of the 4-course German language program offered at UML. The course strengthens the four skill acquired in prior levels. It emphasizes increased accuracy and depth of students' abilities and knowledge of the culture of German speaking countries in a communicative approach (instruction occurs in German with almost no use of English). Students express themselves orally and in writing at the national standards level of high-intermediate and understand key-concepts when spoken clearly at native speed.

WLGE.3000 Grimms' Fairy Tales (Formerly 51.300) - Credits: 3
This course will provide a study of the Grimms' fairy tales, their collection and publication by Jacob and Wilhelm Grimm in the contest of 19th century German Romanticism, and their enduring relevance to modern social commentary. Reading the texts in English translation, students will gain a critical understanding of the content and structure of the tales, of their cultural components, and their function through time to entertain, edify, and inform about life in the social milieu. The course is taught in English.

WLGE.3010 German Culture and Civilization -

WLGE.4920 Direct ed Study in German Composition (Formerly 51.492) - Credits: 3
This course examines the cultural and social development of Germany, from the end of World War II until now. This course analyzes the radical transformation of Germany through a deep identity crisis and the rising of new German generations. Germany's cultural, political and economical reconstruction will be discussed in readings, films, documentaries, architecture, pictures, and paintings. Course materials are in English or in German with English subtitles. This course is conducted in English.

WLGE.4950 Advanced German Tutorial (Formerly 51.495) - Credits: 3
A program of directed study which affords Modern Language majors an additional opportunity to pursue a previously explored topic in greater depth or to initiate an additional topic. The purpose of this tutorial is to sharpen and refine techniques of scholarly research, presentation and creative expression.

WLIT.1010 Italian 1 and Culture (Formerly 52.101) - Credits: 3
Develops Italian speaking, listening, reading and writing skills through the discovery of the culture of Italy in a communicative approach (instruction occurs in Italian with clarification in English). This class is the 1st of the 4-course Italian language program offered at UML. Language courses are sequential and must be taken accordingly.

WLIT.1020 Italian 2 and Culture (Formerly 52.102) - Credits: 3
Continuation of Italian 1 and Culture (or equivalent), which is a pre-requisite. Strengthens Italian speaking, listening, reading and writing skills acquired in Italian 1 and Culture through the discovery of the culture of Italy in a communicative approach (instruction occurs in Italian with some clarification in English). This class is the 2nd of the 4-course Italian language program offered at UML. Language courses are sequential and must be taken accordingly.
WLIT.2110 Italian 3 and Culture (Formerly 52.211) - Credits: 3
Enances the four skills acquired in Italian 2 and Culture (or equivalent), which is a pre-requisite: speaking, listening, reading and writing through the discovery of the culture of Italy in a communicative approach (instruction occurs in Italian with minimal use of English). This class is the 3rd of the 4-course Italian language program offered at UML. Language courses are sequential and must be taken accordingly.

WLIT.2120 Italian 4 and Culture (Formerly 52.212) - Credits: 3
This course has Italian 3 and Culture (or equivalent) as a pre-requisite and is the 4th and last of the 4-course Italian language program offered at UML. The course strengthens the four skill acquired in prior levels. It emphasizes increased accuracy and depth of students’ abilities and knowledge of the culture of Italy in a communicative approach (instruction occurs in Italian with almost no use of English). Students express themselves orally and in writing at the national standards level of high-intermediate and understand key-concepts when spoken clearly at native speed.

WLIT.3000 Modern & Contemporary Italian Civilization and Culture (Formerly 52.300) - Credits: 3
This interdisciplinary and multimedia course will provide a comprehensive view of Italian civilization from the Unification to the present. Through readings, movies, documentaries, pictures, and paintings, students will gain a critical understanding of many of the key events that have shaped Italian history, politics, and economy, and will be guided to discover questions of national identity, language, religion, gender and sexuality, ethnicity, immigration, media and fashion. Conducted in English (English reading material; film screenings In Italian with English subtitles.)

WLIT.3100 Special Topics in Italian Studies - Credits: 3
A limited topic of special interest in culture, civilization, or literature. May be taught in English or Italian. Course content and approach varies depending on instructor. The faculty post and distribute a detailed course description each semester, and students are urged to use this information in making their selections.

WLIT.3200 Special Topics: Italian Study (Formerly 52.320) - Credits: 3
Depends on faculty and student interests associated with Italian literature, composition and culture.

WLIT.3250 Italian American Literature and Culture (Formerly 52.325) - Credits: 3
Discusses the most prominent authors and works of Italian-American Literature as they, by using the ethnic setting, are able to convey universal human concerns and themes. The discussion on Italian-American ethnic issues will include such films as The Godfather, Moonstruck, The Sicilian, Goodfellas, and The Untouchables. Conducted in English.

WLIT.3300 Italian Women Writers (Formerly 52.330) - Credits: 3
Studies women writers of Italy by giving attention to the genres of narrative, poetry, theater and autobiography. Authors are selected according to their impact on issues affecting women, gender studies, feminism, avant-garde, modernism, social relations and psychological discourse. Conducted in English.

WLIT.3400 Readings in Contemporary Italian Literature - Credits: 3
This course covers selected works from contemporary Italian prose and poetry, with particular attention to texts written in the last twenty years. It focuses on textual analysis and interpretation, and is intended to improve students’ familiarity with idioms and vocabulary of contemporary Italian language. The course is taught in Italian and will advance students’ skills in all areas of Italian language and culture.

WLIT.3440 Advanced Italian Grammar - Credits: 3
A systematic study of complex grammatical structures in Italian. Conducted in Italian only.

WLIT.3450 Advanced Italian Conversation (Formerly 52.345) - Credits: 3
Advanced oral practice in rapid and idiomatic speech. Topics of contemporary significance are selected from contemporary prose.

WLIT.3500 Italian Language and Culture Through Films - Credits: 3
This course offers a systematic approach to learning Italian language and culture through films. It is designed to improve students’ language skills and enrich their knowledge of Italian contemporary society. This class is taught in Italian.

WLIT.3600 Advanced Italian Conversation and Composition - Credits: 3
The course aims at developing advanced written and oral proficiency. Topics of contemporary significance are selected for discussions. This class is taught in Italian.

WLIT.3730 Italian Humanism (Formerly 52.373) - Credits: 3
A study of the waning of the Middle Ages and the dawning of the Renaissance as seen through the work of Petrarch and Boccaccio. Emphasis is on the study of sources and the influence of Petrarch and Boccaccio upon the literatures of western Europe. Conducted in English.

WLIT.3780 Italian Cinema and Culture (Formerly 52.378) - Credits: 3
A guide to contemporary Italian studies through literary and cultural approaches. The works of central figures in contemporary Italian letters are examined in view of their impact on Italian life. Emphasis is given to poets, novelists, the new cinema, the influences of existentialism, and the impact of America on Italian literature. Conducted in Italian/English.

WLIT.3800 Italian Cinema: Directors and Themes (Formerly 52.380) - Credits: 3
A study of Italian film history and its accomplishment by exploring the relationship of cinema to sociopolitical, economic, cultural, and literary events. The course will discuss in depth either a) one or two major and well known directors; b) a major thematic and stylistic division in a century of cinematic creativity.

WLIT.4910 Directed Study in Italian Literature (Formerly 52.491) - Credits: 3
Individual research projects for modern language majors. Students, through regular and frequent consultation with their instructor, develop a course of directed study in Italian literature and define a subject for individual research. The student’s findings are presented in a paper of significant proportions.

WLIT.4920 Directed Studies Italian Composition (Formerly 52.492) - Credits: 1-6
Individual research projects for modern language majors. Students, through regular and frequent consultation with their instructor, pursue a special topic of composition or creative expression.

WLIT.4950 Advanced Italian Tutorial (Formerly 52.495) - Credits: 1-6
A program of directed study which affords Language majors an additional opportunity to pursue a previously explored topic in greater depth or to initiate an additional topic. The purpose of this tutorial is to sharpen and refine techniques of scholarly research, presentation and creative expression. Permission of Instructor.

WLIT.4960 Italian Practicum Experience (Formerly 52.496) - Credits: 3
A program of on-campus and/or off-campus experiences (for Italian and Language Majors only). Specific requirements vary depending upon faculty policies and the nature of the program undertaken by the student. The intent of the practicum experience is to provide an occasion for investigation of a community, social, cultural, or artistic area and for applying techniques of problem solving and/or skills which are appropriate to the student’s major discipline. The practicum experience may not be substituted for a required course in the major. Permission of Instructor.

WLKH.1040 Elementary Cambodian for Heritage Speakers - Credits: 3
This intensive, 3-credit Cambodian language and culture course is intended for heritage Cambodian speakers who already have a basic command of the spoken and written language. The course covers the reading, writing, speaking and listening skills comprising the Cambodian Language & Culture 1 & 2 course in a single semester. Contemporary news information is also presented on a weekly basis.

WLKH.1350 Cambodian 1 and Culture (Formerly 53.135) - Credits: 3
Development of fundamental skills in oral expression, aural comprehension, reading and writing is required in language courses. Beginning and intermediate language courses at the 135, 136 and 235, 236 levels must be elected in the prescribed sequence.

WLKH.1360 Cambodian 2 and Culture (Formerly 53.136) - Credits: 3
This course continues the oral practice, reading, writing, grammar and cultural studies begun in 53.135. Development of fundamental skills in oral expression, aural comprehension, reading and writing is required in language courses. Beginning and intermediate language courses at the 135, 136 and 235, 236 levels must be elected in the prescribed sequence.

WLKH.2040 Intermediate Cambodian for Heritage Speakers - Credits: 3
This intensive 3-credit Cambodian language and culture course is intended for heritage Cambodian speakers who already have successfully completed WLKH.1040, Elementary Cambodian for Heritage Speakers, or its equivalent. The course covers the reading, writing, speaking and listening skills comprising the Cambodian Language & Culture 3 & 4 courses in a single semester. Contemporary news information is also presented on a weekly basis.

WLKH.2100 Introduction to Cambodian Culture (Formerly 59.210) - Credits: 3

This 3-credit course focuses on the culture of Cambodia from ancient times to present. Specifically, this course provides an overview of the geography, demographics, monarchy, religion, architecture, dance & music, literature and performing arts in historical context. The course also requires students to examine contemporary Cambodia in terms of change continuity.

WLKH.2350 Cambodian 3 and Culture (Formerly 53.235) - Credits: 3

Development of fundamental skills in oral expression, aural comprehension, reading and writing is required in language courses. Beginning and intermediate language courses at the 135, 136 and 235, 236 levels must be elected in the prescribed sequence.

WLKH.2360 Cambodian 4 and Culture (Formerly 53.236) - Credits: 3

This course is a continuation of 53.235 Cambodian 3 and Culture, which is a pre-requisite. Development of fundamental skills in oral expression, aural comprehension, reading and writing is required in language courses. Beginning and intermediate language courses at the 135, 136 and 235, 236 levels must be elected in the prescribed sequence.

WLKH.3100 The Literary Cultures of Cambodia - Credits: 3

This course provides a survey of the role and function of literature and literary institutions in Cambodia. Selections of literature in translation from various genres (poetry, the short story, novels) are analyzed in terms of the development of the particular genre and its function vis-a-vis Cambodia’s cultural institutions. Similarly, the course examines the role of these cultural institutions in supporting the production of these literatures in different historical periods (classical to modern). Particular emphasis is given to the role of literature and literary institutions in the development of national and cultural identity during and after colonial rule.

WLKH.3200 Cambodian Culture in Lowell - Credits: 3

This course examines the emergence and growth the Cambodian American culture in Lowell from the early 1980s until the present. The course focuses on cultural and artistic organizations and events, such as the Angkor dance troupe and the Southeast Asian Water Festival within the changing political and historical context of Lowell during that period. Particular attention is given to the role of Cambodian cultural organizations and events in Lowell’s cultural economy, which includes Lowell’s art district and city organizations like the Cultural Organization of Lowell (COOL), the Merrimack Repertory Theater and the Lowell National Historical Park.

WLKH.3250 Contemporary Cambodian Cinema - Credits: 3

This 3-credit course examines Cambodian cinema and filmmakers from the 20th and 21st centuries. The course will include films in English or with English subtitles made by Cambodian filmmakers, as well as films about Cambodia made by foreign filmmakers. The course will be organized chronologically and thematically beginning with the first documentary films from the 1290’s produced by foreign filmmakers, to Cambodia’s “golden age” of cinema in the 1960’s, to films from the 1980’s about the genocide, to the fast-growing contemporary film scene in Cambodia. Students will view and examine the films in terms of their cultural context and how this context is reflected in the films’ plot, characters and perspective.

WLKH.3490 Literature, Politics and Genocide in Cambodia (Formerly 59.349) - Credits: 3

This course will examine various literary and political responses to the Cambodian genocide, particularly personal accounts or literary testimony by survivors and government sanctioned legal proceedings. The course will consider how the literary and political responses to the Cambodian genocide have at different times paralleled, complimented and opposed each other. The course will also ask whether their overall effect contributes to or detracts from the serving of justice and the process of healing for the survivors. To pursue these questions, we will read selections from novels and poetry written by Cambodian survivors side by side with accounts of political activities of the Cambodian government and the international community to bring the perpetrators of the genocide to justice.

WLKH.4930 Directed Study in Cambodian Culture (Formerly 53.493) - Credits: 1-6

Students through regular and frequent consultation with their instructor develop a course of directed study in Cambodian (Kmer) culture, and define a problem for individual research. The student’s findings are presented in a paper of significant proportions.
WLLA.3200 Special Topics in Latin Study (Formerly 56.320) - Credits: 3
Depends on faculty and student interests associated with Latin literature, composition and culture.

WLLA.4910 Directed Studies in Latin (Formerly 56.491) - Credits: 3
Individual research projects on Latin language and/or culture. Students, through regular and frequent consultation with instructor, pursue a special topic of research or translation. Permission of Instructor.

WLPO.1100 Portuguese for Spanish Speakers I (Formerly 53.110) - Credits: 3
Taught at a faster pace than a regular beginning course in Portuguese, is an introduction to the foundations of the Portuguese language and the cultural diversity of the Lusophone world for speakers of Spanish. Specific attention is devoted to the advantages and challenges that Portuguese presents to native or near-native speakers of Spanish. The course acknowledges that, in spite of the similarities between the two languages, there are important differences in pronunciation, vocabulary and grammatical structures. The course gives emphasis to all four language skill-listening, speaking, reading, writing—in order to achieve communicative goals. Portuguese is the language of instruction.

WLPO.1130 Portuguese 1 and Culture (Formerly 53.113) - Credits: 3
Development of fundamental skills in oral expression, aural comprehension, reading and writing is required in language courses. Beginning and intermediate language courses at the 113, 114 and 213, 214 levels must be elected in the prescribed sequence.

WLPO.1140 Portuguese 2 and Culture (Formerly 53.114) - Credits: 3
A continuation of 53.113 Portuguese 1 and Culture, which is a pre-requisite. Development of fundamental skills in oral expression, aural comprehension, reading and writing is required in language courses. Beginning and intermediate language courses at the 113, 114 and 213, 214 levels must be elected in the prescribed sequence.

WLPO.2130 Portuguese 3 and Culture (Formerly 53.213) - Credits: 3
Development of fundamental skills in oral expression, aural comprehension, reading and writing is required in language courses. Beginning and intermediate language courses at the 113, 114 and 213, 214 levels must be elected in the prescribed sequence.

WLPO.2140 Portuguese 4 and Culture (Formerly 53.214) - Credits: 3
A continuation of 53.213 Portuguese 3 and Culture, which is a pre-requisite. Development of fundamental skills in oral expression, aural comprehension, reading and writing is required in language courses. Beginning and intermediate language courses at the 113, 114 and 213, 214 levels must be elected in the prescribed sequence.

WLPO.3011 Special Topics: in Lusophone Studies (Formerly 53.301) - Credits: 3
An in-depth study of a specific topic in literature, culture, civilization from the Lusophone world. Class discussions, readings, oral and written work all in Portuguese or in English. May be repeated once for credit, if content changes, and with written consent of the Instructor.

WLPO.3020 Special Topics: in Portuguese Studies (Formerly 53.302) - Credits: 3
An in-depth study of a specific topic in literature, culture, civilization or cinema from Portugal. Class discussions, readings, oral and written work all in Portuguese or in English. May be repeated once for credit, if content changes, and with written consent of the Instructor.

WLPO.3030 Survey of Brazilian Cinema - Credits: 3
An introduction to Brazilian cinema and society, focusing on the Cinema Novo (New Cinema) of the 1960s and 1970s as well as more contemporary films influenced by the ideals of this movement. Films will be analyzed via reference to historical and theoretical texts. Topics to be addressed include Brazilian history as reflected in film and the formation of a distinct Brazilian aesthetic sensibility. Taught in English.

WLPO.3040 Survey of Brazilian, Portuguese and Lusophone African Cinema (Formerly 53.304) - Credits: 3
This course is designed as an introduction to film studies and to Brazilian, Portuguese and Lusophone African cinema and cultures. Taught in English. College Writing 1 (421 01) and College Writing 2 (42102).

WLPO.3050 Culture and Civilization of Brazil -
Credits: 3

This course is an introduction to Brazilian culture and society. Attention is given to history, geography, cinema, literature, art, and issues of race, gender, and social inequality as they lead toward a fuller understanding of Brazil. This course will cover major aspects of Brazilian society. The main texts review significant events and forces that have helped shape Brazil today. A variety of films and videos will be used. Course will be taught in English.

WLPO.3060 The Short Story in the Lusophone World - Credits: 3

This course will introduce students to the development of the short story in the Portuguese-speaking world from the 19th century to today. Through theoretical readings, discussion and writing activities, students will learn to analyze, ask critical questions of, and develop critical arguments about short fiction. Readings will be chosen from a variety of canonical authors from Brazil, Portugal, Cabo Verde, Mozambique, Angola, and Macau. Conducted in English.

WLPO.3070 The City in Contemporary Lusophone Literature and Film - Credits: 3

This course provides a comprehensive view of contemporary Lusophone urban space through literature and film. The course will explore the histories and cultures of the Portuguese-speaking countries by analyzing fictional texts and films related to their cities. Through readings and films, students will gain a critical understanding of many key events that have shaped Lusophone history, politics, and economy, and will be guided to discover, among others, themes related to national identity, language, ethnicity, migration, economic injustice, unhealed wounds of war, dictatorship, and colonialism. Conducted in English (English reading material; film screenings will be in Portuguese with English subtitles).

WLPO.3080 Lusophone Music and Culture - Credits: 3

This course will study the role of music and song in Lusophone cultures, including Brazil, Portugal, and Lusophone Africa. We will examine the historical and cultural evolution of some iconic music genres, including fado, samba, bossa nova, morna, and kizomba. Students will examine the social and political importance of music, including the politically engaged song from the 1960s and 1970s to today. Conducted in English.

WLPO.3090 Luso-Brazilian Women Writers in Translation - Credits: 3

This course studies a diverse selection of texts by women writers from Brazil and Portugal. This course further examines the differing strategies deployed by female-authored fiction, poetry, autobiography and essay as these negotiate genre and gender, and issues affecting feminism, social relations and psychological discourses. Conducted in English.

WLPO.3370 Portuguese Literature in Translation (Formerly 53.237) - Credits: 3

This course offers a broad overview of Portuguese literature, in English translation, from the Middle Ages to the contemporary period, placing literary movements and major authors in their historical and aesthetic context. It focuses on promoting a basic level of cultural literacy about Portugal based on representative reading drawn from the last seven centuries of the country’s history situated in their social, cultural and historic contexts. Course assignments lead students to develop skills in textural interpretation, critical thinking, and academic writing.

WLPO.3440 Advanced Portuguese Grammar - Credits: 3

A systematic review of Portuguese grammar and syntax, and the study and practice of the basic principles of writing in Portuguese. Taught in Portuguese.

WLPO.3450 Advanced Portuguese Conversation and Composition - Credits: 3

The course aims at developing advanced written and oral proficiency in Portuguese. Topics of contemporary significance are selected for discussions. Taught in Portuguese.

WLPO.4810 Directed Studies in Portuguese Composition (Formerly 53.481) - Credits: 3

Students, through regular and frequent consultation with their instructor, pursue a special program of composition or creative expression in Portuguese.

WLPO.4830 Independent Studies in Portuguese (Formerly 53.483) - Credits: 3

This course allows students to undertake research on non-literature related topic on the Portuguese speaking world that is not made available through normal course offerings. The syllabus for the independent study will specify the topic and readings for the course, as well as dates by which readings and written work must be completed, the frequency of required meetings, and how the grade for the course will be determined. As an independent study is an upper level course, there is substantial writing component.
WLPO.4850 Advanced Portuguese Tutorial (Formerly 53.485) - Credits: 3
A program of directed study affords advanced student to provide an additional opportunity to pursue a previously explored problem in greater depth or to initiate and additional problem. The purpose is to sharpen and refine techniques for scholarly research and presentation and for creative expression.

WLSP.1010 Spanish 1 and Culture (Formerly 54.101) - Credits: 3
Develops Spanish speaking, listening, reading and writing skills through the discovery of the culture of Spanish speaking countries in a communicative approach (instruction occurs in Spanish with clarification in English). This class is the 1st of the 4-course Spanish language program offered at UML. Language courses are sequential and must be taken accordingly.

WLSP.1020 Spanish 2 and Culture (Formerly 54.102) - Credits: 3
Continuation of Spanish 1 and Culture (or equivalent), which is a pre-requisite. Strengthens Spanish speaking, listening, reading and writing skills acquired in Spanish 1 and Culture through the discovery of the culture of Spanish speaking countries in a communicative approach (instruction occurs in Spanish with some clarification in English). This class is the 2nd of the 4-course Spanish language program offered at UML. Language courses are sequential and must be taken accordingly.

WLSP.1030 Medical Spanish (Formerly 54.103) - Credits: 3
This course is designed to develop basic conversational skills necessary to communicate with patients in a health care setting. Students will acquire a basic linguistic and cultural foundation enabling them to interview and manage patients in clinical settings using Spanish; to take a history and perform a physical exam using Spanish, and to interpret health concerns of Spanish-speaking populations. The course is designed for health care professionals.

WLSP.1050 Spanish Heritage Speakers I - Credits: 3
Spanish for Heritage Speakers I is targeted to students who are exposed to Spanish in their everyday life while growing up but have received limited or no formal instruction in this language. This course builds on the knowledge and experiences that students bring to the classroom by providing them with advanced sociolinguistic and grammar skills that will enable them to use Spanish for personal, social, and academic purposes. This course will also strengthen the students communication skills in Spanish and help them differentiate between the use of Spanish and English in formal and informal contexts. Students will reflect on issues around Hispanic and Latino identities, as well as on the linguistic and cultural diversity in Latin America, Spain and the United States.

WLSP.2110 Spanish 3 and Culture (Formerly 54.211) - Credits: 3
Enhances the four skills acquired in Spanish 2 and Culture (or equivalent), which is a pre-requisite: speaking, listening, reading and writing through the discovery of the culture of Spanish speaking countries in a communicative approach (instruction occurs in Spanish with minimal use of English). This class is the 3rd of the 4-course Spanish language program offered at UML. Language courses are sequential and must be taken accordingly.

WLSP.2120 Spanish 4 and Culture (Formerly 54.212) - Credits: 3
This course has Spanish 3 and Culture (or equivalent) as a pre-requisite and is the 4th and last of the 4-course Spanish language program offered at UML. The course strengthens the four skill acquired in prior levels. It emphasizes increased accuracy and depth of students’ abilities and knowledge of the culture of Spanish speaking countries in a communicative approach (instruction occurs in Spanish with almost no use of English). Students express themselves orally and in writing at the national standards level of high-intermediate and understand key-concepts when spoken clearly at native speed.

WLSP.2150 Spanish Heritage Speakers II - Credits: 3
Spanish Heritage Speakers II

WLSP.2210 Reading and Conversing in Spanish I (Formerly 54.221) - Credits: 3
Emphasizes Spanish grammar review and the development of reading and conversational skills. Selected contemporary works provide the basis for developing conversational comprehension and conversational and composition skills. This course is intended for students with a solid foundation in the Spanish language which had been gained from at least three years of high school study immediately prior to admission to the University.

WLSP.3005 LGBTQ and the Hispanic World - Credits: 3
This course will examine relevant works of 20th and 21st century LGBTQ+ Spanish speaking literature and visual
representations, including selections from well-known authors and a new generation of writers. We will explore these works within broad social and political contexts that extend from the beginning of the twentieth century to the present day. In this course, we will study how literature serves as a tool both for the expression of same-sex desire and for questioning political and social practices that have traditionally silenced non-heteronormative identities. Finally, we will discuss how LGBTQ+ literature defies aesthetic conventions to expand existing cultural frameworks and to create new ones that align with social and political progress. Taught in Spanish.

WLSP.3010 Introduction to Spanish Literature (Formerly 54.301) - Credits: 3
This course studies representative literary texts of Spain from its beginnings to present times. The readings exemplify various genres and reveal the complicated series of interactions, conflict, and influences which have contributed to its cultural diversity and relevance in today’s global context. Conducted in Spanish.

WLSP.3020 Survey of Latin American Literature (Formerly 54.302) - Credits: 3
A study of the major writers of Latin America from Native American literature to the modernist period. The authors and their works are placed in their historical, sociological, and literary perspective, thus introducing students to the Latin American World. Conducted in Spanish.

WLSP.3030 Modern and Contemporary Latin American Literature (Formerly 54.303) - Credits: 3
A continuation of WLSP 53.3020, Survey of Latin American Literature and Culture I. Conducted in Spanish.

WLSP.3040 Special Topics: in Latin American Studies (Formerly 54.304) - Credits: 3
An in-depth study of a specific topic in literature, culture, civilization or cinema from Latin American countries. Class discussions, reading, oral and written work all in Spanish. May be repeated once for credit, if content changes, and with written consent of the Instructor.

WLSP.3050 World Ready Topic Spanish Track - Credits: 3
This course, taught in English, is for non Spanish majors and minors. It is offered for students who are completing their language requirement through the World Ready option, and have chosen the Spanish track. The course covers a topic of the Spanish-speaking world’s culture, civilization, cinema or literature. Class discussions, readings, oral and written work all in English. Other materials could be in target language with translations or subtitles. May be repeated once for credit, if content changes, and with written consent of the instructor.

WLSP.3100 Spanish Civilization and Culture (Formerly 54.310) - Credits: 3
Considers Spanish culture and civilization up to the present. Through audiovisual aids, current newspapers and selected readings, the student will explore the Spanish way of being, thinking, and living. Emphasis is placed on the main contributions of Spain to the Western world. Conducted in Spanish only.

WLSP.3110 Contemporary Spanish Culture and Society - Credits: 3
Contemporary Spanish Culture and Society (1975-present) is a 3 credit course specifically designed for the UML summer faculty-led on-site program in Cadiz, Spain, over a period of 3 weeks (Dates TBA in July and August). Throughout our stay, as a group, we will discuss and exchange about the readings posted in advance on Blackboard (all in English) specifically reflecting upon the connections between what you learned, what you experienced personally in Spain and how different/similar this is from what you expected or imagined. Class is taught in English.

WLSP.3120 Cultural Representations of the Spanish Civil War - Credits: 3
This course will examine the war as the foundational trauma on which Spanish modernity and its cultural production are based. With this goal in mind, this course will examine the representation and understanding of the Civil War through the lens of Francoist, Communist, and Anarchist discourse. We will explore different ideological representations of the war in conjunction with a variety of aesthetic perspectives, such as realism, avant-garde, testimonial literature, and existentialism. We will also complement the study of literature with the representation of this event through film and photography produced during and after the Civil War.

WLSP.3130 Fieldwork in the Spanish Community (Formerly 54.313) - Credits: 3
Involves individual assignments under the sponsorship of local service agencies servicing the Spanish-speaking community involving individual family and group contact. Written and oral reports will be in Spanish.

WLSP.3150 Latin American Civilization and Culture (Formerly 54.315) - Credits: 3
Considers significant intellectual, artistic, historical, and sociopolitical aspects of Latin America from the beginning of its history. Through audiovisual aids and selected readings, the student will explore the Latin American way of being and expressing.

**WLSP.3200 Special Topics in Spanish Studies**  
(Formerly 54.320) - Credits: 3

Focuses on a limited topic of special interest in culture, civilization, or literature. May be taught in English or in Spanish. Course content and approach will vary depending on instructor.

**WLSP.3300 Spanish and Latin-American Women Writers (Formerly 54.330) - Credits: 3**

Studies women writers of the Spanish speaking world. Emphasis is given to their contribution to the development of Spanish literature and culture as well as their vision of the world and their concerns for the rights of women and humanity. Conducted in Spanish only.

**WLSP.3330 Advanced Spanish Grammar (Formerly 54.333) - Credits: 3**

A systematic study of complex grammatical structures in Spanish. Conducted in Spanish only.

**WLSP.3340 Advanced Spanish Composition**  
(Formerly 54.334) - Credits: 3

The purpose of this course is to help students make their writing more accurate, organized and to develop students abilities in composition tasks. Specifically, students will learn how to approach the act of writing successfully by focusing on the interaction between writer, reader, purpose, and message. Students will also learn to manage important writing resources such as grammar, vocabulary, rhetorical techniques for organizing information, and strategies for writing through problems, reading critically, revising, and rewriting. Required for Spanish Majors.

**WLSP.3470 Advanced Spanish Conversation**  
(Formerly 54.347) - Credits: 3

The course aims at developing advanced oral proficiency in rapid idiomatic speech. Topics of contemporary significance are selected for discussions. Required for Spanish Majors.

**WLSP.3500 Introduction to Literary Analysis**  
(Formerly 54.350) - Credits: 3

In this course, students examine the various definitions and functions of literary language, and the formal aspects of diverse genre: narrative, poetry and essay. In this course, students also study the concept of literature as aesthetic phenomenon and its socio-cultural implications, through concepts such as author, reader, narrator and discourse, Major authors, themes, and genres from both Latin America and Spain are included, with basic concepts of contemporary literary criticism and theory. Taught in Spanish.

**WLSP.3510 Latin American Theater**  
(Formerly 54.351) - Credits: 3

Examines Latin American theatrical works as forms of socially accepted resistance and politically charged art forms. The course will consider plays and performances that challenge governments, inequities, and the status quo. In this course, students will study a variety of Latin American plays, as well as performances an political acts that explore these issues.

**WLSP.3520 Hispanic Perspectives**  
(Formerly 54.352) - Credits: 3

In this course we will explore some of the foundational texts of Hispanic literature while discussing the intersections of political, literary, and cultural traditions that connect the United States with Spain and Latin America.

**WLSP.3710 Hispanic Literature & Film**  
(Formerly 54.371) - Credits: 3

This course examines the relationship between the Hispanic narrative discourse and cinema, including film adaptations of literary works. Modern social and cultural issues, as well as Hispanic self-images. The selected works provide an array of genres and perspectives that reflect the cultural, historical, and socio-political aspects of each period. Taught in Spanish.

**WLSP.3750 Latin American and Spanish Cinema**  
(Formerly 54.375) - Credits: 3

An exploration of representative Spanish and latin American films from a variety of major directors. Areas of investigation include the cinematic representation of nationality, ethnicity, identity, gender, history and politics. This course will be taught in English. Knowledge of Spanish is desirable but not required. Spanish majors and minors will complete written assignments, reviews, quizzes, and exams in Spanish.

**WLSP.3940 Enhancing your Knowledge of Spanish** - 
Credits: 3

Designed for students who need/wish to enhance and advance their linguistic skills in Spanish. Conducted entirely in Spanish,
the course will focus on the vocabulary of contemporary Spanish as well as selected grammatical and syntactical structures through the analysis of authentic audio, visual and printed texts. Spanish-speaking media (newspapers, radio, podcasts, TV) are readily available on the Web.

**WLSP.4010 Spanish Selected Authors (Formerly 54.401) - Credits: 3**

Presents an intensive study of the works by a few Spanish and/or Latin American authors.

**WLSP.4040 Cervantes (Formerly 54.404) - Credits: 3**

In this study of the works of Cervantes participants will complete analysis and readings of either the Don Quijote and/or other works including but not limited to the short stories and the one-act plays.

**WLSP.4045 Cervantes' Don Quijote in translation - Credits: 3**

Cervantes' Don Quijote will examine new ideas and concepts concerning one of the world's greatest novels. Taught in English, there is no language requirement for this course; however, this course is designed to engage student interest in historically and culturally significant events in Golden Age Spain and to - more importantly - expand student interest in literary criticism of the Spanish Golden Age and of Cervantes' masterwork in particular. Because it is taught in English, this course does not count toward the Spanish major or minor.

**WLSP.4090 20th-221st Century Spanish Literature (Formerly 54.409) - Credits: 3**

This course explores the most relevant literary movements of 20th and 21st century Spanish peninsular literature through some of its most renowned authors. We will analyze a selection of literary texts in relation to the literary movements in which they are conceived, such as modernism, avant-garde, tremendism, realism, experimentalism, etc. This course also examines key social and cultural issues related to literature of this period, such as the Spanish Civil War (1936-39) and the emergence of new identities and subjectivities in democratic Spain. This course will help students develop a solid understanding of 20th and 21st century Spanish literary and culture, and its relevance within a larger European and global context.

**WLSP.4100 Realism and the Nineteenth Century Spanish Novel (Formerly 54.410) - Credits: 3**

Offers a study of fundamental aspects of life, thought, land itself and its sense of history as reflected in the literary masterpieces of Valera, Galdos, Alarcon, Pereda, and others. An analysis of the literary techniques and fiction of the Realism will be included.

**WLSP.4160 The Latin American Novel (Formerly 54.416) - Credits: 3**

A study of the development of the Latin American novel. Three major works of Latin American short story writers such as Borges, Cortazar, Marquez, Rulfo.

**WLSP.4910 Directed Studies in Spanish Literature (Formerly 54.491) - Credits: 3**

Individual research projects in Spanish literature. Students, through regular and frequent consultation with their instructor, develop a course of directed study in Spanish literature and define a problem for individual research. The student's findings are presented in a paper of significant proportions. Permission of Instructor.

**WLSP.4920 Directed Study in Latin America (Formerly 54.492) - Credits: 1-4**

Individual research projects in Latin American topics. Students, through regular and frequent consultation with their instructor, develop a course of directed study in a specific Latin American topic and define a problem for individual research. The student's findings are presented in a paper of significant proportions. Permission of Instructor.

**WLSP.4930 Directed Studies in Spanish Composition (Formerly 54.493) - Credits: 3**

Students, through regular and frequent consultation with their instructor, pursue a special program of composition or creative expression.

**WLSP.4940 Independent Study in Spanish (Formerly 54.494) - Credits: 1-6**

Students, through regular and frequent consultation with their instructor, develop a course of independent study in Spanish culture and define a problem for individual research. The student's findings are presented in a paper of significant proportions.

**WLSP.4950 Advanced Spanish Tutorial (Formerly 54.495) - Credits: 3**

A program of directed study which affords advanced students an additional opportunity to pursue a previously explored
problem in greater depth or to initiate an additional problem. The purpose is to sharpen and refine techniques for scholarly research and presentation and for creative expression.

WLSP.4960 Spanish Practicum Experience (Formerly 54.496) - Credits: 1-9

A program of on-campus and/or off-campus experiences for Spanish or Modern Language majors only. Specific requirements vary depending upon faculty policies and the nature of the program undertaken by the student. The intent of the practicum experience is to provide an occasion for investigation of a community, social, cultural, or artistic area and for applying techniques of problem solving and/or skills which are appropriate to the student’s major discipline. May be repeated for a maximum of nine credits. Students are graded satisfactory, or unsatisfactory. The practicum experience may not be substituted for a required course in the major.
College of Fine Arts, Humanities & Social Sciences

Degree Pathways are a sample semester-by-semester sequence of courses which might be followed for successful completion of a degree, diploma, credential or certificate from the university. Students should follow the degree pathway appropriate to their catalog year. A students catalog year is typically defined by the date of their entry into the University of Massachusetts Lowell.

MUHI.1010 European Art Music (Formerly 74.101) - Credits: 1

An aural introduction to the various types of European concert music from the 18th through the 20th century. This course emphasizes aural acquaintance with literature and genre and consists of in-class listening and discussion designed to enhance the aural experience. Required of all first year music majors as a prerequisite to Music History 1 and 2.

MUHI.1020 Introduction To Non European Musics (Formerly 74.102) - Credits: 1

An introduction to selected world musics from a contextual perspective which explores music as an integral part of both society and culture and its function in labor, ritual and celebration. Aspects of instrumental classification, spontaneity and improvisation, as well as elements of music as both organized sound and silence in all cultures will be considered. This includes timbre, melody, rhythm, harmony, form, and texture. Required of all first year music majors as a prerequisite to Music History 1 and 2.

MUHI.1040 Musical Practices I (Formerly 74.104) - Credits: 1

Musical Practices I includes the basic study of musical elements, vocabularies, and concepts in Western musical traditions, supplemented with global perspectives. Students will develop critical inquiry skills to study how music is experienced throughout Western culture, broadening the student's understanding of different musical structures, diverse arenas of production, while exploring professional, creative outlets for this knowledge. At the same time common conventions of musical style will be examined which tie the Western tradition together regardless of when or where the music originated.

MUHI.1050 Musical Practices 2 (Formerly 74.105) - Credits: 1

Musical Practices 2 builds upon the basic study of musical elements, vocabularies, and concepts established in Musical Practices 1, extending the exploration of these principles in more depth, with a primary focus on non-western musical traditions and cultural practices.

MUHI.2161 Music of Western Civilization: Antiquity-Mid 18th Century (Formerly 74.161/MUHI.1610) - Credits: 3

Students will listen to and learn to understand Western European Art music from the earliest times through the Middle Ages, Renaissance, Baroque, and 18th-century Classical era. We will examine significant composers, forms, and styles, and explore such things as the kinds of music people sang and played, the instruments they played, how music has been used in worship and in the theater, how the historical context influenced composers’ procedures and decisions, how music from several hundred years ago has influenced music of today, and why music has been on of the most enduring forms of community and culture in Europe and America. Open to non-music majors only.

MUHI.2162 Music of Western Civ.: Classical Era±21st Century - Credits: 3

Overview of basic elements common to all music of Western Culture, such as melody, harmony, rhythm, timbre, and texture, followed by a survey of music from the late eighteenth-century Classical era into the 21st century. Significant forms, styles, composers, and aesthetic concepts are examined, including the music of such composers as Beethoven, Tchaikovsky, Debussy, and Stravinsky. Open to non-music majors only. Prerequisite: none.

MUHI.2610 Music History 1 (Formerly 74.261) - Credits: 3

Studies sacred and secular musical forms from pre-Christianity to 1750.

MUHI.2620 Music History 2 (Formerly 74.262) - Credits: 3

Analyzes musical forms and styles from 1750 to present.

MUHI.3010 American Music (Formerly 74.301) - Credits: 3

An historical, cultural and contextual survey of diverse styles of concert and vernacular music in the United States from the colonial era to the present. Open to music and non-music majors.

MUHI.3110 American Musical Theatre (Formerly 74.311) - Credits: 3

An intensive study of the position of the American musical theater, this course examines contributions to musical thought, and traces the development of the musical style from its origins to the present through musical study and analysis, historical research, and critical interpretation.

MUHI.3550 Jazz (Formerly 74.355) - Credits: 3

An intense study of the history of jazz from its origins to the present, covering a wide selection of styles and schools of jazz.
in various ensemble configurations.

MUHI.3610 History Of Opera - Credits: 3
MUHI.3860 History of Rock Music (Formerly 74.386) - Credits: 3
Traces the roots of American popular music from its origins and influences from the earliest European song forms to American folk songs, Gospel, Country, Rhythm and Blues, Jazz, and other popular forms up through current trends as related to the development of the music industry and other socio-musical influences of the commercial song from the 1500s to the present.

MUHI.4001 Introduction to Ethnomusicology - Credits: 3
This course is designed to introduce students to the basic principles of ethnomusicology beginning with a survey of the historical development of ethnomusicological thought from the late 19th century to the present. Fieldwork methodology will be examined in depth, and a final project incorporating interviews, field observation, and musical transcription will allow students to put theory into practice. Permission of Instructor.

MUHI.4040 History of Record Production - Credits: 3
This course surveys the emergent technologies and processes of sound recording from the late 19th century to the present, specifically focusing on the techniques and styles record producers and recording engineers utilize in shaping the conception of musical sound and performance for musicians and their audiences.

MUHI.4560 Film Music (Formerly 74.456) - Credits: 3
A study of music in sound cinema from the 1920s to the present. The course focuses on the expressive, formal, and semiotic function that film music serves, either as sound experienced by the characters, as another layer of commentary to be heard only by the viewer, and/or some mixture of the two. Composers to be studied include Max Steiner, Bernard Hermann, Jerry Goldsmith, John Williams, Danny Elfman, and others, as well as film scores that rely upon a range of musical styles, including classical, popular, and non-Western. The singularly most important goal of the course will be to study how music functions in a given film, regardless of its musical style. In the process, ancillary ideas will emerge including discovering how music establishes psychological moods, guides emotions, and reveals aspects of the narrative structure of the film. By the end of the course, the student will have gained a greater understanding of both music and film and it is likely that students will never watch or listen to another movie in quite the same way.

MUHI.4950 Directed Study: Music History (Formerly 74.495) - Credits: 3
Individual work under the supervision of a member of the music history faculty. May be repeated with permission of the chairperson.

MUTH.1000 Fundamentals of Musicianship (Formerly 71.100) - Credits: 3
A study of the visual and aural symbolics of music and their application to the comprehension of the architectural, organizational, and aural elements of music literature.

MUTH.1010 Music Theory 1 (Formerly 71.101) - Credits: 3
An intensive study of the theoretical language of music. Stresses part writing in S.A.T.B. and basso continuo realization with a free instrumental part which utilizes free voice leading relative to the use of non-harmonic activity and the harmonic principles through first and second inversion triads. Instruments of the string section are covered, and appropriate listening assignments are given. Original composition in the style being studied is required.

MUTH.1020 Music Theory 2 (Formerly 71.102) - Credits: 3
Serves as a continuation of the practices of 71.101 relative to part writing (both vocal and instrumental) including secondary triads, the Neapolitan sixth, modal interchange, dominant sevenths in inversion and root position, modulation, and secondary dominants. Instrumentation covers the woodwind section, and original composition in the style being covered is required.

MUTH.1030 Aural Skills 1 (Formerly 71.103) - Credits: 1
Development of basic sight singing, listening, and dictation skills as they relate to music theory and analysis. Activities include singing (using moveable do/tone do solmization), listening, and dictation (melodic, harmonic and rhythmic) of diatonic music. Music majors only. Coreq. 710.101

MUTH.1040 Aural Skills 2 (Formerly 71.104) - Credits: 1
Development of basic sight singing, listening and dictation
skills as they relate to music theory and analysis. Activities include singing (using moveable do/tonic do solmization), listening, and dictation (melodic, harmonic and rhythmic) of more diatonic music. Music majors only. Prerequisite: 71.101 and 71.103. Coreq. 71.102

MUTH.1050 Freshman Chorus (Formerly 71.105) - Credits: 0

A vocal ensemble consisting of all first-year music students, the Choir aims to build a community among those students by having them all share a common experience. Whether they have an extensive musical background or are novice musicians with little or no formal training, the First-Year Choir is intended to help students overcome the natural apprehensions that are associated with the first year of college. Additionally, the Choir will encourage ALL students to be comfortable singing in front of their peers and instructors, thereby making their experience in Aural Skills less daunting.

MUTH.1080 Musicianship & Analysis 1 (Formerly 71.108) - Credits: 4

An intensive, critical and integrated study of musical concepts. Through applied experiences composing, improvising, writing, performing, listening, and analyzing, students will explore and develop competencies in hearing, understanding and applying concepts of musical sound, timbre, and texture; time, shape, and form; pulse; meter; rhythmic subdivision; melodic contour; plainchant; pentatonic melodies; and interlocking melodic systems.

MUTH.1090 Musicianship & Analysis 2 (Formerly 71.109) - Credits: 4

An intensive, critical and integrated study of intermediate macro, meso, and micro concepts of music and musicianship. Through applied experiences composing, improvising, writing, performing, listening and analyzing, students will explore and develop competencies in hearing, understanding and applying concepts of compound meters; rhythmic subdivision (expanded); major and minor scales; counterpoint; triadic harmony; phrases and cadences; and song forms.

MUTH.1100 Basic Music Theory (Formerly 71.110) - Credits: 3

This beginning music theory course provides an introduction to the basics of sound: reading music in bass and treble clefs; diatonic and chromatic notes; note and rest values; rhythm, meter, and time signatures; intervals; modes and scales; key signatures; and triads. Non-majors only.

MUTH.1110 Basic Music Theory 2 (Formerly 71.111) - Credits: 3

Basic Music Theory 2 builds upon the music theory concepts and skills developed in Basic Music Theory (71.110). This class will include an introduction to the structure of tonality; diatonic chords in keys; counterpoint; chord inversion; figured bass; voice-leading in four voices; seventh chords; phrases and cadences; embellishing tones; principles of harmonic progression, and analysis. Non-Music Majors only.

MUTH.1200 Musicianship and Analysis Keyboard Lab (Formerly 71.120) - Credits: 2

This lab will provide basic keyboard skills required to successfully complete the Musicianship and Analysis sequence including understanding the piano keyboard, notational reading skills in both treble and bass clefs, fingering techniques, left and right hand coordination, and approaches to chord voicings and the execution of melodic improvisation.

MUTH.2010 Music Theory 3 (Formerly 71.201) - Credits: 3

A continuation of practices of Music Theory II relative to part writing both vocal and instrumental including remote modulation and satellite keys, the diminished seventh, augmented sixth, ninth, eleventh, and thirteenth extensions, sequential secondary dominants and secondary sevenths. Instrumentation covers the brass section; original work in the style being covered and in various formal configuration is required.

MUTH.2020 Music Theory 4 (Formerly 71.202) - Credits: 3

A study of twentieth century music theory via a compositional approach relative to tertial, quartal, and secundal vertical sonorities, and linear combinations featuring modal and synthetic scale resources as well as serial and preserial atonality.

MUTH.2030 Aural Skills 3 (Formerly 71.203) - Credits: 1

Presents an intensive application of requisite skills to chromatic and non-diatonic music, changing and composite meters, displaced accents, cross rhythms, and a vertical approach to reading often necessary in the study of scores. Advanced tonal as well as tonal literature is considered. Harmonic dictation continues to follow the sequence and progress of 71.201.

MUTH.2040 Aural Skills 4 (Formerly 71.204) - Credits: 1
A concentration on the techniques employed in solving the notation and musical problems of the music of the 20th century. The consideration include synthetic and nonwestern scales, pitch sets and twelve-tone serialism.

MUTH.2080 Musicianship & Analysis 3 (Formerly 71.208) - Credits: 4

An intensive, critical, and integrated study of intermediate macro, meso, and micro concepts of music and musicianship. Through applied experiences composing, improvising, writing, performing (vocally, on keyboard and on the students primary instrument), listening and analyzing, students will explore and develop competencies in hearing, understanding and applying concepts of pitch modes; syncopation; mixed meters; extended harmony; expanded song forms, and multi-timbral transcription.

MUTH.2090 Musicianship & Analysis 4 (Formerly 71.209) - Credits: 4

An intensive, critical, and integrated study of advanced macro, meso, and micro concepts of music and musicianship. Through applied experiences composing, improvising, writing, performing (vocally, on keyboard and on the students primary instrument), listening and analyzing, students will explore and develop competencies in hearing, understanding and applying concepts of multi-timbral transcription; chromaticism; microtonal intonation; polyrhythm; extended modulations; altered chords and extensions; polytonality; and atonality.

MUTH.3001 Songwriting - Credits: 3

This course is designed to facilitate a greater range of creative expression for aspiring songwriters by analyzing the musical and lyric components of song composition, posing songwriting problems to be solved, and developing an identifiable musical style.

MUTH.3350 Arranging (Formerly 71.335) - Credits: 3

Analysis and practical application of techniques of scoring for vocal and instrumental combinations in varied configurations. Scoring projects for in-class performance, effective arranging of music in a variety of styles, and problem solving for the arranger will be included.

MUTH.4950 Directed Study in Music Theory (Formerly 71.495) - Credits: 3

Individual work under the supervision of a member of the music theory faculty on a wide variety of topics approved by the instructor and the theory faculty. Permission of chairperson required.
Sample Degree Pathway for Music Business

For students who entered prior to fall 2015.

1 Consult with your advisor. Depending upon internship
placement, this course may not be required.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum policy for further details. You should meet with your faculty adviser to determine how you will meet the Core Curriculum requirements.

- Department Specific Policies
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

Please see advisor or contact the Music Department for more specific requirements pertaining to Freshman Chorus, Recital Attendance, Applied Music, Ensembles and Internships.

Current UMass Lowell students should be using their Advisement Report in SiS (http://www.uml.edu/enrollment/sis/default.aspx). If you need assistance, please contact your adviser.

Restriction on off-campus study:

Be advised that any course taken at another institution must be formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the catalog policy (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

*Consult with your advisor. Depending upon internship placement, this course may not be required.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum policy for further details. You should meet with your faculty adviser to determine how you will meet the Core Curriculum requirements.

- Department Specific Policies

Please see advisor or contact the Music Department for more specific requirements pertaining to Freshman Chorus, Recital Attendance, Applied Music, Ensembles and Internships.

Current UMass Lowell students should be using their Advisement Report in SiS (http://www.uml.edu/enrollment/sis/default.aspx). If you need assistance, please contact your adviser.

**Restriction on off-campus study:**

Be advised that any course taken at another institution must be formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the catalog policy (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

_Last updated: 3/17/2022_
MUBU.2010 Computers In Music Business (Formerly 77.201) - Credits: 3

This course provides students with fundamental collaborative computing tools applicable to the music industry. Topics will include standard office applications, web tools, and media processing tools. Students will develop skills and efficiency through collaboration with each other and outside artists. The internet will provide opportunities for researching relevant sharing platforms for the effective dissemination of information. Projects to include e-press kit creation/promotional website, video creation, and other media development.

MUBU.3010 Music Business 1 (Formerly 77.301) - Credits: 3

A systematic look at career options in the Music Industry. Topics discussed include: songwriting, music publishing, national and international copyright law, music licensing, artist management, and concert promotion.

MUBU.3020 Music Business 2 (Formerly 77.302) - Credits: 3

A systematic look at career options in the Music Industry. Topics include: music merchandising, arts administration, record promotion, marketing, and distribution, radio and television broadcasting, advertising and jingle production, and film scoring.

MUBU.3030 Music Publication and Copyright (Formerly 77.303) - Credits: 3

A thorough study of the legal environment within the Music Industry. Topics discussed include: music publishing, national and international copyright law, live performance, managers & agents, music organizations, recording agreements, music publishing, film and television music production, music merchandising, and other contractual obligations.

MUBU.3040 Music Promotion and Merchandising (Formerly 77.304) - Credits: 3

A thorough study of the principles and application of marketing, promotion, and distribution of products within the Music Industry. Case studies of various music products and companies will be studied and analyzed.

MUBU.4010 Music Business Seminar (Formerly 77.401) - Credits: 3

Prepares students to undertake their Internship by providing an in-depth study of how to prepare successfully to enter a career path.

MUBU.4040 Music Business Entrepreneur (Formerly 77.404) - Credits: 3

An in-depth study of how to start a successful business within the Music Industry. Case studies of successful entrepreneurs and their companies will be researched and analyzed. Students will develop a written Business Plan for their own Music Business enterprise.

MUBU.4950 Directed Studies In Music Business (Formerly 77.495) - Credits: 3

Permission of coordinator required.

MUBU.4991 Music Business Internship (Formerly 77.499) - Credits: 6

Music Business Internship
LMUCM.1990 Music Composition 1000 Elective - Credits: 3
Music Composition 1000 Elective.

LMUCM.2990 Music Composition 2000 Elective - Credits: 3
Music Composition 2000 Elective.

LMUCM.3990 Music Composition 3000 Elective - Credits: 3
Music Composition 3000 Elective.

LMUCM.4990 Music Composition 4000 Elective - Credits: 3
Music Composition 4000 Elective.

MUCM.1010 Audio Production Fundamentals - Credits: 1
An introduction to sequencing, looping, editing, and mixing concepts in digital audio workstations. Students learn basic digital gain staging, scoring and sound design, realization of MIDI mock ups, audio theory, file maintenance and workflow strategies through hands-on laboratory exercises with keyboard controllers, software synthesizers, and sample libraries.

MUCM.1030 Applied Composition I - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUCM.1040 Applied Composition 2 - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUCM.1990 Music Composition 1000 Level Elective - Credits: 3
Music Composition 1000 Level Elective.

MUCM.2010 Keyboarding for Arrangers I - Credits: 1
Group instruction in basic re-harmonization techniques and their practical application for realizing original compositions. The course explores block chords, arranging concepts, modal textures, and counterpoint. Students develop keyboarding techniques for arranging purposes.

MUCM.2020 Keyboarding for Arrangers II - Credits: 1
A deeper exploration of re-harmonization techniques and voicing concepts along with their applications in medium and large ensemble writing. Students apply block-chord techniques, transcription, and simple improvisation to realize new arrangements and compositions along with developing functional two-handed keyboard technique in a variety of contemporary styles.

MUCM.2030 Applied Composition 3 - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUCM.2040 Applied Composition 4 - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUCM.2080 Advanced Music Editing and Production - Credits: 2
Editing concepts are developed and refined during the post-production phase. Students learn tempo-mapping techniques, advanced synchronization with dialog and effects, mixing and final delivery concepts so that soundtrack elements appropriately support the visual medium. Students explore the role of temporary scores to guide creative and editing decisions. Students transcribe and prepare scores for a variety of ensembles and learn the principles of transposition, ornamentation, layout and note accuracy. Final project includes an original notated score for visual media. Permission of Instructor.

MUCM.2090 Digital Synthesis and Remixing -
Credits: 3
This course introduces the concept of the "sound collage" for creative purposed. Students gather commonly accessible sounds with portable recorders and explore synthesis techniques using digital audio workstations. The course explores the expressive role of sound in commercial applications, mash ups, and music composition. Includes a historical overview and discussion of eletroacoustic music.

MUCM.2990 Music Composition 2000 Level Elective - Credits: 3
Music Composition 2000 Level Elective.

MUCM.3010 Creative Applications in Sound Design - Credits: 3
The role of sound design is explored in interactive media, live performance, web and mobile platforms and visual content. Students compose original soundtrack elements through field recordings, ambient spaces, and creative environments using coding language. Historical analysis of the role of sound in film, television, games, and interactive media supports laboratory exercises and group projects.

MUCM.3020 Commercial Music Arranging - Credits: 3
Contemporary jazz arranging for instruments and voice. Course includes topics such as melodic development, stylistic diversity, rhythm section considerations, virtual s. acoustic instrumentation, sequences and loops, range and articulations, background figures and five-part writing. Final project includes and original "Supersax" arrangement for modern studio instrumentation.

MUCM.3030 Applied Composition 5 - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUCM.3040 Applied Composition 6 - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUCM.3050 Special Topics in Composition - Credits: 3
This course explores interdisciplinary collaboration with the Art, Theater, and Digital Media areas. Contemporary issues and practices in music composition are explored through approved practicum experiences, directed study, guest lectures, group collaborative projects, and independent research.

MUCM.3060 Composition Seminar - Credits: 2
Group instruction in writing for solo performers and small ensembles. Students write individual pieces and receive weekly feedback from peers and faculty members. The composer-artist relationship is explored in depth along with a live recital performance of student compositions.

MUCM.3070 Sound Narrative - Credits: 2
This course introduces creative applications of sound for inclusion in long-form narrative structures including soundscapes, podcasts, and installations, with a particular emphasis on the immersive role of sound in documenting authentic and abstract environments. The course explores the pioneering work of artist/composers including Barry Truax, Bernard Krause, Brian Eno, and includes discussions of listener perception and acoustic ecology. Basic approaches in surround sound mixing are explored to support compositional practice.

MUCM.3090 Eurhythmics and Improvisation - Credits: 1
Instruction in Dalcroze Eurhythmics concepts. Topics include rhythmic movement, body motion, multimodal ear-training approaches, improvisation and performance aesthetics. Students learn complex rhythmic concepts through simple dance motions, group interaction, and multi-sensory listening. Course includes approaches for solo and group improvisation for composers and performers.

MUCM.3160 Digital Orchestration and Counterpoint - Credits: 3
Writing and arranging or large ensembles using high quality sample libraries. Melodic development concepts are explored along with basic orchestration principles for strings, woodwinds, brass, and percussion. MIDI optimization concepts including quantization, key switching, and multi-timbral layers are refined through laboratory projects.

MUCM.3990 Music Composition 3000 Level Elective
Music Composition 3000 Level Elective.

MUCM.4000 Music and Sound for Games - Credits: 3
Integration of original music, sound effects, and dialog assets into standard game engine software. The course explores audio implementation, scripting and basic coding concepts using middleware platforms. Permission of instructor.

MUCM.4010 Scoring for Visual Media - Credits: 3
Creating fully realized musical scores for video, television, web, and advertising. Tempo and synchronization issues are addressed along with basic sound design concepts. Students analyze the role of music in supporting the visual image along with comprehensive study of successful composers of the past three decades.

MUCM.4020 Music and Multimedia Production - Credits: 3
This course introduces multi-platform production approaches in music and sonic composition. Students explore the fundamentals of still-image and color manipulation, video editing, and contemporary recording techniques for creative purposes. Composers are encouraged to write multi-channel pieces that explore sound in diverse environments. Students learn basic video editing, motion graphics and color manipulation.

MUCM.4030 Applied Composition 7 - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUCM.4040 Applied Composition 8 - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUCM.4070 Contemporary Styles and Analysis - Credits: 3
Twentieth-century compositional practices are studied from a variety of musical, cultural, social, political, and creative perspectives. The availability and impact of technology on compositional aesthetics is explored along with discussions about emerging trends in new media, sound art,, installations, and mobile technology.

MUCM.4090 Senior Project Capstone - Credits: 3
Students must propose a final project before their senior year to be completed under faculty supervision. The project demonstrates the student’s mastery of contemporary music composition and/or sound design concepts, critical thinking, interdisciplinary collaboration, and reflective practices. Students may collaborate with other departments with Coordinator/Department Chair approval.

MUCM.4990 Music Composition 4000 Level Elective - Credits: 3
Music Composition 4000 Level Elective.
## Sample Degree Pathway for Music Performance - Instrumental Option

### Total Minimum Credits = 120-122

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum ([link](https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)) policy for further details. You should meet with your faculty adviser to determine how you will meet the Core Curriculum requirements.

- Department Specific Policies ([link](https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf))

Please see advisor or contact the Music Department for more specific requirements pertaining to Freshman Chorus, Recital Attendance, Applied Music, Ensembles and Internships.

Current UMass Lowell students should be using their

**Restriction on off-campus study:**

Be advised that any course taken at another institution must be **formally approved** (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the **catalog policy** (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

*Last updated: 3/18/2022.*
MUAP.0010 Applied Music (Formerly 72.001) -
Credits: 0

MUAP.1000 Recital Attendance (Formerly 72.100) -
Credits: 0

Required attendance at scheduled Thursday Recital Hours and ten concerts/recital each semester from those listed on the Department of Music Performance Calendar. Seven semesters required of all music majors.

MUAP.1010 Applied Keyboard 1 (Formerly 72.101) -
Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.1020 Applied Keyboard 2 (Formerly 72.102) -
Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.1050 Applied Music Technology 1 - Credits: 2

Studio instruction in graduated sequence with music technology as the principal instrument. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.1060 Applied Music Technology 2 - Credits: 2

Studio instruction in graduated sequence with music technology as the principal instrument. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.1110 Applied Voice 1 (Formerly 72.111) -
Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.1120 Applied Voice 2 (Formerly 72.112) -
Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.1210 Applied Woodwinds 1 (Formerly 72.121) -
Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.1220 Applied Woodwinds 2 (Formerly 72.122) -
Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.1310 Applied Brass & Percussion 1 (Formerly 72.131) -
Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.
MUAP.1320 Applied Brass & Percussion 2 (Formerly 72.132) - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.1410 Applied Strings 1 (Formerly 72.141) - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.1420 Applied Strings 2 (Formerly 72.142) - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.1520 Performance Keyboard 1 (Formerly 72.152) - Credits: 3
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.1620 Performance Voice 1 (Formerly 72.162) - Credits: 3
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.1720 Performance Woodwinds 1 (Formerly 72.172) - Credits: 3
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.1820 Performance Brass & Percussion 1 (Formerly 72.182) - Credits: 3
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.1920 Performance Strings 1 (Formerly 72.192) - Credits: 3
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.2010 Applied Keyboard 3 (Formerly 72.201) - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.2020 Applied Keyboard 4 (Formerly 72.202) - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.
MUAP.2050 Applied Music Technology 3 - Credits: 2

Studio instruction in graduated sequence with music technology as the principal instrument. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.2060 Applied Music Technology 4 - Credits: 2

Studio instruction in graduated sequence with music technology as the principal instrument. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.2110 Applied Voice 3 (Formerly 72.211) - Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.2120 Applied Voice 4 (Formerly 72.212) - Credits: 2

Studio instruction in graduated sequence with voice as the principal instrument.

MUAP.2210 Applied Woodwinds 3 (Formerly 72.221) - Credits: 2

Studio instruction in graduated sequence with woodwind as the principal instrument.

MUAP.2220 Applied Woodwinds 4 (Formerly 72.222) - Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.2310 Applied Brass & Percussion 3 (Formerly 72.231) - Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.2320 Applied Brass & Percussion 4 (Formerly 72.232) - Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.2410 Applied Strings 3 (Formerly 72.241) - Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.2420 Applied Strings 4 (Formerly 72.242) - Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.
MUAP.2510 Performance Keyboard 2 (Formerly 72.251) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.2520 Performance Keyboard 3 (Formerly 72.252) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.2610 Performance Voice 2 (Formerly 72.261) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.2620 Performance Voice 3 (Formerly 72.262) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.2710 Performance Woodwinds 2 (Formerly 72.271) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.2720 Performance Woodwinds 3 (Formerly 72.272) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.2810 Performance Brass & Percussion 2 (Formerly 72.281) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.2820 Performance Brass & Percussion 3 (Formerly 72.282) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.2910 Performance Strings 2 (Formerly 72.291) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.2920 Performance Strings 3 (Formerly 72.292) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.
MUAP.3010 Applied Keyboard 5 (Formerly 72.301) - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.3020 Applied Keyboard 6 (Formerly 72.302) - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.3050 Applied Music Technology 5 - Credits: 2
Studio instruction in graduated sequence with music technology as the principal instrument. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.3060 Applied Music Technology 6 - Credits: 2
Studio instruction in graduated sequence with music technology as the principal instrument. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.3110 Applied Voice 5 (Formerly 72.311) - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.3120 Applied Voice 6 (Formerly 72.312) - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.3210 Applied Woodwinds 5 (Formerly 72.321) - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.3220 Applied Woodwinds 6 (Formerly 72.322) - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.3310 Applied Brass & Percussion 5 (Formerly 72.331) - Credits: 2
Studio instruction in graduated sequence with brass or percussion as the principal instrument.

MUAP.3320 Applied Brass & Percussion 6 (Formerly 72.332) - Credits: 2
Studio instruction in graduated sequence with brass or percussion as the principal instrument.

MUAP.3410 Applied Strings 5 (Formerly 72.341) - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.
performances.

MUAP.3420 Applied Strings 6 (Formerly 72.342) - Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.3510 Performance Keyboard 4 (Formerly 72.351) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.3520 Performance Keyboard 5 (Formerly 72.352) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.3610 Performance Voice 4 (Formerly 72.361) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.3620 Performance Voice 5 (Formerly 72.362) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.3710 Performance Woodwinds 4 (Formerly 72.371) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.3720 Performance Woodwinds 5 (Formerly 72.372) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.3810 Performance Brass & Percussion 4 (Formerly 72.381) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.3820 Performance Brass And Percussion 5 (Formerly 72.382) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.3910 Performance Strings 4 (Formerly 72.391) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.
instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.3920 Performance Strings 5 (Formerly 72.392) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.4010 Applied Keyboard 7 (Formerly 72.401) - Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.4020 Applied Keyboard 8 (Formerly 72.402) - Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.4050 Applied Music Technology 7 - Credits: 2

Studio instruction in graduated sequence with music technology as the principal instrument. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.4060 Applied Music Technology 8 - Credits: 2

Studio instruction in graduated sequence with music technology as the principal instrument. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.4110 Applied Voice 7 (Formerly 72.411) - Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.4120 Applied Voice 8 (Formerly 72.412) - Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.4210 Applied Woodwinds 7 (Formerly 72.421) - Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.4220 Applied Woodwinds 8 (Formerly 72.422) - Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.4310 Applied Brass And Percussion 7 (Formerly 72.431) - Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.4310 Applied Brass And Percussion 7 (Formerly 72.431) - Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.
will focus on technique and style building exercises and performances.

MUAP.4320 Applied Brass And Percussion 8 (Formerly 72.432) - Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.4410 Applied Strings 7 (Formerly 72.441) - Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.4420 Applied Strings 8 (Formerly 72.442) - Credits: 2

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.4510 Performance Keyboard 6 (Formerly 72.451) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.4520 Performance Keyboard 7 (Formerly 72.452) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.4610 Performance Voice 6 (Formerly 72.461) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.4620 Performance Voice 7 (Formerly 72.462) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.4710 Performance Woodwinds 6 (Formerly 72.471) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.4720 Performance Woodwinds 7 (Formerly 72.472) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUAP.4810 Performance Brass And Percussion 6 (Formerly 72.481) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.
setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

**MUAP.4820 Performance Brass And Percussion 7**
(Formerly 72.482) - Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

**MUAP.4910 Performance Strings 6 (Formerly 72.491)**
- Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

**MUAP.4920 Performance Strings 7 (Formerly 72.492)**
- Credits: 3

Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

**MUAP.4991 Senior Recital (Formerly 72.499)**
- Credits: 1

Public performance to be presented, registered concurrently with Applied Music 8 or Performance Applied Music 7.

**MUEN.0100 Ensemble 1 (Formerly 76.010)**
- Credits: 1

**MUEN.0200 Ensemble 2 (Formerly 76.020)**
- Credits: 2

**MUEN.1010 University Orchestra (Formerly 76.101)**
- Credits: 2

Open to all students by audition. Works from the orchestral repertoire are studied and publicly performed with additional opportunities for solo accompaniment.

**MUEN.1030 Wind Ensemble (Formerly 76.103)**
- Credits: 2

Open to all students by audition. Compositions are selected from a wide repertoire of wind ensemble literature for study and performance. Opportunity for solo performance with wind ensemble accompaniment.

**MUEN.1050 Concert Band (Formerly 76.105)**
- Credits: 2

Open to all students by audition. Selected band repertoire studied and performed.

**MUEN.1060 Marching Band (Formerly 76.106)**
- Credits: 2

Open to all students of the University, without regard for major field of study. The marching band performs at University events and at selected band festivals throughout New England. Custom musical arrangements and visual designs are featured. No audition required.

**MUEN.1080 Studio Orchestra (Formerly 76.108)**
- Credits: 2

Open to all students by audition. A wide spectrum of jazz orchestration and solo performance is studied and performed.

**MUEN.1220 Early Music Ensemble - Credits: 1**

The Early Music Ensemble provides the opportunity to explore the music of the Medieval, Renaissance, and Baroque Eras in ensembles of various sizes. Students may perform on any combination of their primary or secondary instruments. In cooperation with other members of the course, students will have the chance to tailor their repertoire choices to their own musicological interests and desired areas of growth. By Audition.

**MUEN.1240 Blues Ensemble - Credits: 1**

This ensemble course explores the wide array of blues and blues based musical traditions including their fundamental forms and grooves, as well as common riffs and melodic structures. Particular focus is given to creating compelling, spontaneous performances through the use of improvisation, body language, audience interaction/participation, effective phrasing, musical communications and cuing. Open to instrumentalists and vocalists of all types by audition.
MUEN.1260 Accompanying Ensemble - Credits: 1
Accompanying Ensemble focuses on developing collaborative skills among duos, trios, and quartets. Students will learn how to lead efficient rehearsals, explore interpretive possibilities, and increase aural sensitivity to other musicians. Weekly coachings for each group will be scheduled by the instructor. Open to all genres and instrument/voice combinations. By Audition.

MUEN.1280 R&B Ensemble - Credits: 1
This ensemble is open to both instrumentalists and vocalists and is designed to familiarize students with Rhythm and Blues material, from classic repertoire of the 1960’s through the present, while preparing for a concert at the end of the semester. Students are guided through the process of putting a working band together and rehearsing repertoire for performance, including attention to authentic stylistic approaches. By Audition.

MUEN.1470 Ensemble Performance 1 (Formerly 76.147) - Credits: 2
This ensemble provides students with an introduction to the skills, knowledge, and attitudes necessary for satisfactory ensemble performance, namely: adequate technical facility for successful ensemble participation; functional knowledge of musical grammar and syntax in reference to its application in ensemble performance; proper application of aural and rhythmic skills in an ensemble setting; music sensitivity in relation to ensemble performance; and a knowledge of the protocols of ensemble preparation and performance. Emphasis on utilization of major scales and chords through application in both classical and jazz styles.

MUEN.1480 Ensemble Performance 2 (Formerly 76.148) - Credits: 2
Ensemble Performance 2 is an introduction to the fundamentals of the jazz idiom, jazz theory, and jazz improvisation. Topics include correct interpretation of jazz rhythm and articulation, basic jazz theory, and the development of improvised melodies. Students will play in small ensembles, or "compos", in this course. Students are expected to have at least an intermediate level of skill on their instruments at the time they begin this course.

MUEN.1490 Ensemble Performance 3 (Formerly 76.149) - Credits: 2
Introduction to multiple styles of American popular music: more advanced harmony and rhythm; improvising on common chord progressions; semi-independent combos.

MUEN.1500 Ensemble Performance 4 (Formerly 76.150) - Credits: 2
Performing advanced jazz and pop compositions; advanced improvisation; semi-independent combos.

MUEN.1510 Brass Ensemble (Formerly 76.151) - Credits: 1
Open to all students by audition. Provides a wide range of performance experience through varied brass literature.

MUEN.1530 Percussion Ensemble (Formerly 76.153) - Credits: 1
Open to all students by audition. Exploration of the growing body of literature for percussion ensemble. Public performance.

MUEN.1540 Classical Guitar Ensemble (Formerly 76.154) - Credits: 1
MUEN.1560 Electric Guitar Ensemble (Formerly 76.156) - Credits: 1
Open to all students by audition. Provides study and performance of literature for guitar, lute, etc. Required of all guitar majors each semester.

MUEN.1580 Piano Ensemble (Formerly 76.158) - Credits: 1
Open to all students by audition. Provides performance experiences through varied piano ensemble literature for one and two pianos.

MUEN.1590 Mixed Chamber Ensemble (Formerly 76.159) - Credits: 1
Open to all students by audition. Offers a wide range of performance experience through a selection of literature for varying combinations of instruments.

MUEN.1600 String Ensembles (Formerly 76.160) - Credits: 1
Open to all students by audition. Provides experience in the performance of string orchestra literature.

MUEN.1610 Small Jazz Ensemble (Formerly 76.161) - Credits: 1
Open to all students by audition. Provides experience in the performance of jazz literature for groups ranging from four to eight members.

**MUEN.1620 Jazz Laboratory Ensemble (Formerly 76.162) - Credits: 1**
Open to all students by audition. Provides students with a clear understanding of the skills, knowledge and attitudes necessary to satisfactory ensemble performance and practical experience in the application of such skills, knowledge and attitudes.

**MUEN.1640 World Music Ensemble (Formerly 76.164) - Credits: 1**
An immersion into the music of non-western cultures, this course will provide instrumental and vocal instruction, as well as an introduction to the theory and cultural contexts that shape the practice of traditional music. The ensemble will meet weekly, with the goal of a public performance at the close of the semester.

**MUEN.1650 Jazz/Rock Big Band (Formerly 76.165) - Credits: 1**
Open to all students by audition. Fusion big band covering a wide variety of contemporary jazz rock literature. Solo improvisational opportunities. Numerous performances.

**MUEN.1700 Contemporary Electronic Ensemble (Formerly 76.170) - Credits: 1**
Explores the electronic production and manipulation of music in a live ensemble setting. Students will incorporate synthesis, signal processing, sampling, etc. into a musical framework. Beside performing from the constantly expanding repertoire of electronic music, students will be encouraged to create original compositions and arrangements for the ensemble. A public performance will be given at the end of each semester.

**MUEN.1711 Diverse Practices Ensemble - Credits: 1**
This ensemble will feature variable topics focusing on musical practices that fall outside of typical Western-music traditions. Possibilities include contemporary concert music, improvisation, early music, electronic dance music, performances for music therapy, and many more. The ensemble is open to all students based on audition.

**MUEN.1721 Secondary Instrument Ensemble - Credits: 1**
This ensemble will offer students the opportunity to explore and develop their abilities on a secondary instrument. Topics for section include percussion for non-percussionists, piano for non-pianists, and guitar for non-guitarists. Open to all students based on permission of instructor.

**MUEN.1750 Video Game Ensemble - Credits: 1**
This ensemble will perform live music based on video games. Potential projects may include: 1) performing student arrangements of game soundtracks for ensemble members (acoustic or electroacoustic). 2) Using in-game mechanics to develop a live performance. 3) Developing actual games to feature original sound and music. Live performance in semester-end concert required for all participants. Open to all vocalists and instrumentalists by permission only.

**MUEN.2010 Chamber Singers (Formerly 76.201) - Credits: 2**
A small, select choir open to all singers by audition. Performs music ranging from the present day to the Middle Ages.

**MUEN.2020 University Choir (Formerly 76.202) - Credits: 2**
Open to all students by audition. Includes the study and performance of a wide variety of choral compositions.

**MUEN.2100 Opera Workshop (Formerly 76.210/510) - Credits: 1**
**MUEN.2510 Choral Union (Formerly 76.251) - Credits: 1**
A large chorus open to the campus and the community without audition. Performs larger works in the choral repertoire including oratorios, masses, motets and opera.

**MUEN.3450 Songwriting Ensemble - Credits: 1**
This course is designed to facilitate a greater range of creative expression for aspiring songwriters by analyzing the musical and lyric components of a song composition, posing songwriting problems to be solved, and developing an identifiable musical style.

**MUPF.1010 Performance Applied 1 - Credits: 2**
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.
MUPF.1020 Performance Applied 2 - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUPF.1320 Introduction To Keyboard 2 (Formerly 75.132) (Last offered Spring 2012) - Credits: 1
A study of more advanced chord progressions, ensemble keyboard playing, patriotic songs, more advanced accompaniment patterns and advanced solo literature and a continuation of the use of improvisational techniques.

MUPF.2000 Mechanics of Movement for Instrumentalists - Credits: 2
Critical study of motion and posture techniques for optimal performance. Topics include Alexander technique, Feldenkrais Method and Mensendieck System. Adjunct approaches for relaxation and recovery will also be explored, including massage, Rolfing, yoga, and tai chi.

MUPF.2001 Language and Diction - Credits: 2
This course teaches the basics of diction and the International Phonetic Alphabet, as utilized by professional singers. These principles are specifically applied to English, French, Italian and German.

MUPF.2010 Performance Applied 3 - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUPF.2020 Performance Applied 4 - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUPF.2110 Health, Wellness, and the Art of Practice -
consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUPF.3410 Creative Performance 1: Preparation - Credits: 2
Experiential learning environment for the assimilation and practice of performance skills, utilizing “collaborative masterclass” model. Course culminates with a mid-length, shared recital of approximately 15 minutes in duration per student. Various topics and application to performance setting and context will be discussed each semester.

MUPF.3420 Creative Performance 2: Introductory Recital - Credits: 2
Experiential learning environment for the assimilation and practice of performance skills, utilizing “collaborative Masterclass” model. Course culminates with the completion of a junior recital of approximately 30-45 minutes in duration. Various topics and application to performance setting and context will be discussed.

MUPF.3460 Improvisation - Credits: 2
Study of improvisation techniques as applied to a diverse array of stylistic practice and historical periods.

MUPF.3610 Jazz Improvisation 1 (Formerly 75.361) - Credits: 3
A study of basic jazz structures, motives, chord progressions, scales, melodic analysis, use of some approach techniques, tensions and their application to improvisation. Includes in class performance by small instrumental and/or vocal groups.

MUPF.3620 Jazz Improvisation 2 (Formerly 75.362) - Credits: 3
A continuation of 75.361. Will emphasize the study and performance of more advanced levels of improvisation.

MUPF.3810 The Musician’s Toolbox - Credits: 2
This course builds the collection of promotional tools a performing musician needs to secure work in the field (such as biography, photos, audio samples, business cards, etc.), creates a means of dissemination (website), and discusses applications for use. Additionally, strong emphasis is placed upon location, evaluation and effective use of various resources needed to support success in an entrepreneurial music career.

MUPF.3820 Marketing & Media for Performing Musicians - Credits: 2
Addresses modern media strategies utilized by performing musicians to promote music and career interests. Students will design and build a promotional website, craft a professional presence on social media, and learn techniques to advance career. Responsible online conduct is discussed and emphasized, and forward-looking online business models are analyzed.

MUPF.3850 Recording for Performers - Credits: 2
This course addresses techniques and concepts utilized in creating a professional recording, cost-effective solutions for production, and various concerns surrounding sonic media. Course culminates with a high-quality recording of student material.

MUPF.3940 Performance Seminar I (Formerly 75.394) - Credits: 3
The study and performance of selected works from the repertoire of each of the five primary areas of performance; keyboard, voice, woodwinds, strings, and brass/percussion. Emphasis will be placed on student and faculty performance, leading to detailed consideration of the relationship between the demands of the composer and the problems of the performer and the manner in which these concerns influence the musical and artistic judgments necessary to achieve a quality performance.

MUPF.4010 Performance Applied 7 - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUPF.4020 Performance Applied 8 - Credits: 2
Studio instruction in graduated sequence. Applied Lessons consist of private instrumental, vocal, compositional, or technological lessons plus additional instruction in a group setting. Specific materials will be assigned by applied and group instructors based on student needs and abilities. Instruction will focus on technique and style building exercises and performances.

MUPF.4110 Teaching Artistry - Credits: 2
Most performers supplement their incomes by teaching. This course explores the qualities, considerations and skills necessary for students to become excellent educators, and examines various instructional settings emerging professional musicians are likely to experience.

MUPF.4410 Performance Artistry 1: Preparation -
Credits: 2
Experiential learning environment for the assimilation and practice of performance skills. Course culminates with a mid-length, shared recital of approximately 15-30 minutes in duration. Various topics and application to performance setting and context will be discussed each semester.

MUPF.4420 Performance Artistry 2: Capstone Recital
- Credits: 2
Experiential Learning environment for the assimilation and practice of performance skills, utilizing "collaborative masterclass" model. Course culminates with a full-length, high-quality senior recital of approximately 60 minutes in duration. Various topics and application to performance setting and context will be discussed throughout the semester.

MUPF.4740 Practical Intonation (Formerly 75.474) -
Credits: 3
The study of orchestral and band instruments relative to intonation. The development of conceptual awareness relative to the various characteristics of pitch, which are inherent in the design of the various instruments. Identification of problematic intonation and procedures to alleviate problems through performance.

MUPF.4930 Performance Seminar 1 (Formerly 75.493) - Credits: 3
The study and performance of selected works from the repertoire of each of the five primary areas of performance; keyboard, voice, woodwinds, strings, and brass/percussion. Emphasis will be placed on student and faculty performance, leading to detailed consideration of the relationship between the demands of the mposer and the problems of the performer and the manner in which these concerns influence the musical and artistic judgments necessary to achieve a quality performance.

MUPF.4940 Performance Seminar 2 (Formerly 75.494) - Credits: 3
Designed as a "master class" experience for students in each of the five primary areas of performance, keyboard, voice, woodwinds, strings, and brass/percussion, with a separate section for each area wherever possible. Class sessions will consist of student performance of selected literature followed by critical analysis from faculty and peers. Each section will be supervised by the appropriate area coordinator and will also involve invited guest performers selected from faculty, applied faculty and other noted artists.

MUPF.4950 Directed Study: Research In Performance
(Formerly 75.495) - Credits: 1-3
Permission of chairperson required.
Sample Degree Pathway for Music Studies - Voice Option

For students who entered prior to fall 2015.

Total Minimum Credits = 131-133.

1Music Studies students meet the Quantitative Literacy Essential Learning outcome outside the major. See the complete list of approved QL courses

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum policy for further details. You should meet with your faculty adviser to determine how you will meet the Core Curriculum requirements.

- Department Specific Policies
  Please see advisor or contact the Music Department for more specific requirements pertaining to Freshman Chorus, Recital Attendance, Applied Music, Ensembles and Internships.

Current UMass Lowell students should be using their Advisement Report in SiS. If you need assistance, please contact your adviser.

Restriction on off-campus study:
Be advised that any course taken at another institution must be formally approved prior to enrollment. See the catalog policy for details.

1Music Studies students meet the Quantitative Literacy Essential Learning outcome outside the major. See the complete list of approved QL courses (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf).

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be
taken in any sequence. Refer to the Core Curriculum policy for further details. You should meet with your faculty adviser to determine how you will meet the Core Curriculum requirements.

Please see advisor or Music Office for more specific requirements pertaining to Freshman Chorus, Recital Attendance, Applied Music, Ensembles and Internships.

Current UMass Lowell students should be using their Advisement Report in ‪‪‪SiS‬(https://www.uml.edu/Enrollment/SiS/default.aspx). If you need assistance, please contact your adviser.

**Restriction on off-campus study:**

Be advised that any course taken at another institution must be formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the catalog policy (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

_Last updated: 3/17/2022._
MUED.1000 Observation Lab I (Formerly 73.100) - Credits: 0
All students who are registered for 73.151 Introduction to Music Education are required to sign up for Observation lab 1 and complete 15 hours of school observations outlined by course Instructor.

MUED.1410 Introduction To Brass Pedagogy 1
(Formerly 73.141/501) - Credits: 1
Intensive class instruction toward the development of basic performance proficiency on brass instruments and the development of pedagogical skills and techniques for beginning instruction and demonstration purposes.

MUED.1420 Introduction to Brass Pedagogy 2
(Formerly 73.142) - Credits: 1
A continuation of 73.141. Intensive class instruction toward the development of basic performance proficiency on brass instruments and the development of pedagogical skills and techniques for beginning instruction and demonstration purposes.

MUED.1440 Introduction to Woodwind Pedagogy 1
(Formerly 73.144/504) - Credits: 1
Intensive class instruction toward the development of basic performance proficiency on woodwind instruments and the development of pedagogical skills and techniques for beginning instruction and demonstration purposes.

MUED.1450 Introduction to Woodwind Pedagogy 2
(Formerly 73.145/505) - Credits: 1
A continuation of 73.144. Intensive class instruction toward the development of basic performance proficiency on woodwind instruments and the development of pedagogical skills and techniques for beginning instruction and demonstration purposes.

MUED.1510 Introduction To Music Education
(Formerly 73.151) - Credits: 2
Designed to provide the student with an overview of the principles and practices of music education in today’s public schools. Students will observe regular classrooms and music instruction at all levels of N-12 education. This course is a prerequisite for all professional education courses in music education and includes the component of required pre-practicum fieldwork.

MUED.1620 Introduction to Percussion Pedagogy
(Formerly 73.162/5060) - Credits: 1
Intensive class instruction toward the development of basic performance proficiency on percussion instruments and the development of pedagogical skills and techniques for beginning instruction and demonstration purposes.

MUED.2000 Observation Lab 2 (Formerly 73.200) - Credits: 0
All students who are registered for 73.410 Globas Music for the Classroom are required to sign up for Observation Lab 2 and complete 20 hours of school observations outlined by course instructor.

MUED.2120 Special Topics (Formerly 73.212) - Credits: 3
Special Topics: A variety of topical issues in music will be explored through an interdisciplinary lens, which will vary from semester to semester. This music elective may include analysis and discussions of musical structure and form, culture and its influence on musical genres, gender in music, as well as identity and inclusion, depending on faculty and student interest.

MUED.2410 Introduction to Strings Pedagogy 1
(Formerly 73.241/507) - Credits: 1
Intensive class instruction toward the development of basic performance proficiency on string instruments and the development of pedagogical skills and techniques for beginning instruction and demonstration purposes.

MUED.2420 Introduction to String Pedagogy 2
(Formerly 73.242/508) - Credits: 1
Intensive class instruction toward the development of basic performance proficiency on string instruments and the development of pedagogical skills and techniques for beginning instruction and demonstration purposes.

MUED.2440 Introduction to Voice Pedagogy 1
(Formerly 73.244/516) - Credits: 1
Intended to cultivate the fundamental principles of singing. The psychology of singing and the psychology of the singing voice are considered as they apply to tone production and resonance.

MUED.2450 Introduction to Voice Pedagogy 2
(Formerly 73.245/517) - Credits: 1
A continuation of Voice Pedagogy 1. Intended to cultivate the fundamental principles of singing. The psychology of singing and the psychology of the singing voice are considered as they apply to tone production and resonance.

MUED.2470 Introduction to Practical Accompanying (Formerly 73.247) - Credits: 1

This course develops students practical skills in leading and accompanying solo, small and large group performances. Students will accompany their own singing and the singing and performing of others using the piano, guitar, hand percussion, and an original computer arrangement. Original arrangement analysis and production projects will be integrated throughout the semester including realizing lead sheets from sheet music and recordings, performing basic comping, rhythmic, and strumming patterns, and arranging, sequencing and producing accompaniments via computer software. This course culminates in a school or community service-learning performance leading and accompanying youth in singing.

MUED.2490 Progressive Performance and Production Pedagogy (Formerly 73.249) - Credits: 1

This course introduces student to pedagogical approaches supporting music performance and production in progressive music experiences in school and community music settings. Students will develop basic performance technique on common progressive performance instruments such as electric guitar and bass, drum set, and keyboard. Students will also develop basic proficiency in live sound reinforcement, including setting up a PA, vocal microphone techniques, and live mixing and balancing. Students will work in small peer groups designing and facilitating small group performance experiences, including songwriting, analysis, arranging and covering music for acoustic and electronic instruments. Students will have experiences facilitating individual and small group instruction with their peers.

MUED.3000 Observation Lab 3 (Formerly 73.300) - Credits: 0

Pre-Practicum Field and Service learning teaching experiences tied to General Music Methods 1. Students observe and teach in partnership schools under the mentorship of Lowell music teachers and course instructor.

MUED.3010 Technology in Music Education (Formerly 73.301) - Credits: 3

Introduction to the role of computers and technology in music education programs. Course includes the development of computer literacy, including knowledge of word processing, database and spreadsheet applications as essential to educators, and explores MIDI, the Internet, music software, recording, multimedia and other technologies as educational tools.

MUED.3940 Choral Repertoire and Rehearsal Techniques (Formerly 73.394) - Credits: 3

Examination of appropriate choral repertoire for the secondary school level and effective choral rehearsal techniques. Covers auditioning, warmups, choral tone, diction, score preparation, and development of fundamental musicianship skills necessary for a successful choral ensemble. Serves as a choral laboratory setting for the practice of score preparation and rehearsal techniques.

MUED.4000 Observation Lab 4 (Formerly 73.400) - Credits: 0

All students who are registered to 73.430 General Music Methods 2 are required to sign up for Observation Lab 4 and complete 20 hours of school observations outlined by course Instructor.

MUED.4100 Global Music for Classroom (Formerly 73.410/500) - Credits: 3

Focus on the music education profession's response to multiculturalism in education as evidenced through the National Music Standards and an examination of resources and methodologies for teaching and understanding the music of diverse cultures, styles, and genres. As one of the core professional music education courses, the course includes the component of pre-practicum fieldwork. There will be an additional research project for Graduate Students enrolled in 73.500.

MUED.4200 General Music Methods 1 (Formerly 73.420/544) - Credits: 3

A course designed to present the basic fundamentals of general music pedagogy, including lesson planning and the writing of instructional objectives. The course discusses basic principles of curriculum and instruction, assessment, learning styles, and developmental psychology. These are related to state curriculum frameworks and National Music Standards 1-5. As one of the core professional music education courses, the course includes the component of pre-practicum fieldwork in selected settings.

MUED.4300 General Music Methods 2 (Formerly 73.430/545) - Credits: 3

Investigation of some of the most popular methods of teaching general music, including Orff, Kodaly, Dalcroze, and comprehensive musicianship. Discussion of contemporary
issues including music in special education, multicultural music education, and National Music Standards 6-9. As one of the core professional music education courses, the course includes the component of fieldwork in selected settings.

MUED.4920 Instrumental Repertoire and Rehearsal Techniques (Formerly 73.492/542) - Credits: 3

Examination of appropriate instrumental repertoire for the secondary level and effective instrumental rehearsal techniques. Includes study of rehearsal planning, score preparation, and the development of fundamental musicianship skills necessary for a successful instrumental ensemble.

MUED.4930 Instrumental Ensemble Lab (Formerly 73.493) - Credits: 1

Designed to supplement the experiences of the instrumental methods courses. Students gain experience performing on secondary instruments, planning lessons for beginning and intermediate level instrumental ensembles, and conducting in these settings.

MUED.4940 Choral Ensemble Lab (Formerly 73.494) - Credits: 1

Designed to supplement the experiences of the choral and vocal methods courses. Students gain experience by planning lessons for elementary and secondary school level vocal ensembles and conducting in these settings.

MUED.4960 Directed Study: Music Education (Formerly 73.496) - Credits: 3

Individual work under the supervision of a member of the music education faculty on a specific topic approved by the instructor and the music education faculty. Permission of Coordinator of Music Education required.
College of Fine Arts, Humanities & Social Sciences

Degree Pathways are a sample semester-by-semester sequence of courses which might be followed for successful completion of a degree, diploma, credential or certificate from the university. Students should follow the degree pathway appropriate to their catalog year. A student's catalog year is typically defined by the date of their entry into the University of Massachusetts Lowell.

American Studies

- General Option
  fall 2015 and beyond
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

Total Minimum Credits = 120

1World Ready Language Track (WR track) requires successful completion of a two course sequence in a World Language (depending on placement) and three approved courses on the culture/history/literature/film related to that language, but taught in English. (Total of 15 credits.) For detailed information refer to Policies - Language Requirements (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) in the undergraduate catalog.

2PCST.5530 (https://www.uml.edu/catalog/courses/PCST/5530) if doing Bachelors to Masters.

3PCS majors meet the Diversity and Cultural Awareness (DCA) ELO through an approved PCS Area B or elective course:

- GNDR.2400 (https://www.uml.edu/catalog/courses/GNDR/2400) Intro to Gender Studies
- PHIL.2960 (https://www.uml.edu/catalog/courses/PHIL/2960) Intro to World Religions
- POLI.1120 (https://www.uml.edu/catalog/courses/POLI/1120) Intro to Comparative Political Systems
- POLI.1210 (https://www.uml.edu/catalog/courses/POLI/1210) Intro to International Relations

4PCS majors meet the Information Literacy (IL) ELO with an approved course outside the major requirements.

5Students must see their advisement report in SIS (https://www.uml.edu/Enrollment/SiS/default.aspx) for a list of approved PCS electives.

A major in Peace and Conflict Studies consists of 36 to 45 credits with at least 18 credits at the 3000 level or above (includes required and elective courses).

Students must take at least 1 course in each of the three areas (Area A: Foundations of Peace &Conflict, Area B: Approaches to Peace &Conflict, and Area C: Regions of Peace &Conflict).

Notes:

- A statistics course is highly recommended.

- At least 75 credits must be earned outside of the major including general education requirements, language requirement, and free electives. Elective courses that are used to fulfill Peace and Conflict Studies major requirements cannot also be applied to satisfy a students general education requirements.

Students transferring to the college and wishing to major in Peace and Conflict Studies must make individual arrangements with the program director regarding satisfaction of major course requirements.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) policy for further details. You should meet with your faculty advisor to determine how you will meet the Core Curriculum requirements.

Current UMass Lowell students should use their Advisement Report in SIS (https://www.uml.edu/Enrollment/SiS/default.aspx). If you need assistance, please contact your advisor.

Restriction on off-campus study:

Be advised that any course taken at another institution must be formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the catalog policy (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

Last updated: 2/19/2021
PCST.1250 Introduction to Peace and Conflict Studies (Formerly PCS 125) - Credits: 3
This course will focus on the causes of conflict, conflict resolution methods, and ways to sustain peace. The course will explain and define each of those areas. A mid-term will be administered to examine the students’ grasp of the concepts and key terminology. The second part of the class will emphasize student participation and the application of concepts learned earlier in class. The final is a take home exam that will require the application of theory and praxis in the field of Peace and Conflict Studies.

PCST.2010 Research Methods in Peace and Conflict Studies - Credits: 3
To introduce students to the different approaches to research (qualitative and quantitative) in Peace and Conflict Studies and to help students differentiate between theory testing and theory building, and to provide a general framework for research design.

PCST.4200 Gender, Work and Peace (Formerly PCS 420) - Credits: 3
"Gender, Work and Peace" will explore the relationship between human rights, gender and nonviolence in the 21st century. We will examine how current and future reality can be shaped by related policies, specifically those on the micro and macro level concerned with gender. Today we live in a period of global transition comparable to the period that followed the Industrial Revolution. It presents us with enormous challenges and opportunities regarding factors we will address in class: economic globalization, government restructuring, work-family balancing, environmental safety at work, gender inequalities and the connection between human rights and dignity at work.

PCST.4530 Integrative Seminar in Peace and Conflict Studies (Formerly PCS 453/553) - Credits: 3
The purpose of the integrative seminar is to assist students in developing a robust and mature understanding of the three PCS core questions as they relate to PCS coursework. With a strong evidence focus, students identify patterns, principles, questions, and dilemmas relevant to the core questions emerge from multiple courses they have taken within the PCS program. Students develop a reflective journal, a series of essays, a portfolio of their accumulated work, and a culminating portfolio presentation. Meets Core Curriculum Essential Learning Outcome for Applied &Integrative Learning (AIL) and Written &Oral Communication (WOC).

PCST.4550 Mediation: Theory and Practice (Formerly PCS 455/555) - Credits: 3
Mediation is a form of dispute resolution in which a neutral person helps two or more parties discuss their conflict, explore wants and needs, generate options, and reach an agreement. Mediation has become more prevalent over the past few decades in the courts, community-setting, and schools because it empowers the disputing parties to reach a resolution that works for them. This course introduces mediation in the context of other forms of alternative dispute resolution, teaches the principles and theory behind mediation, and trains students in the fundamentals of the mediation process. Interactive exercises and mediation role-plays will be used to provide experiential practice. Upon completion of the course, students will be connected to opportunities to practice mediation in the local courts or with community organizations.

PCST.4580 Peace and Conflict Field Experience (Formerly PCS 458/558) - Credits: 3
A program of practical experience in the field of Peace and Conflict. Students can work in a variety of areas related to Peace and Conflict Studies. Students meet regularly as a class on campus with the designated instructor to discuss their experiences and to learn more about the settings in which they practice and the challenges that they confront.

PCST.4730 Seminar in Peace and Conflict Studies (Formerly PCS 473/502) - Credits: 3
Offered from time to time to highlight specialized areas of faculty interest and to acquaint the student with new developments from a broad range of theory and research and how these developments might affect the field of Peace and Conflict Studies.

PCST.4750 Community Conflict Resolution (Formerly 57.475) - Credits: 3
This course gives students an understanding of the main issues and solutions involved in community level conflict resolution; e.g., in neighborhoods, workplaces, and other institutions. It develops students’ skills in practicing conflict resolution and/or evaluating programs in the field of dispute resolution. It is important to understand why conflict happens and how to resolve conflict.

PCST.4910 Directed Study (Formerly PCS 491) - Credits: 1-3
Through frequent consultation with the instructor, the student carries out the investigation of a particularly specialized area of interest. This course may be repeated for up to a total of 9 credits.
PCST.4960 Practicum in Peace and Conflict Studies
(Formerly PCS 496) - Credits: 1-3

Specific requirements vary, but the Practicum experience enables Junior and Senior level students to work and study in a variety of areas related to Peace and Conflict Studies. Students meet regularly as a class on campus with the designated instructor to discuss their experiences and to learn more about the settings in which they practice and the challenges that they confront. Practicum may be repeated for a maximum of nine credits.
College of Fine Arts, Humanities & Social Sciences

Degree Pathways are a sample semester-by-semester sequence of courses which might be followed for successful completion of a degree, diploma, credential or certificate from the university. Students should follow the degree pathway appropriate to their catalog year. A student's catalog year is typically defined by the date of their entry into the University of Massachusetts Lowell.

PHIL.2010 Introduction to Philosophy (Formerly 45.201) - Credits: 3
Examines some of the typical approaches to philosophical questioning and the issues raised in such inquiry: what is true knowledge, what is reality, what is the good, what is the right political order, what is the nature of religious faith? Meets Core Curriculum Essential Learning Outcome for Critical Thinking & Problem Solving (CTPS).

PHIL.2020 Introduction to Logic and Critical Reasoning (Formerly 45.202) - Credits: 3
Studies the methods used to distinguish correct from incorrect reasoning. This course will aim at developing (1) an ability to express one's ideas clearly and concisely; (2) an increased skill in defining one's terms; and (3) a capacity to formulate arguments vigorously and to scrutinize them critically. Meets Core Curriculum Essential Learning Outcome for Critical Thinking & Problem Solving (CTPS) and Quantitative Literacy (QL).

PHIL.2030 Introduction to Ethics (Formerly 45.203) - Credits: 3
Examines the basic issues and problems of ethics and values and a survey of some important alternative answers to the questions raised, on both an individual and a social level, by our necessity to act and to live in a rational and human way. Meets Core Curriculum Essential Learning Outcome for Social Responsibility & Ethics (SRE).

PHIL.2060 Introduction to Political Philosophy (Formerly 45.206) - Credits: 3
Political philosophy is concerned with basic questions about community, public life, and social organization. This course will address issues such as the rights of the individual in relation to the power of the state and society; the nature and legitimacy of political authority and democracy; the significance of power, economics, justice and equality in social life; and the duties and responsibilities of citizens. We will also consider the philosophical meaning of communitarianism, liberalism, and republicanism, individualism, capitalism, and socialism, as well as the role of class, race, and gender in politics.

PHIL.2080 Introduction to Philosophy of Science - Credits: 3
This course is designed to introduce students to fundamental questions in philosophy of science. We will cover both descriptive issues such as how scientific theories become “facts,” and normative questions that ask how we ought to structure scientific inquiry. We will cover a range of scientific disciplines including physics, chemistry, biology, geology, and even paleontology. We’ll also cover disciplines that are more or less controversial as “sciences,” such as economics, mathematics, medicine, and engineering.

PHIL.2200 Philosophy and Christianity (Formerly 45.220) - Credits: 3

PHIL.2250 Introduction to Islam - Credits: 3
The goal of this course is to provide a basic understanding of Islam, the religion of some one-fifth of humankind, in its theological, historical, political, social and human dimensions. The course provides a general introduction to Islam, including the historical dimension, the theological, and the social/political. We will also address issues regarding the relevance of Islam to contemporary political events.

PHIL.2960 Introduction to World Religions (Formerly 45.296) - Credits: 3
A study of religious knowledge and the phenomena of religion from a philosophical standpoint. The course considers explanations for religious behavior, some central issues in religious belief, and the values and goals of religious systems. Various world religions provide specific data for these topics.

PHIL.3010 Ways of Knowing (Formerly 45.301) - Credits: 3
Studies and analyzes various forms and expressions of human knowledge (perception, concept-formation and symbolic functioning, myth, aesthetic creation and interpretation, scientific discovery and understanding) and the individual, social, and historical conditions to which they are subject. The goal of the course is a comprehensive view of the structure of the human mind and its operations.

PHIL.3040 God and Philosophy (Formerly 45.304) - Credits: 3
Studies, historically and systematically, the following topics: a) the origin and content of the idea of God, b) the possibility of affirming God, philosophically and religiously, c) the complex nature of religious language and imagery, and d) God’s relation to the world, history, and the individual.

PHIL.3050 Language Signs and Symbols (Formerly 45.305) - Credits: 3
An examination of the various grammars of human expressions from the point of view of a general theory of signs. Among the topics to be treated are: a) the nature of signs, symbols, and
meaning; b) the structures and functions of language; c) the relations between language, thought, and reality, especially as manifested in metaphor; d) the social dimensions of signification and symbolization; and e) the relations between the different linguistic, sign, and symbol systems.

PHIL.3060 Feminist Theory Politics (Formerly 45.306) - Credits: 3

What is sexist oppression? Is our culture still sexist, or is the need for feminism over? How should we respond to sexism in other cultures? Do men and women have different natures? Are our culture’s sexual representations of women necessarily degrading, and if so, why? We’ll consider these questions, and others, by examining the arguments and methodology of analytic feminism. We’ll start by tracing the historical development of feminism in the 18th, 19th, and 20th centuries, and then turn to several contemporary feminist analyses of sexist oppression. We’ll then use these feminist frameworks to examine more specific issues. Possible topics include: feminist analyses of sexual objectification in pornography, feminist arguments in ethics and social theory, feminist analyses of science, and feminist criticisms of gendered labour. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

PHIL.3080 Philosophy of Race and Gender (Formerly 45.308) - Credits: 3

This course will focus on issues of identity and difference. We will discuss the ways in which group identities are formed and break down. We will discuss how differences are constituted and reconstituted. These issues are central to theories of race and gender, racism and sexism. Some of the questions which we will raise are these: What motivates forming group identities? How are they formed? How is identity used within oppressive social structures? How can it be used to transform society? Why do some differences make a difference and others don’t? Can we choose our group identities? Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

PHIL.3100 Philosophy of Creative Imagination (Formerly 45.310) - Credits: 3

Focuses first on imagination as a function of mind, placing it in relation to other functions such as perception, emotion, and conceptualization. Attention is then given to the difference between the reproductive and the creative imagination, with special emphasis on the psychological and social/political dimensions of creativity. Topics to be considered include poetical metaphor, theatrical performance, painting, architecture, or photography.

PHIL.3101 Philosophy of Humor and Comedy -

Credits: 3

This course examines the phenomenon of humor, laughter, and comedy, inquiring into its nature and function in human life. We explore the leading theories of humor, in attempting to explain what makes something "funny" and why we enjoy humor so much. We also attempt to relate the idea of humor to the related ideas of laughter and comedy. The course will include analysis of the various forms of humor, including the joke, the dramatic comedy, and stand-up comedy.

PHIL.3105 Philosophy of Disability - Credits: 3

Examines the basic issues and problems in the philosophical study of disability, including engagement with the interdisciplinary field of disability studies. Provides a survey of issues relating to the lived experience of disability, disability and well-being, theories of disability, and the concepts of normality, fitness and ableism as they relate to the practice and institutions of medicine, politics, religion, and society more generally.

PHIL.3106 Public Health Ethics - Credits: 3

In this course we examine contemporary issues in public health ethics. Utilizing historical and recent cases we unpack the core conceptual issues and emerging trends in bioethics. In doing so, we’ll discuss issues such as quarantine, surveillance, isolation, behavioral interventions, and criminalization of health. We discuss the ethical and public health implications of nutrition, vaccinations, occupational health, pandemics, and bioterrorism, among many other cases.

PHIL.3107 Animal Ethics - Credits: 3

This course examines the moral status and ethical treatment of non-human animals.

PHIL.3110 Philosophy and Literature (Formerly 45.311) - Credits: 3

This course examines the intersection between philosophy and literature. Course content includes detailed study of philosophical works of literature and works of philosophy about Literature. Featured Topics include competing definitions of Literature, silent and performative reading, models for acquiring literary status, Literature and morality, censorship, the role of truth in literary experience, and the relationship between authors, works, fictional characters, readers, and critics.

PHIL.3130 American Philosophy (Formerly 45.313) - Credits: 3

American philosophy provides a historical approach to
American intellectual history from 1830 to the present. American Transcendentalism and Pragmatism will be the two focal points in the course and students will be acquainted with authors such as Ralph Waldo Emerson, Margaret Fuller, Henry David Thoreau, C.S. Peirce, William James, Jane Addams and John Dewey. The ideas of freedom, self-reliance, community, and moral life are the abiding threads in this tradition and will be explored in the course of the term.

PHIL.3140 Philosophy of the Gothic Imagination (Formerly 45.314) - Credits: 3

A philosophical inquiry into science fiction, fantasy, and horror, with special emphasis on film. This course will attempt to provide interpretations of some classic examples from these genres, as well as to inquire into the philosophical significance of these literary categories and their relation to mythology and religion. Questions to be addressed will include the problem of knowledge and rationality and its limits, the nature of the human being, and the moral problem of the role of violence in the social order. The class will attempt to identify a continuous tradition between these modern genres and ancient Greek tragedy and mythology.

PHIL.3141 Dante’s Way from Fear to Peace - Credits: 3

The course will involve close reading of central cantos from all three books of Dante’s Divine Comedy, the Inferno, Purgatorio, and Paradiso. Through we will consider Dante’s place in the history of European literature, in particular, his relationship to Virgil and the epic tradition, our primary focus will be on three philosophical concerns, existential/ethical, metaphysical/ontological, and epistemological/Linguistic.

PHIL.3150 Philosophical Topics (Formerly 45.315) - Credits: 3

A close study of some of the great texts of philosophical literature. In general, one or two major works are selected and subjected to a thorough reading.

PHIL.3160 Philosophy and Film (Formerly 45.316) - Credits: 3

This course examines the political and philosophical values and ideas which constitute cinema. It analyzes film as an historical, cultural, commercial, and artistic endeavor. Students will develop the skills to watch film actively and critically.

PHIL.3210 Theories of Ethics (Formerly 45.321) - Credits: 3

This course examines theories of Philosophical ethics. Possible topics include metaethics (which asks questions such as "What do we mean when we call things 'right' or 'wrong'?", "Are there universal ethical truths or is morality fundamentally relative?", and "What is the relationship between morality and religion?"); normative ethics (which asks whether the right thing to do is determined by considerations such as rights, duties, intentions, consequences, character, or something else) and applied ethics (which applies normative ethical theories to particular concrete problems).

PHIL.3230 PhilosophyClassics: Nietzsche (Formerly 45.323) - Credits: 3

A detailed introduction to Nietzsche’s thought and its reception. This course will examine Nietzsche’s most important works and central concepts such as the Dionysian and Apollonian, the last man, overman, eternal recurrence, genealogy, and will to power.

PHIL.3270 Environmental Philosophy (Formerly 45.327) - Credits: 3

An examination of the philosophical foundations of environmentalism. Addresses both the question of ethical duties we owe to animals and to nature, and also the question of man’s relation to the natural world.

PHIL.3300 Philosophy of Symbolic Logic (Formerly 45.330) - Credits: 3

The first half of this course examines various axiomatic systems, and the student develops both intrasystematic and metasyntactical techniques of proof. During the second half of the course, attention is given to certain important philosophical problems which arise from reflection on logical systems, e.g., the cognitive processes of abstraction and instantiation, the general notion of form, and questions of consistency and interpretation.

PHIL.3310 Philosophy of the Mind (Formerly 45.331) - Credits: 3

The status of consciousness is the central concern of a philosophy of mind. The course takes as its point of departure a reflection upon the nature and significance of consciousness from the perspective of its advocates (Husserl, Sartre) and its adversaries (Ryle, Skinner). The results of this preliminary inquiry is to provide a foundation for the exploration of other issues: the possibility of an unconscious; the temptation of bad faith; the dynamics of concept formation; and the nature of emotion, imagination, and dreams.

PHIL.3340 Engineering and Ethics (Formerly 45.334) - Credits: 3

The status of consciousness is the central concern of a philosophy of mind. The course takes as its point of departure a reflection upon the nature and significance of consciousness from the perspective of its advocates (Husserl, Sartre) and its adversaries (Ryle, Skinner). The results of this preliminary inquiry is to provide a foundation for the exploration of other issues: the possibility of an unconscious; the temptation of bad faith; the dynamics of concept formation; and the nature of emotion, imagination, and dreams.
A philosophical analysis of the ethical dimensions and responsibilities of the engineering profession. Specific case studies and ethical issues are analyzed through the application of some of the basic concepts and principles of traditional and contemporary ethical theories. Meets Core Curriculum Essential Learning Outcome for Social Responsibility & Ethics (SRE).

PHIL.3350 Ethical Issues in Technology (Formerly 45.335) - Credits: 3

This course will examine important ethical issues and value conflicts emerging in contemporary science and technology. Through readings and class discussions students will not only have an opportunity to explore the manner in which ethical and technical problems are related, but to develop insight into areas of ethical philosophy and modes of reasoning essential to an intelligent understanding of such issues. Meets Core Curriculum Essential Learning Outcome for Social Responsibility & Ethics (SRE).

PHIL.3360 Early Modern Philosophy - Credits: 3

Examines Early Modern European Philosophy and its religious and scientific context, including movements such as the Mechanical Philosophy, Rationalism, Empiricism, and Transcendental Philosophy. Topics include knowledge and scientific understanding, the human mind and personal identity, and the debate between faith and reason.

PHIL.3390 Poetry and Philosophy After Plato (Formerly 45.339) - Credits: 3

After defining "Neoplatonism" with reference to Plato's Phaedo, Symposium, and Phaedrus, the course will consider the relationships among Homer's Odyssey, Plotinus's Enneads, Virgil's Aeneid, Augustine's Confessions, and Dante's Divine Comedy. The focus will be on coming home to the "source and origin" after having been away and, as the philosopher Plotinus puts it, having been "a stranger in something strange". Students will be invited to work on other literary and philosophical treatments of this theme in English, Irish or American poetry and writing. A principal concern of the course is language "sung, spoken, and written". Accordingly, the course will applicable to, and count for the Philosophy and Communications track.

PHIL.3400 Mysticism: East and West (Formerly 45.340) - Credits: 3

This course explores the religious and psychological phenomenon known as the mystical experience, both within the context of organized religion and outside it. We will approach this subject from a comparative standpoint, considering examples from Christianity, Judaism, and Islam and also from Eastern religions such as Buddhism and Taoism. We will make use of philosophy, psychology, theology and literature in order to try to understand mysticism and its relation to religion. Readings include The Upanishads, the Tao Te Ching, the Bible, and Plato. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

PHIL.3410 German Philosophy - Credits: 3

In this course, students will be exposed to the rich tradition of German philosophy. Beginning with the emergence of philosophical works written in German in the 14th century, the course follows the historical progression of German philosophy up until the mid-20th century. Along the way, students will be introduced to major and minor figures in the German philosophical tradition. Through this course, students will understand the contributions of German philosophy to German culture and shaping German's national identity. Additionally, students will recognize connections between German philosophy and the wider Western philosophical tradition.

PHIL.3420 Critical Theory & Society (Formerly 45.342) - Credits: 3

The nature and methods of a critique of society that focuses on the conflicts between the various modes of rationality and rationalization.

PHIL.3470 Greek Tragedy & Philosophy (Formerly 45.347) - Credits: 3

Philosophers such as Plato, Aristotle, Hegel, and Nietzsche have drawn inspiration from, and challenged critically, the great Greek tragedians Aeschylus, Sophocles and Euripides. This course will play off philosophical commentaries against the specific tragedies they have targeted in order to examine the often tense relationship between philosophical discourse and tragic poetry.

PHIL.3480 Eastern Philosophy and Religion (Formerly 45.348) - Credits: 3

A comparative study of the major strand and themes of Eastern thought and philosophies, encompassing principally the Japanese, Chinese, and Indian traditions.

PHIL.3500 World Philosophies (Formerly 45.350) - Credits: 3

This course will fuse the historical and the thematic approaches in order to undertake a comparative examination of the relations of the great philosophical traditions (Chinese, Indian, Western, Islamic, and Japanese) to the perennial issues of
philosophy. The main focus will be the continuing vitality and heuristic fertility of these traditions and their ability to define how human meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

PHIL.3510 Problem of Evil (Formerly 45.351) - Credits: 3
Why is there evil and suffering in the world? This course looks at the explanations that have been given in the various religions of the world and considers the strengths and weaknesses of each approach.

PHIL.3520 Existence & Anxiety (Formerly 45.352) - Credits: 3
Explores basic questions of human existence in 19th and 20th Century philosophy and literature. Topics include anxiety and alienation; freedom and responsibility; authenticity and bad faith; individuality and mass society; rationality and the absurd; values and nihilism; and God and meaningfulness. Meets Core Curriculum Essential Learning Outcome for Social Responsibility &Ethics (SRE).

PHIL.3530 Gender and Religion (Formerly 45.353) - Credits: 3
This course examines gender in philosophy of religion and philosophy of theology. Issues addressed include the nature of gender, the divine gender, religious oppression and liberation of women, and LGBTQIA+ issues.

PHIL.3570 Science and Religion (Formerly 45.357) - Credits: 3
A study of the multiple relations between science and religion focusing on the theme of creativity. The problem of the various truth claims of the two systems will be subjected to a close analysis and principles developed to understand how conflicts between the them can be understood and resolved.

PHIL.3610 Equality, Justice and the Law (Formerly 45.361) - Credits: 3
This class investigates the American fascination with the “rule of law.” Questions to be considered include the following: What do we mean by the rule of law? What is the relation between law and morality? How does the rule of law promote justice, and what is its connection with the ideal of equality? What is the role of a written Constitution in protecting the rule of law? Special emphasis will be given to the Equal Protection clause of the Constitution and its role in prohibiting discrimination against disadvantaged groups, including racial minorities, women, and the handicapped. We will also consider in detail some theories of constitutional interpretation, including the Original Intent theory.

PHIL.3620 Democracy and Its Critics (Formerly 45.362) - Credits: 3
Explores the diverse roots of the democratic ideal and the opportunities and dangers associated with democratic politics. The arguments for and against democracy will be analyzed. Meets Core Curriculum Essential Learning Outcome for Social Responsibility &Ethics (SRE).

PHIL.3650 Capitalism and Its Critics (Formerly 45.365) - Credits: 3
This course explores the historical evolution of capitalism, from its early beginnings in the Enlightenment to the most recent debates about the free market and globalization. The focus will be on the debate over the virtues and vices of capitalism as distinct from other modes of economic and political organization. Concepts to be discussed will include freedom, equality and the distribution of wealth. Readings include Adam Smith, Karl Marx, Max Weber, Joseph S, and others.

PHIL.3660 Globalization and Its Critics (Formerly 45.366) - Credits: 3
The course explores globalization as the process of transformation of regional and national phenomena into global ones, analyzing its social, economic, political, and cultural aspects. Supporters view it as the progress of liberalization and democratization that develop peaceful international cooperation; critics see globalization as the expansion of the profit-seeking global corporations that abuse the less developed and vulnerable regions. The course readings include the works of Amartya Sen, Samuel Huntington, Joseph Stiglitz, and other leading economists, sociologists, and philosophers.

PHIL.3670 Feminism and Liberalism (Formerly 45.367) - Credits: 3
Liberalism stresses the importance of protecting individual people’s right to live their lives however they see fit. Feminism strives to show that women are subject to a variety of injustices that prevent them from being able to live lives that are as good as men’s. The aim of this course will be to consider whether liberalism and feminism are compatible, or whether the central ideals of liberalism--ideals like equality, autonomy, and individual rights--actually function to entrench not just sexism but also racism, classism, and other kinds of oppression. Readings will include both historical and contemporary writers such as Isaiah Berlin, Thomas Hobbes, John Locke, Catherine MacKinnon, John Stuart Mill, Martha Nussbaum.
PHIL.3680 The Politics of Food (Formerly 45.368) - Credits: 3

This class will examine the moral and political implications of the food we eat. Topics we'll cover include genetically modified organisms, factory farming, animal rights and welfare, agricultural pollution, agricultural subsidies, third world hunger, the obesity epidemic, and the industrial food system and its alternatives.

PHIL.3690 History of Moral Philosophy (Formerly 45.369) - Credits: 3

This course explores the history of moral philosophy by examining the writings of key thinkers in the Western philosophical canon, including Leibniz, Hume, Kant and Hegel. We will focus on four basic types of moral reasoning: perfectionism, utilitarianism, intuitionism, and Kantian constructivism. Our goal will be to understand how these thinkers from the modern period of moral philosophy have influenced the way contemporary philosophers think about morality. Meets Core Curriculum Essential Learning Outcome for Social Responsibility & Ethics (SRE).

PHIL.3700 Metaphysics (Formerly 45.370) - Credits: 3

This course examines fundamental issues and topics in contemporary metaphysics. Broadly construed, metaphysics refers to the nature of existence and reality, or more basically, being. Topics in the course include: persistence, personal identity, human ontology, free will, possible worlds and modality, causation and paradoxes.

PHIL.3710 Buddhist and Zen Philosophy (Formerly 45.371) - Credits: 3

Explores Buddhist and Zen philosophy and practice from ancient India through its developments in China and Japan to contemporary America. Attention is given to significant philosophical movements such as Abhidharmika, Madhyamika, Yogacara, Huayen, and Chan (Zen).

PHIL.3720 Chinese Philosophy (Formerly 45.372) - Credits: 3

An introduction to the Chinese philosophical tradition in translation, especially the classical schools of Confucianism, Daoism, Mohism, and Legalism. Later developments in Buddhist and Neo-Confucian thought will also be explored.

PHIL.3730 Arabic and Islamic Philosophy (Formerly 45.373) - Credits: 3

An introductory survey of selected philosophical topics and figures in the Arabic-speaking world, focusing on the development of classical Arabic philosophy (falsafa) through its proponents and critics from al-Kindi (9th century) to Averroes (12th century). The course can also include speculative theology (kalam), mystical philosophy (Sufism), later developments, and contemporary issues.

PHIL.3740 Myth, Ritual and Festival (Formerly 45.374) - Credits: 3

This course aims to analyze the social, cultural, and religious phenomena of the festival or holiday in its connection with myth and ritual. We focus in particular on the groundbreaking work of the Russian literary theorist Mikhail Bakhtin and his analysis of the cross-cultural features of the idea of the festival, for example the Roman Saturnalia, the British May Day festival, and our modern thanksgiving, Christmas, and New Year festivals. We will also consider other important contributions to the study of ritual and festival, including those of James Frazer, Mircea Eliade, and Joseph Campbell. A substantial part of the class will be focused on the sociological and historical aspects of the role of festival in modern society. We will also attempt to place the festival and holiday tradition within a larger framework of the role of myth and ritual in religion.

PHIL.3750 Philosophy of Sex and Love (Formerly 45.375) - Credits: 3

The aim of this course is to introduce students to both historical and contemporary discussions surrounding the topics of sex and love. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

PHIL.3760 The Ethics of War and Peace (Formerly 45.376) - Credits: 3

This course examines theories about why human beings engage in mass killing, the history of moral deliberation about war in major religious traditions, and modern philosophical analyses of the diverse moral principles that those traditions have bequeathed to us. The course comprises three broad ethical questions. First when, if ever, is recourse to arms legitimate (jus ad bellum)? Second, what constraints should apply to military conduct (jus in bello)? And third, how should wars end (jus post bellum)? These three questions will be systematically discussed by critically examining a selection of writings by historical and modern secular and religious thinkers.

PHIL.3780 Philosophy of Peace and Nonviolence (Formerly 45.378) - Credits: 3

This course examines philosophical theories of peace, pacifism,
and nonviolence. We will study ancient and modern accounts, secular and religious traditions, as well as feminist perspectives in the philosophy of peace and nonviolence. We will explore philosophical applications of nonviolence toward nonhuman animals and the natural environment, along with specific cases of nonviolent resistance in contemporary global conflicts.

PHIL.3830 Philosophy of Death and Dying (Formerly 45.383) - Credits: 3

This course is a philosophical and interdisciplinary examination of prominent issues concerning the meaning of life and death and the ethical concerns involved with life, death and end of life issues. Topics in the course include: definitions of death, metaphysics and death, cultural meanings of death, the ethics of killing vs. letting die, euthanasia and suicide, and rights of the dying. Meets Core Curriculum Essential Learning Outcome for Social Responsibility &Ethics (SRE).

PHIL.3840 Philosophies of Art and Beauty (Formerly 45.384) - Credits: 3

Examines the views of major philosophers on the beautiful and the nature of artistic creativity. An attempt is made to correlate the views of the thinkers with the works of poets, artists, and composers and the statements the latter have made about their work.

PHIL.3850 Philosophy of Popular Culture (Formerly 45.385) - Credits: 3

This course analyzes those forms of art/entertainment commonly referred to under the umbrella term "popular culture" through a variety of philosophical lenses. After seeking to establish a categorization of "popular culture," students will examine the mediums of music, film, television, advertisements and sports. Throughout the course, students will read/listen/watch various examples of the mediums listed above and attempt to answer various questions about them such as: what societal values make these examples popular at a current moment? What cultural assumptions do these examples reflect? What is the artistic/aesthetic merit of these examples?

PHIL.3860 Ancient Philosophy (Formerly 45.386) - Credits: 3

A survey of the beginnings of philosophy, mainly western, from the Presocratics to Augustine. Studies the emergence of philosophy out of mythical forms of thinking and the development of rational thought in the work of Plato, Aristotle, the Stoics, the Epicureans, and the Neoplatonists.

PHIL.3870 Plato and Beginning of Philosophy (Formerly 45.387) - Credits: 3

It is Plato who first uses the words 'philosopher" and "philosophy", and who, in his dialogs or dramatic discussions, establishes for all subsequent Western thought just was the enterprise of philosophy will be. In our study of these dialogs we will trace the origins in Plato of philosophy's primary questions concerning what is real and true as opposed to mere appearance (ontology, metaphysics), what is knowledge as opposed to mere opinion (epistemology), what is valid argument (logic), what is beautiful (aesthetics), and what is good, just and fair (ethics, politics). Plato foregrounds speech and language in all these considerations. Hence language, as the medium of thought and communication, will be a fundamental concern throughout our study.

PHIL.3880 Latin American Philosophy - Credits: 3

Students in this course will be introduced to current and longstanding debates within Latin American Philosophy. They will also be exposed to many of the principle texts and thinkers within this burgeoning tradition. The class includes a survey of Latin American philosophy ranging from pre-colonial Aztec thought to the debates over the struggle for Latin American independence, and also the question of identity: what constitutes Latin American philosophy.

PHIL.3890 Immigration and Global Justice - Credits: 3

This course addresses the question of justice in regards to immigration policy. We consider a variety of views including Communitarianism, Liberalism, Nationalism, Cosmopolitanism, and Democratic Theory. We will look at how these different positions have answered the following sorts of questions: Do we have duties to strangers of foreigners that are of equal weight to the duties we owe to members of our family, our circle of friends or our nation? Does part of the definition of "self-determined state" include the right to unilaterally reject petitions of inclusion from non-citizens? Does a commitment to equality demand that borders be open?

PHIL.3900 Philosophy of Sport - Credits: 3

This course is an introduction to and survey of the philosophy of sport. In this course, students will consider the nature and existence of sports, as well as the relationship of sports to various games and social practices. Additionally, the ethical implications of various aspects of sports will be presented, with an application of these ethical issues to various real-life problems and examples. Overall, sports will be analyzed as a reflection of human nature and social realities, and its examination will provide important insight to our existence.

PHIL.4010 Bioethics and Genetics Research (Formerly 45.401) - Credits: 3

This course addresses ethical issues that arise in biomedical research and practice including autonomy in the doctor-patient
relationship, the duty of confidentiality, the right to refuse treatment, the right to death with dignity, the ethics of experimentation with human subjects, the ethics of genetic enhancement, and justice in health care distribution. The course will combine theoretical perspectives and concrete case studies that illustrate actual dilemmas that the health care profession has in fact encountered over the years.

PHIL.4910 Directed Studies (Formerly 45.491) -
Credits: 1-4

The student, through regular and frequent consultation with an instructor, pursues a special problem in philosophy, the results of which are presented in a 25-30 page paper.

PHIL.4951 Senior Capstone - Credits: 3

This course is designed to provide philosophy majors with a capstone project involving integration of their coursework in philosophy in the form of an independent research project under the supervision of a faculty member. The capstone will be taken during the senior year (students in the Communications program may take the Practicum instead of the Capstone). The class is designed to meet the Essential Learning Outcomes of Written and Oral Communication, Applied and Integrative Learning, and Information Literacy.

PHIL.4960 Practicum (Formerly 45.496) - Credits: 3

The practicum is a 3-credit internship at a professional site relevant to the student’s course of study. Students are required to write a term paper at the end of their internship.
The Department of Political Science offers a Bachelor of Arts degree with a major in Political Science that allows students to pursue one of the following four concentrations:

- American Politics
- International Relations and Comparative Politics
- Law and Politics
- Political Communication and Public Opinion

To graduate Political Science majors must:

- Fulfill the Core Curriculum requirements (33-38 credits), which all university students must satisfy
- Earn the required Political Science credits (min. credits 36 and max. credits 48) 5 core courses (15 credits) 75-100 hours of internship or service activity (in conjunction with either POLI.4960 (https://www.uml.edu/catalog/courses/POLI/4960) or POLI.4970 (https://www.uml.edu/catalog/courses/POLI/4970), one of the 5 core courses) 7 additional courses in one concentration, including upper level seminar requirements (21 credits)
- Complete all other requirements that students in the College of Fine Arts, Humanities & Social Sciences must fulfill. At least 72 credits must be for courses taken outside of the Political Science Department.
- Maintain a minimum GPA of 2.0

**American Politics Concentration**

American Politics students examine a wide range of political beliefs and ideologies, political institutions, and citizen engagement in politics from many methodological perspectives. Their career goals might include: federal government agencies, local government, military service, social movement activism, non-profit organizations, public policy.

**International Relations and Comparative Politics Concentration**

Comparative Politics analyzes political and social phenomena within countries, and systematically compares various political and development outcomes. International Relations studies present and past global interactions among state, non-state actors, and international organizations and their impact on issues ranging from foreign policy to human rights and environmental sustainability. Students will explore different world regions (Europe, Latin America, Asia, Middle East, Africa), issues related to global peace, conflict, and security, and substantial economic and social issues. This concentration prepares students for careers in international organizations, NGOs, foreign service, security studies, peace and development studies, private sector, military service.

**Law and Politics Concentration**

Law and Politics students take several courses designed to explain legal concepts, the institutions of American law, and constitutional debates. They develop deep skills of arguing, processing information, clear writing, and effective speaking. The goal of this focus is development of broad skills in addition to political knowledge, admission to law school, success in law school, and preparation for a legal career (e.g. lawyer, paralegal).

**Political Communication and Public Opinion Concentration**

Political Communication and Public Opinion focuses on the flow and content of information and ideas. Students examine public opinion data, strategies of rhetoric, new media (e.g. social media, online news) and examine the influence political messages can have on citizens, their beliefs, and political behaviors. Students who study this concentration may choose careers in political campaign management, journalism, public opinion polling, or public relations.

View all the complete Degree Pathways (https://www.uml.edu/FAHSS/Political-Science/Program-of-Study/political-science-major.aspx).

For additional information contact the Political Science Department (https://www.uml.edu/FAHSS/Political-Science/Contact-Us.aspx).

**College of Fine Arts, Humanities & Social Sciences**

Degree Pathways are a sample semester-by-semester sequence of courses which might be followed for successful completion of a degree, diploma, credential or certificate from the university. Students should follow the degree pathway appropriate to their catalog year. A students catalog year is typically defined by the date of their entry into the University of Massachusetts Lowell.

Total Minimum Credits = 120

Minimum Political Science credits: 40

Maximum Political Science credits that can be counted toward graduation: 45
Minimum upper level credits: 18 with a minimum of 6 at 4000 level plus 12 at 3000 level or higher (POLI.3010, POLI.4960, or POLI.4970) count toward these requirements. One of these advanced courses must be a seminar, which is a small class of advanced students, focused on more intensive writing than usual classes. The topics of seminar courses will vary each semester with the interests of department faculty.

You should meet with your faculty advisor to determine how you will meet the Political Science and Core Curriculum requirements.

1No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum policy for further details.

2World Ready Language Track (WR track) requires successful completion of a two course sequence in a World Language (depending on placement) and three approved courses on the culture/history/literature/film related to that language, but taught in English. (Total of 15 credits.) For detailed information refer to Policies - Language Requirements in the undergraduate catalog.

3Political Science majors satisfy the Written and Oral Communication (WOC) ELO by taking an approved, 4000-level Political Science seminar course. See your Advisement Report or the WOC Course Listing for a current list of approved courses.

4Sustainability and Environmental Politics Electives (Sophomore):

- **POLI.1050**
  (Introduction to Public Policy)
- **POLI.1750**
  (Introduction to Environmental Politics)
- **POLI.2001**
  (Comparative Environmental Politics)
- **POLI.2650**
  (State and Local Politics)

5Sustainability and Environmental Politics Electives (Junior):

- **POLI.3001**
  (Environmental Security)
- **POLI.3002**
  (Climate Change Communication)
- **POLI.3320**
  (Politics of Food)
- **POLI.3580**
  (Global Environmental Policy)
- **POLI.3780**
  (International Political Economy)
- **POLI.4001**
  (Environment, Racism, and Justice)

6Approved 4000-level Seminar:

- **POLI.4020**
  (Women in Islam)
- **POLI.4060**
  (The Politics of Identity in the Middle East)
- **POLI.4220**
  (Political Communication and Media Studies)
- **POLI.4400**
  (Comparative National Security)
- **POLI.4450**
  (Politics of Repression and Dissent)
- **POLI.4470**
Current UMass Lowell students should use their Advisement Report in SiS (https://www.uml.edu/Enrollment/SiS/default.aspx). Political Science majors will also be assigned to a faculty advisor who guides students through their studies. The department strongly suggests scheduling an advising meeting once per semester.

**Restriction on off-campus study:**

Be advised that any course taken at another institution must be formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the catalog policy (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

_Last updated: 3/11/2022_
POLI.1010 Introduction to American Politics (Formerly 46.101) - Credits: 3

POLI.1010SI Supplemental Instruction for Political Science - Navitas Only (Formerly 46.101SI) - Credits: 1
Supplemental Instruction for Political Science - Navitas Only. Credits do not count toward degree requirements.

POLI.1050 Introduction to Public Policy (Formerly 46.105) - Credits: 3
An introductory survey of the major forces and processes involved in the development of public policy; contemporary issues in public policy will also be considered.

POLI.1100 Introduction to Politics (Formerly 46.110) - Credits: 3
An introductory exploration of basic political concepts, ideologies, and themes. Stresses the importance of understanding politics for everyday life.

POLI.1110 Election of 2012 (Formerly 46.111) - Credits: 3
An examination of the American election process in this presidential election year. Attention especially is given to candidates, political issues, political parties, and financing, among other factors, within the process and their influence in the election outcome. Strengths and weaknesses of the election process and reform proposals and prospects will also be addressed.

POLI.1120 Introduction to Comparative Politics (Formerly 46.112) - Credits: 3
What is democracy? What factors explain the demise of some authoritarian regimes? How can we explain the persistent underdevelopment of certain countries? What factors explain why civil war emerges in some weak states but not in others? These are the kinds of questions that Comparative Politics seeks to answer and this class will introduce central topics and theories in comparative politics. It will also analyze variations in similarities across regions of the world using in-depth analysis and systematic comparison across and within countries. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

POLI.1210 Introduction to International Relations (Formerly 46.121) - Credits: 3
Surveys some recent methods and approaches used in the study of international politics and provides an introduction to current problems of foreign policies of major world powers. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

POLI.1750 Introduction to Environmental Politics (Formerly 46.175) - Credits: 3
This course introduces major concepts in environmental politics to provide a comprehensive understanding of the formation of environmental policy in the United States. Throughout the course, particular attention is paid to the role of government and markets in creating environmental crises and shaping policy responses.

POLI.2001 Comparative Environmental Politics - Credits: 3
This course focuses on how differences in political institutions, culture, regulatory style, and economic structure play in shaping environmental policies; the impact these differences have on the ability of states to achieve cooperative solutions to common environmental problems; and how international environmental interactions shape domestic environmental policy.

POLI.2010 Research Methods in Political Science (Formerly 46.201) - Credits: 3
Introduces the Political Science major to the scope of politics as a discipline. Highlights value questions through analysis of the political, socio-demographic and constitutional background of selected contemporary public issues and policies.

POLI.2110 Media and Politics Around the World (Formerly 46.211) - Credits: 3
For centuries, politicians have depended on media to reach and persuade citizens, yet the role of media in politics remains much debated. This course introduces students to the theories on the relationship between media and politics using a case study approach. Because much of what we know about the media comes from studying media in the United States, we will start with cases in the U.S., but because much of what we need to know about media and politics involves media in other countries, we will spend much of the course looking at media and politics in developing and democratizing countries.

POLI.2120 American Media and Politics (Formerly
This course explores the role of the media in American politics and the role of politics in the American media. We focus first on the historical evolution of newspapers, radio, television, and the internet as vehicles of political news reporting. Next, we look at instances of journalistic bias and distortion in order to explore how corporate consolidation and commercial competition have affected the news industry. Finally, by studying a selection of major stories in depth, we will gain a better understanding of the factors involved in the conversion of political events and developments into seemingly significant news.

POLI.2150 African Politics (Formerly 46/57.225) - Credits: 3

The images of Africa most commonly seen in the US flood our minds with inconsistent messages. Africa is portrayed and discussed as a locus of ancient tribal conflicts, disease, famine, and suffering. While struggles do occur - just as they do in all places - understanding the diverse experiences of the peoples of Africa requires engagement with the cultures, politics, religions, and perspectives of people in more than fifty countries across a vast continent. While such engagement can hardly be accomplished in a semester, we will attempt to scratch at the surface in different ways that reveal ideas, experiences, and thoughts that reflect political life and culture in Africa south of the Sahara in a more reflective manner. Throughout this course, I challenge you to remember that politics as we usually conceive them - the policies, programs, and posturing of government and public organizations - are a backdrop to the way real people live their lives every day. Policies and political systems are less important for the fact that they exist than for the ways in which they affect the lives of those they govern. With this approach, I hope we will be able to pick apart government structures, political organizations, and policy issues in ways that will shed light on the construction and culture of African politics. This requires a focus on power - who has it, how they use it, and to what ends.

POLI.2180 Introduction to Politics and Sports (Formerly 46.218) - Credits: 3

Analyzes the growing importance of sports in American life. Examines the psychological, political and social impact of sports on society. Discusses how sports have been shaped by such monumental events as war, the civil rights movement, and the changing economy.

POLI.2210 Introduction to Global Security - Credits: 3

This course offers a solid grounding in the various theoretical approaches to international security and explores a variety of international security issues.

POLI.2220 Politics of the Internet (Formerly 46.222) - Credits: 3

This course will examine the influence social media and web connectivity have had on political campaigns, campaign fundraising, political mobilization, and the recent proliferation of democratic movements.

POLI.2300 Law and the Legal System (Formerly 46.230) - Credits: 3

Presents an introduction to the nature of the legal process and the operation of the American legal system. Also discusses considerations of its political and social functions.

POLI.2310 Introduction Political Thought (Formerly 46.231) - Credits: 3

A critical survey of the history of Western political thought from Plato to the present.

POLI.2400 Contemporary Political Theory - Credits: 3

Examines major ideological currents in the contemporary world. Topics include communism, fascism, anarchism, socialism, nationalism, liberalism, and utilitarianism.

POLI.2510 Politics of Identity (Formerly 46.251) - Credits: 3

This interdisciplinary course considers the way we construct self-identity through our affiliation with various cultural and political groups - from the “Red Sox nation” to linguistic, economic, nationalistic and ethnic groups. It examines the central role of nationalism; its symbols, traditions and expectations; the role of the media; and the benefits and risks of our allegiance to these groups.

POLI.2530 Introduction to Public Administration and Policy (Formerly 46.253) - Credits: 3

An examination of the little studied fourth branch of government. Bureaucratic power in the American political system is reconsidered.

POLI.2650 State and Local Politics (Formerly 46.265) - Credits: 3

Examination and study of politics and government at the state and local levels, with emphasis on Massachusetts and New England. Practitioners from state and local government will meet with the class.
POLI.3001 Environmental Security - Credits: 3
The central goals of this course are (1) to give students a solid grounding in various analytical approaches to environmental security, and (2) to explore a variety of environmental security issues. This is a heavily analytical course; critical thinking is required equipment.

POLI.3002 Climate Change Communication - Credits: 3
This course examines climate change communication and its role in achieving climate change policy goals. Together we will study the ethical issues that shape and stem form science communication, climate change communication more specifically, and community engagement strategies. Among the ethical issues we will discuss are how best to achieve an informed citizenry, the role of informed consent, what it means for government to protect citizens, and the role of precaution in government risk management. The course also examines the practical aspects of how climate change is communicated, the theories behind current practices, and the scientific evidence regarding the effects of different practices.

POLI.3010 Quantitative Methods in Political Science (Formerly 46.301) - Credits: 3
This is a course in designing Quantitative Research and applying statistics for Political Scientific. Meets Core Curriculum Essential Learning Outcome for Critical Thinking & Problem Solving (CTPS) and Quantitative Literacy (QL).

POLI.3020 Research and Writing for Political Science (Formerly 46.302) - Credits: 3
This course provides political science majors with opportunities to hone their research and writing skills. Students analyze representative scholarly and popular sources, explore writing for various venues; and practice editing and revising their work. With prior arrangements students may use this course to complete an honors thesis, pursue an independent research project, or revise and expand an especially promising research paper submitted in a previous course.

POLI.3021 The Age of Nixon - Credits: 3
Explores the political impact, cultural legacy, and historical placement of politician Richard M. Nixon (1913-1994). Using the methodologies of history and political science, this course considers Nixon’s political and personal trajectory, his domestic and foreign policies, and his impact on the world during his lifetime and posthumously. Attention and debate will also focus on the revised view and legacy of Nixon’s reputation and his actions both reviled (Watergate, Invasion of Cambodia) and championed (Creation of the EPA, Opening of diplomacy with Communist China).

POLI.3040 Politics of Development (Formerly 46.304) - Credits: 3
This course considers the politics of the global development process, the actors involved and the contexts within which development occurs.

POLI.3070 American Political Thought (Formerly 46.307) - Credits: 3
A survey of the historical development of American political thought from the colonial era to the present.

POLI.3090 Political Psychology (Formerly 46.309) - Credits: 3
An in-depth examination of the acquisition and role of political attitudes, values, belief systems, and other psychological mechanisms in shaping political behavior and conflict.

POLI.3100 'Isms' in American Politics (Formerly 46.310) - Credits: 3
An examination of major ideological, philosophical and social currents.

POLI.3110 Foundations of Law: Process & Skills (Formerly 46.311) - Credits: 3
Foundations of Law, Process & Skills” presents a comprehensive introduction to the skills, process, expectations, and substantive law presented in the first year of law school. Many students in the social sciences consider the idea of pursuing law school, but have no meaningful avenue to explore the true flavor of the experience, or the commitment they would be taking on. Law School can be immensely rewarding, yet requires a substantial investment of time, personal dedication and financial obligation. The course will provide everything students need to know about the law school experience, while gaining invaluable academic skills in the process, whether or not they choose the law school path.

POLI.3120 Campaign and Election law (Formerly 46.312) - Credits: 3
This course instructs students on campaign and election law; including all relevant cases, statutes and regulations. Students will gain knowledge and skills useful for both future political campaign activity and postgraduate study.

POLI.3130 Electoral Politics (Formerly 46.313) -
This course will examine voting behavior in American elections: how voters make decisions, the changing nature of campaigns, the influence of money, media, and polling, and related matters.

POLI.3140 Parties and Interest Groups (Formerly 46.314) - Credits: 3
An examination of party systems and coalitions in the US, their changing nature over time, the history of realignment, and the relationship of parties to interest groups.

POLI.3160 Politics and Film (Formerly 46.316) - Credits: 3
Analysis of the role of film in creating, expressing, revealing, and responding to social and political ideas and values. Examines a variety of film and film styles and introduces students to elements of film theory, the theory of popular culture and the role of film in forming our ideas about the world.

POLI.3190 Survey Research (Formerly 46.319) - Credits: 3
The techniques, methods and uses of Survey Research in contemporary Politics and Policy.

POLI.3200 Gender Law and Politics (Formerly 46.320) - Credits: 3
Explores legal constructions of gender by examining Supreme Court cases, federal legislation, historical documents, news stories, and scholarly essays on sexual inequality in the United States. Topics include the evolution of the family as a legal (and illegal) reality; political regulation of reproduction and sexual activity; feminist critiques of economic inequality; the rise and fall of affirmative action; the changing role of gender in class consolidation; and ongoing debates about the relationships between public and private life.

POLI.3210 Soccer and Politics (Formerly 46.321) - Credits: 3
This course analyzes the social, political and business aspects of the World Cup, the most popular sporting event in the world. The course will study the evolution of the World Cup, from the 1930's when fascist regimes used the Cup to buttress their doctrines to the emergence of new soccer powers like the U.S.

POLI.3230 Politics and Baseball (Formerly 46.323) - Credits: 3
Introductory look at the interaction between the world of baseball and the social and political structures which influence the sport.

POLI.3240 Politics of Football (Formerly 46.324) - Credits: 3
How the rise of pro football's popularity reflects changes in American society during the 20th century. An examination of how politics, economics and television created a sport that has become an American obsession, and some argue, a new religion.

POLI.3290 Politics of College Sports (Formerly 46.329) - Credits: 3
Current controversies over the role of college sports within an academic environment with particular attention to Title IX, the pivotal law that altered gender in college sports.

POLI.3310 Animal Rights and Animal Welfare (Formerly 46.331) - Credits: 3
This course examines how the structure of the human/non-human animal relationship affects or determines the nature of public policy formation on issues with impacts on non-human animals, both nationally and internationally.

POLI.3320 The Politics of Food (Formerly 46.332) - Credits: 3
The course will examine current debates in food politics over: regulatory politics and the appropriate reach of the state in food labeling, safety, and oversight; genetically modified food, organic and sustainable agriculture, the effects of economic globalization of the food supply chain and the future of the world food system.

POLI.3340 Islam and Politics (Formerly 46.334) - Credits: 3
The course will explain the nature of the relationship between Islam and Politics by examining the rise of the first modern Islamic movement, and by examining other Islamic movements that spread throughout the Muslim world.

POLI.3350 Constitutional Law: Powers & Principles (Formerly 46.335) - Credits: 3
A study of constitutional law focused on the powers and principles of American government. We will discuss
Declaration of Independence and Revolution, separation of powers, federalism, natural rights, and ordered liberty, emphasizing the case law on the origins of judicial review, the Commerce Clause, war powers, executive privilege, elections, criminal procedure, and search under the Fourth Amendment. Political Science offers two courses in constitutional law for students from any major who are preparing for law school or seeking a background in how constitutional law influences American politics and culture. POLI.3330 or POLI.3370 can be taken alone or both courses in either sequence. On campus and online versions are identical, so students can take each course in either format.

POLI.3370 Constitutional Law: Rights & Liberties (Formerly 46.337) - Credits: 3
A study of constitutional law focused on rights and liberties. We will discuss the balance of liberty and authority under the Constitution, the Bill of Rights, the Fourteenth Amendment, due process, and equal protection, emphasizing the case law on freedom of religion, speech, press, gun rights, LBGT rights, race, abortion, gender, and the death penalty. Political Science offers two courses in constitutional law for students from any major who are preparing for law school or seeking a background in how constitutional law influences American politics and culture. POLI.3330 or POLI.3370 can be taken alone or both courses in either sequence. On campus and online versions are identical, so students can take each course in either format.

POLI.3380 Political Participation (Formerly 46.338) - Credits: 3
Political movements; voting and elections, parties and interest groups; civil disobedience in American politics. Consideration of causes, fluctuations and trends.

POLI.3390 Judicial Review Seminar (Formerly 46.339) - Credits: 3
An advanced examination of the contemporary controversy over judicial activism and constitutional interpretation.

POLI.3400 American Politics And Law (Formerly 46.340) - Credits: 3
Perspectives on American Politics and Law. Advanced study involving extensive reading, writing and discussion seeking understanding of the major transformations impacting contemporary American Society, Politics, Law, Economics and Culture; consideration of different interpretations of these changes, and the ways in which they are manifested in shifting political attitudes and coalitions, and new problems and conflicts.

POLI.3430 Congress (Formerly 46.343) - Credits: 3
Legislative Politics. An advanced study of representation, campaigns and elections, and the functioning of the American national congress within the American political system.

POLI.3440 American Presidency (Formerly 46.344) - Credits: 3
An examination of the nature of the American presidency and its functioning within the American political system. Specific attention is given to the problems and evolution of the presidency since World War I.

POLI.3490 Politics of Race and Ethnicity (Formerly 46.349) - Credits: 3
A study of the politics of race and ethnicity, focusing primarily on American society, and the racial and ethnic groups of the region.

POLI.3500 Urban Politics and Policy (Formerly 46.350) - Credits: 3
A study of political power in, and the political structures of urban areas and the major issues and conflicts currently confronting them.

POLI.3510 Irish Politics (Formerly 46.351) - Credits: 3
For students of Politics, Ireland is perhaps one of the most fascinating examples of a territory that has undergone, and continues to undergo dramatic transformations in its governing structures, its passionate struggles for freedom, civil wars, colonial resistance and modern nationalism. This class will study the political history of Ireland before and during its time as a part of the United Kingdom, through the partition of the island into two states, and up to the modern politics of both the Republic of Ireland and the British state of Northern Ireland. We will examine the results of the 1998 "Good Friday Agreement". Then we will dissect and evaluate modern Irish institutions of government, in the Republic and in the North. Students will research the competing ideologies and present arguments supporting the parties and organizations that propound these ideologies, like Sinn Fein, the IRA, the Uster Unionist Party and Unionist paramilitaries in the North; the Fine Gael and Fianna Fail in the South.

POLI.3530 Public Policy and Administration (Formerly 46.353) - Credits: 3
An examination of the little studied fourth branch of government. Bureaucratic power in the American political system is reconsidered.
POLI.3550 Government Fiscal Policy (Formerly 46.355) - Credits: 3

An examination of government’s budgetary, taxation and expenditure decisions and activities.

POLI.3560 Public Policy Analysis (Formerly 46.356) - Credits: 3

This course examine issues in and techniques utilized in public policy analysis.

POLI.3570 Thoreau in Our Time (Formerly 46.357) - Credits: 3

This course traces Henry David Thoreau's influence on major social and political transformations in American history from the abolitionist movement to the present day. We will focus first on Thoreau's writings on slavery, commercial development, environmental history, and individual liberty. Then we will study his formative role in the civil rights and environmental movements of the twentieth century. Finally, through a mix of outside speakers and student presentations, we will explore how his writings continue to shape ongoing struggles to contend with climate change, advance social justice, and promote a greater sense of fairness in American life. The course will involve at least one trip to Walden Pond and a tour of Thoreau's birthplace in Concord, Massachusetts. Course page: http://faculty.uml.edu/sgallagher/Thoreau_in_Our_Time.html.

POLI.3580 Global Environmental Policy (Formerly 46.358) - Credits: 3

This course explores contemporary international environmental issues from both theoretical and policy perspectives; consideration too of broader forces impacting international environmental politics.

POLI.3590 British Politics (Formerly 46.359) - Credits: 3

The context, background and forces shaping the contemporary politics of Great Britain.

POLI.3600 European Politics (Formerly 46.360) - Credits: 3

An analytical examination of selected modern European political systems, emphasizing similarities and differences in political culture, behavior, institutions, and performance.

POLI.3610 Southeast Asian Politics (Formerly 46.361) - Credits: 3

A study of Southeast Asian countries, their anti-colonial struggles and their patterns of political development. Attention is also given to the recent struggle among the former Indochinese states and the broader international involvement in the region.

POLI.3630 Politics of China (Formerly 46.363) - Credits: 3

A study of the recent development of governmental institutions, parties, and ideology in China. Emphasis is placed on the processes of nation-building in the post World War II period.

POLI.3660 Russian Politics (Formerly 46.366) - Credits: 3

Conflict and Change in the former Soviet Union. An examination of the relationship of politics to the functioning of post-Soviet societies. The influence of politics on economy, education, family life, religion, etc.

POLI.3680 Middle East Politics (Formerly 46.368) - Credits: 3

The region will be analyzed using a comparativist lens, whereby the historical context of creating nation states in the region and the effect of colonialism will be applied to contemporary politics. Women, religious/ethnic minorities and the dynamics of the Arab Spring will also be addressed comparatively.

POLI.3700 Latin American Politics (Formerly 46.370) - Credits: 3

The context, background and forces shaping the contemporary politics of the Latin American region.

POLI.3740 Democracy and Development (Formerly 46.374) - Credits: 3

Explores the theories and experiences of countries newly converting to democracy in Asia, Africa, Latin America and the former Eastern Bloc. Also examines the strategies and prospects for development among the same countries.

POLI.3750 Politics of Pacific Rim (Formerly 46.375) - Credits: 3

An examination of the politics, policies and institutions of Japan, the "four tigers" and other countries of the Pacific rim area.
POLI.3780 International Political Economy (Formerly 46.378) - Credits: 3

An examination of the politics of global economic relations stressing the role of international institutions, multinational corporations and other international actors on the policies of the nation-state.

POLI.3800 American Foreign Policy (Formerly 46.380) - Credits: 3

A study of the processes of American foreign policy in the contemporary world.

POLI.3840 International Politics of Human Rights (Formerly 46.384) - Credits: 3

This course will address the history, content, structure, law, and politics of international human rights. Using interactive participatory class format students will learn analytical and critical thinking skills as well as written and oral communication skills.

POLI.3870 Politics of International Organizations (Formerly 46.387) - Credits: 3

This course will address the history, functioning, structure and politics of international organizations in world politics. International Governmental Organizations as well as Non-Governmental Organizations on the global and regional level will be analyzed and discussed. In a participatory and interactive class format students will develop analytical and critical thinking skills.

POLI.3900 Defense and Disarmament (Last Term 1994 Spring)(Formerly 45.390) - Credits: 3

An advanced study of the international security policies currently pursued by the United States, its allies and its adversaries; evaluation and analysis of the criticism of these policies and of the possibilities of achieving disarmament.

POLI.3980 The War on Drugs (Formerly 46.398) - Credits: 3

The war against drugs stands as both a major foreign policy priority for the US and the International community in general, and as a constant source of debate and contention. The aim of this course is to provide students with analytical tools, concepts, and information, which will enable them to critically evaluate the war on drugs beyond the common myths and misconceptions that often surround this highly controversial topic. By analyzing a wide range of countries around the world, students would gain an in depth and nuanced perspective of the relation between drug trade, violence, corruption, development, and democracy. Students will also gauge arguments and possible impacts on different drug policy options.

POLI.4001 Environment, Racism, and Justice - Credits: 3

Environment, Racism, and Justice

POLI.4010 Research Seminar (Formerly 46.401) - Credits: 3

Requires the writing of a substantial paper (or production of an equivalent project.) Typically, students should select a 300 level seminar course from among Departmental offerings that are of interest, all of which involve the writing of one or several papers, and select one paper or topic to expand upon. The student should then register in the Research Seminar section for the appropriate supervising instructor and expand the paper into a more substantial form.

POLI.4020 Women in Islam (Formerly 46.402) - Credits: 3

Focusing upon one of the most important topics in Islam, this course will go beyond conventional stereotypes and explore woman’s many and varied roles within Islamic cultures and societies.

POLI.4060 The Politics of Identity in the Middle East (Formerly 46.406) - Credits: 3

The course will examine the ethnic, political, religious and social changes in the modern Middle East. The course will start with an introduction to the diverse identities all over the Middle East and then it will comparatively examine a number of those identities.

POLI.4110 Dynamics Power and Authority (Formerly 46.411/57.511) - Credits: 3

This course surveys theories of power, authority, participation, and politics. Building on these theories, students will examine changing social, political, and economic patterns of inequality based on class, race (and related divisions of ethnicity, religion, caste, nationality), and gender. Reviews various approaches to altering these dynamics (business strategy, public policy, community and social movements). Cuts across units of firm, community, region, and nation, along with corresponding governmental institutions, and links theoretical analysis with study of practical problem solving. Instructor-initiated cases drawn from a variety of national experiences. Students will
learn techniques of power analysis and prepare a power analysis project.

POLI.4200 Reading and Simulation Experience International Organization (Formerly 46.420) - Credits: 3

Students take part in a simulation of the proceedings of a regional or international organization, e.g., U.N., O.A.S., O.A.U., or the Arab League. They study all aspects of the selected institution but concentrate on key economic, social and security issues discussed in the body’s debates. The course aims to give the student a clearer understanding of the forces and constraints which shape the foreign policies of individual states.

POLI.4220 SMR: Political communication and Media Studies (Formerly 46.422) - Credits: 3

Advanced study in contemporary issues in Political Communication and Media Studies.

POLI.4390 Justice and Trade in the Global Economy (Formerly 46.439) - Credits: 3

We know that we are part of a global economy and that many of the things we buy and consume are produced in other countries. But what do we know of how they are made? Do we understand that there may be hidden costs in the price we pay for goods at the supermarket, in a department store? Understanding the nature of global trade is critical for us to be effective citizens in the world. Perhaps more important is that we understand how goods are produced and traded - what many think of as “fair” trade. The subject of Fair Trade isn’t simply limited to the production and sale of coffee and chocolate. Fair Trade principles encompass environmental issues, human rights, and politics. Once aware of the ramifications of consumerism on all parts of the world, including the United States, people can make informed choices about the products they buy, the companies that employ them, and the political views they support. By the end of this course students should understand the major ideas and tools used to comprehend complex international and global trade relations. Students will understand the way in which goods are produced for global markets and the possible human and environmental costs such production entails.

POLI.4400 Comparative National Security - Credits: 3

The central goals of this course are two fold. The first is to explore the national security concerns and perspectives for the major countries and regions of the world. The second is to understand the connection between alternative constructions of national security and the security policies of nation-states. This is a heavily analytical course; critical thinking is required equipment. Students are expected to take the concepts and theories discussed in class and use them to analyze issues confronting societies and the policy responses mounted by political leaders.

POLI.4440 Advanced Research Methods (Formerly 46.444) - Credits: 3

Both quantitative and qualitative methods will be examined with a focus on locating and utilizing available data to study social questions.

POLI.4450 Politics of Repression and Dissent (Formerly 46.445) - Credits: 3

A focus on the dark side of politics - political repression, including politically motivated imprisonment, torture, murder, and disappearance- and the struggle of critics to bring about change through non-violent and violent demonstrations, general strikes and armed resistance.

POLI.4460 The Politics of Discord between the Arab East and The West (Formerly 46.446) - Credits: 3

The course examines the roots of political discord in the Arab East starting with colonialism and progressing to the contemporary state of dissension. Throughout the course the stress on the effect of this discord on comparative domestic politics and international relations in the region will be examined.

POLI.4470 Theories of Political and Criminal Violence (Formerly 46.447) - Credits: 3

The study of violence has been a central piece of debates in comparative politics that range from the causes of revolution to the analysis of civil wars. This course aims to provide a broad overview of different bodies of research on violence. The class will also revisit crucial debates in the study of violence, such as the problems of separating criminal and political violence (such as interstate wars). By the end of the course, students will be able to identify major theoretical and methodological approaches to violence, major debates and concepts, as well as key cases across the world.

POLI.4900 War and Peace in the Sovereign State System (Formerly 46.490) - Credits: 3

Despite much effort to limit the occurrence of interstate and intrastate war, such violence is still prevalent in the sovereign state system. This course will focus on the causes, dynamics, and outcomes of interstate and intrastate conflict and ways to sustain peace. We will examine the foundational works in the
area of conflict before moving quickly into more recent research. The class will emphasize student participation and the application of concepts we learn in class. Students are asked to write a final paper exploring a concept of war and peace in the sovereign state system.

POLI.4910 Directed Study (Formerly 46.491) - Credits: 1-3

Directed study offers the opportunity to engage in an independent study or research project under the supervision of a department member. Working closely with the instructor, students define and investigate a research problem in an area of special interest and present the results of their investigation through a combination of readings and papers and/or a significant research paper.

POLI.4920 Directed Study In International Organizations (Formerly 46.492) - Credits: 3

Advanced and intensive reading and other activity in connection with the study of selected international organizations.

POLI.4960 Experiential Learning in Political Science (Formerly 46.496) - Credits: 3-9

This course provides students with a practical appreciation for the work of politics emphasizing a universal skill set for polycentric, experiential learning. The course is designed to help ease the transition from a political science degree to a variety of academic and professional paths.

POLI.4970 Practicum in the Law Requirement. (Formerly 46.497) - Credits: 3

A program of study and research which includes involvement in and first-hand knowledge and observation of the legal system and legal practice. Open only to political science majors and, with certain restrictions, legal studies minors. The course will be graded S (satisfactory) or U (unsatisfactory). Meets Core Curriculum Essential Learning Outcome for Applied & Integrative Learning (AIL).

POLI.4980 Research and Internship/Service Experience Politics/Law (Formerly 46.498) - Credits: 3

Extensive Research/Writing undertaken in conjunction with an Internship/Service Experience in Politics and/or Law, by special arrangement and with permission of the instructor.
College of Fine Arts, Humanities & Social Sciences

Degree Pathways are a sample semester-by-semester sequence of courses which might be followed for successful completion of a degree, diploma, credential or certificate from the university. Students should follow the degree pathway appropriate to their catalog year. A student's catalog year is typically defined by the date of their entry into the University of Massachusetts Lowell.

American Studies

Total Minimum Credits = 121

1 Students must earn a grade of C or higher.

2 World Ready Language Track (WR track) requires successful completion of a two course sequence in a World Language (depending on placement) and three approved courses on the culture/history/literature/film related to that language, but taught in English. (Total of 15 credits.) For detailed information refer to Policies - Language Requirements (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) in the undergraduate catalog. The World Language requirement for Psychology majors can be met with sign language courses taken at Northern Essex Community College (NECC). More information about this policy is available on the Psychology Department website (https://www.uml.edu/FAHSS/Psychology/Current-Students/Advising.aspx). For information about the sign language courses and program at NECC, please visit NECC website (https://www.necc.mass.edu/). As with all off-campus courses, students taking sign language courses at NECC must complete a Prior Authorization for Off Campus Courses form (https://www.uml.edu/thesolutioncenter/Forms/Academic-Forms.aspx).

3 Required for entering Freshmen in the College of Fine Arts, Humanities & Social Sciences.

A major in Psychology consists of 36-54 psychology credits with at least 18 credits at the 3000 level or higher. Students transferring to the college and wishing to major in Psychology must make individual arrangements with the department chairperson regarding satisfaction of major course requirements. To graduate with a concentration as part of the Psychology degree, student must have both an overall GPA and a Psychology GPA of at least 3.0.

Core Curriculum Essential Learning Outcomes in the major are met as follows:

- Diversity and Cultural Awareness (DCA) is met by taking PSYC.2090 (https://www.uml.edu/catalog/courses/PSYC2090) or PSYC.2550 (https://www.uml.edu/catalog/courses/PSYC2550)
- Information Literacy (IL) is met by taking PSYC.2690 (https://www.uml.edu/catalog/courses/PSYC2690)
- Social Responsibility and Ethics (SRE) is met by taking PSYC.47xx (https://www.uml.edu/catalog/courses/PSYC)
- Written and Oral Communication (emphasizing Writing in the Discipline) (WOC) is met by taking PSYC.47xx (https://www.uml.edu/catalog/courses/PSYC)
- Critical Thinking and Problem Solving (CTPS) is met by taking PSYC.3750 (https://www.uml.edu/catalog/courses/PSYC3750)
- Applied and Integrative Learning (AIL) is met by taking PSYC.3750 (https://www.uml.edu/catalog/courses/PSYC3750)
- Quantitative Literacy (QL) is met by taking PSYC.3690 (https://www.uml.edu/catalog/courses/PSYC3690)

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) policy for further details. You should meet with your faculty adviser to determine how you will meet the Core Curriculum requirements.
Current UMass Lowell students should be using their Advisement Report in SiS (http://www.uml.edu/enrollment/sis/default.aspx). If you need assistance, please contact your adviser.

Restriction on off-campus study:

Be advised that any course taken at another institution must be formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the catalog policy (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

**Total Minimum Credits = 121**

1. Students must earn a grade of C or higher.

2. World Ready Language Track (WR track) requires successful completion of a two course sequence in a World Language (depending on placement) and three approved courses on the culture/history/literature/film related to that language, but taught in English. (Total of 15 credits.) For detailed information refer to Policies - Language Requirements [https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf] in the undergraduate catalog. The World Language requirement for Psychology majors can be met with sign language courses taken at Northern Essex Community College (NECC). More information about this policy is available on the Psychology Department website [https://www.uml.edu/FAHSS/Psychology/Current-Students/Advising.aspx]. For information about the sign language courses and program at NECC, please visit NECC website [https://www.necc.mass.edu/]. As with all off-campus courses, students taking sign language courses at NECC must complete a Prior Authorization for Off Campus Courses form [https://www.uml.edu/thesolutioncenter/Forms/Academic-Forms.aspx].

3. Required for entering Freshmen in the College of Fine Arts, Humanities & Social Sciences.

4. Choose from PSYC.4710 [https://www.uml.edu/catalog/courses/PSYC/4710], PSYC.4730 [https://www.uml.edu/catalog/courses/PSYC/4730], PSYC.4740 [https://www.uml.edu/catalog/courses/PSYC/4740], PSYC.4750 [https://www.uml.edu/catalog/courses/PSYC/4750], PSYC.4770 [https://www.uml.edu/catalog/courses/PSYC/4770].
A major in Psychology consists of 36-54 psychology credits with at least 18 credits at the 3000 level or higher. Students transferring to the college and wishing to major in Psychology must make individual arrangements with the department chairperson regarding satisfaction of major course requirements. To graduate with a concentration as part of the Psychology degree, student must have both an overall GPA and a Psychology GPA of at least a 3.0.

Core Curriculum Essential Learning Outcomes in the major are met as follows:

- Diversity and Cultural Awareness (DCA) is met by taking PSYC.2090 or PSYC.2550
- Information Literacy (IL) is met by taking PSYC.2690
- Social Responsibility and Ethics (SRE) is met by taking PSYC.47xx
- Written and Oral Communication (emphasizing Writing in the Discipline) (WOC) is met by taking PSYC.47xx
- Critical Thinking and Problem Solving (CTPS) is met by taking PSYC.3750
- Applied and Integrative Learning (AIL) is met by taking PSYC.3750
- Quantitative Literacy (QL) is met by taking PSYC.3690

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum policy for further details. You should meet with your faculty adviser to determine how you will meet the Core Curriculum requirements.

Advisement Report in SiS. If you need assistance, please contact your adviser.

Restriction on off-campus study:

Be advised that any course taken at another institution must be formally approved prior to enrollment. See the catalog policy for details.

Last updated: 3/15/2019

Current UMass Lowell students should be using their Advisement Report in SiS. If you need assistance, please contact your adviser.
PSYC.1010 Introduction to Psychological Science  
(Formerly 47.101) - Credits: 3  
An introduction course that focuses on application of the scientific method to major areas of psychology: biological, cognitive, developmental, social and personality, and mental and physical health. The course addresses the importance of social and cultural diversity, ethics, variations in human functioning, and applications to life and social action both within these areas and integrated across them. The research basis for knowledge in the field is emphasized.

PSYC.2010 Professional Development in Psychology  
(Formerly 47.201) - Credits: 1  
This course is intended for psychology majors to explore pathways to success as an undergraduate in psychology, especially including information about psychology as an empirical science, and careers and graduate school in psychology. Opportunities for research and service learning will be discussed. The course is required for all students who are planning to apply to one of the Concentrations in Psychology. (Prerequisite: 9 credits of coursework in Psychology)

PSYC.2090 Social Psychology (Formerly 47.209) - Credits: 3  
Presents an introduction to the study of social behavior in interpersonal relationships, groups, organizations, and the community: Diversity in regard to groups of peoples, cultures, and views is emphasized. Topics include non-verbal communication, social attraction, attitudes and attitude change, group dynamics, prejudice, labeling, stereotyping, interpersonal influence, and applications to social problems. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

PSYC.2320 Psychology of Personality (Formerly 47.232) - Credits: 3  
An introduction to the study of human personality. This course uses both theory and contemporary empirical evidence to examine approaches to understanding individual differences. Theoretical approaches include psychoanalytic, humanistic, cognitive, trait, type, and behavioral. Applications to topics such as self-concept, anxiety, adjustment, and achievement motivation will be considered.

PSYC.2550 Community Psychology (Formerly 47.255) - Credits: 3  
Surveys the field of community psychology, including principles of social justice, diversity, and social change. The course reviews historical antecedents, paradigms, conceptual models, strategies and tactics of social and community change and action; examples from selected contexts and social systems, including education, mental health, community organizations, the workplace, health care, justice system, and social services will be employed. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

PSYC.2600 Child and Adolescent Development  
(Formerly 47.260) - Credits: 3  
The developmental science of childhood and adolescence. Major theoretical perspectives, research methods, and ethical issues are presented with respect to prenatal development, infancy, childhood, adolescence, and the transition to adulthood. Empirical evidence for development in relevant contexts across biological, psychological, and social domains is examined.

PSYC.2690 Research I: Methods (Formerly 47.269) - Credits: 3  
An introductory course on the fundamentals of empirical research in psychological science. Instruction will promote understanding and competence in the basic vocabulary of psychological research, addressing information literacy, measurement, reliability, and validity in observed variables and unobserved constructs. Students will learn critical components of experimental, quasi-experimental, and correlational designs, as well as the basics of descriptive statistics, hypothesis and statistical testing, and matching design to analysis strategies. Students will demonstrate this knowledge through preparation of a research proposal. Finally, this course will provide students a strong basis from which to pursue advanced coursework in a variety of methodological approaches to psychological research. Meets Core Curriculum Essential Learning Outcome for Information Literacy (IL).

PSYC.2720 Abnormal Psychology (Formerly 47.272) - Credits: 3  
Presents an introduction to the study of various patterns of mental, behavioral, and personality disorders including diagnosis, etiology, and treatment. Current research-based theoretical approaches will be discussed as a means to gain a better understanding of psychological, biological, and sociocultural causes. Emphasis will be placed on the important notion that mental health problems are not only linked to individual factors, but also to family, community/social, cultural, societal, political, and historical factors.

PSYC.2730 Biological Psych (Formerly 47.273) - Credits: 3
Surveys issues and topics dealing with the physiological and evolutionary bases of behavior. Biological systems and processes that influence behavior are considered, with particular emphasis on brain mechanisms. Recent discoveries in the neurosciences will be presented. Methods of research are reviewed.

PSYC.2760 Theories of Learning (Formerly 47.276) - Credits: 3
This course provides an introduction to key concepts, theories, and experimental paradigms for studying learning and behavior in both human and non-human animals. Behavioral, cognitive, and physiological approaches are compared. You will learn about the scientific study of learning with an emphasis on how behavior changes as a function of experience. We will examine historical and current perspectives on a range of current issues of importance in the study of learning.

PSYC.2770 Sensation and Perception (Formerly 47.277) - Credits: 3
The course focuses on human sensations and perceptions. Students will examine how people know the objects and events of the world through hearing, seeing, smelling, tasting, moving, and touching. Students will also examine the foundations of experiences which correspond to independent measures of the world (veridical) and those which do not (illusory).

PSYC.2780 Cognitive Psychology (Formerly 47.278) - Credits: 3
Provides an introductory overview of the research on mental processes including but not limited to: attention, perception, memory, learning and decision-making. The course will also connect cognitive psychological research to other branches of study, as well as real world domains such as education, law, and health.

PSYC.3050 Psychology and Law (Formerly 47.305) - Credits: 3
This course is an introduction to many topics representing major fields of study within psychology and law. Topics may include: eyewitness testimony, lie detection, jury selection, child protection, forensic interviews, and the death penalty. In this course, students will be exposed to the diversity of interests among legal psychologists as well as innovative and important ideas, theories, and scientific research findings. Through readings, the study of actual cases, and presentations from guest speakers, students will gain more understanding of how psychologists study and contribute to the legal system.

PSYC.3080 Industrial/Organizational Psychology (Formerly 47.308) - Credits: 3
An introduction to the application of psychological principles and methods to the work domain. Students will develop an understanding of the individual, social, and environmental factors as they relate to organizational performance. Intended as an introduction to the field of Industrial/Organizational (I/O) Psychology, topics include personnel selection and evaluation, training and development, attitudes and motivation, leadership, group dynamics, diversity, organizational structure and climate, and job design and working conditions.

PSYC.3120 Learning and Behavior (Formerly 47.312) - Credits: 3
Examines various methods and techniques suitable for the modification of human behavior, based on the principles and findings of experimental studies of animal and human behavior. Considers how such methods can be used in education, mental health and corrections, and self-directed personal change.

PSYC.3280 Dynamics of Interpersonal Relations (Formerly 47.328) - Credits: 3
Presents an analysis of psychological dynamics in interpersonal behavior, emphasizing such topics as interpersonal communication, self-disclosure, personal styles of interaction and techniques of change. The primary focus is on the behavior of the students themselves.

PSYC.3320 History of Psychology (Formerly 47.332) - Credits: 3
Examines the historical roots of psychology from the pre-scientific psychologies of the ancient Greeks to the twentieth century schools of the introspectionists, the Gestalt psychologists, and psychoanalysts. Historical resolutions of recurring issues are contrasted with modern resolutions.

PSYC.3330 Psychology of Consciousness (Formerly 47.333) - Credits: 3
Introduces students to psychological theories and studies of the mind-body dualism, mind-brain identity, and the emergence of mind. Studies of psychosomatic disease and healing imagery, sleep and hypnosis, "subconscious" perception and "extra sensory" perception, multiple personalities and "split brain" patients are discussed. The questions of animal awareness and computer consciousness are also considered.

PSYC.3350 Psychology and Women (Formerly
47.335) - Credits: 3
Considers such topics as: the psychology of sex differences; biological bases of psychological sex differences; the nature of female sexuality; clinical theory and practice concerning women; women as mental patients and mental health consumers; implications for psychology and for women’s status.

PSYC.3360 Culture and Psychology (Formerly 47.336) - Credits: 3
Provides an analysis to the impact of culture, socio-historical, and social influences on psychological processes and outcomes. Students will also learn about techniques for studying the influence of culture including cross-cultural methods and population-specific methods. Through careful analysis of research literature, this class will examine a variety of contexts within the U.S. and internationally. Topics will include identity development, immigration, acculturation, socialization, and social interactions among groups.

PSYC.3370 Community & Social Change - Credits: 3
The course uses a community social psychology framework to help students envision and become active participants in community and social change processes. In this course, the term social change refers to intentional and active efforts to address social inequalities/oppresion and promote psychosocial wellbeing. We will define and analyze social problems using social justice and strengths-based approaches, understand and evaluate various community and social change strategies, and learn how to become effective change agents. These topics will be examined through intersecting lenses of race, ethnicity, culture, gender, class, sexualities, abilities, and globalization. Particular emphasis will be placed on conceptualizing and engaging in social change efforts alongside marginalized and historically underrepresented groups.

PSYC.3450 Health Psychology (Formerly 47.345) - Credits: 3
An examination of psychological aspects of human health, both physical and mental, and the processes of adjustment and growth. Consideration is given to the interplay of health and illness with emphasis on psychological methods of overcoming and preventing illness and of enhancing physical and emotional well-being.

PSYC.3520 Psychological Testing (Formerly 47.352) - Credits: 3
A survey of major tests and techniques used to assess cognitive abilities, personality and vocational interests; an introduction to the various professional settings in which testing and assessment methods are used (e.g. school/education, mental health, rehabilitation, employment and personnel selection, criminal justice). Students learn to administer, score, and interpret specific tests and learn how to develop a case study or report based on test data and related information.

PSYC.3550 Sport and Exercise Psychology (Formerly 47.355) - Credits: 3
The course will cover topics such as motivation, arousal and anxiety in performance, performance enhancement, youth sport and family interactions, leadership, cooperation and competition, team cohesion, gender issues, exercise and mental health, and psychological factors in injury prevention and rehabilitation.

PSYC.3600 Adult Development and Aging (Formerly 47.360) - Credits: 3
Begins with an overview of recent theoretical perspectives on adult development and aging. In chronological sequence, it presents the stages of adulthood and concludes with death and dying. Topics covered include personal, family, and vocational development through adulthood, gender pattern differences, and the impact of changing demographics, including the lengthening of the life span.

PSYC.3610 Developmental Psychopathology (Formerly 47.361) - Credits: 3
Examines behavior problems of childhood and adolescence across developmental transitions with a focus on the interaction of risk and protective factors in the child and his or her social context (e.g., family, school, friendships). Problems such as depression, anxiety, conduct disorder, ADHD, learning disabilities, and the consequences of trauma and maltreatment are addressed.

PSYC.3620 Psychology of Developmental Disabilities (Formerly 47.362) - Credits: 3
This course examines a range of developmental disabilities, their etiology, consideration of underlying brain function, assessment procedures, and current diagnostic, treatment and educational approaches. In addition, the impact of disability on individuals and the families of those affected, cultural and social aspects of disability, and current practices in service provision will be considered.
PSYC.3630 Introduction to Disability Studies (Formerly 47.363) - Credits: 3

This course provides students with a wide range of interests and backgrounds with the opportunity to examine their own mental model (attitudes/values/assumptions) of disability. It includes an overview of the nature of intellectual disability and other disabilities and it provides opportunities to explore and understand the historical social response to disability. Students will look at a range of strategies for providing support and intervention and they will learn about how to effect change through a variety of strategies, including advocacy.

PSYC.3640 Family Systems - Credits: 3

This course presents a systems model in considering families as they influence, and are influenced by, their members. We will explore theoretical foundations and examine empirical evidence to consider a variety of family systems, structures, and dynamics in the social context and across development, including topics such as culture, gender, sexual orientation, socioeconomic status, disability, foster care, adoption, education, work, and community.

PSYC.3680 Psychology of Decision-Making - Credits: 3

We spend billions of dollars every year to address issues caused by poor decisions: jurors convict innocent defendants, employees do not adequately contribute to retirement accounts, young adults smoke cigarettes, etc. Why do people make irrational decisions? This course will provide a comprehensive overview of decision making with an emphasis on applying psychological theory and research to tackle issues in the areas of law, economics, health, etc. Students will learn theoretical concepts to improve their own decision-making as well as help them to positively influence the decisions of others.

PSYC.3690 Research II: Statistics (Formerly 47.369) - Credits: 3

An intermediate level course building on competence in quantitative reasoning skills and the fundamentals of research methods, and focusing on descriptive and inferential statistics and their application and interpretation. The course will include basic computational approaches; the primary goal is for students to develop the ability to articulate and apply statistical concepts, and communicate statistical results. The course includes topics in basic inferential statistics from z-scores up to and including chi-square and factorial ANOVA. Students will learn to use a database and conduct statistical analyses using standard software packages. Meets Core Curriculum Essential Learning Outcome for Quantitative Literacy (QL).

PSYC.3720 Comparative Psychology: Animal Behavior (Formerly 47.372) - Credits: 3

Comparative psychology is a discipline that explores the behavior of animals, both human and non-human, using evolutionary theory as a unifying principle. The contributions of evolutionary pressures, genetics, development, learning, and social influence will be explored in variety of animal species and cross-species comparisons made where appropriate. Specific topics covered will include causes and development of behavior, control and organization of behavior, behavioral adaptations, mating systems and reproduction, parental care, defensive behaviors, aggression, foraging, communication, and animal cognition. Students will be required to complete a behavioral observation of a non-human species by traveling to a local zoo or using another live animal observation approach approved by the instructor. (e.g., a zoo’s live animal webcam).

PSYC.4690 Research III: Laboratory (Formerly 47.375 and PSYC.3750) - Credits: 3

An advanced course in which students design and carry out an empirical research project from start to finish, resulting in an individually written research report using APA style and an oral presentation. The primary goal is for students to experience discovery by completing an original study that reasonably extends the prior research literature. Topics may vary, reflecting the interests of the instructor. Students will perform literature reviews; formulate a research question; operationalize variables; develop study designs; obtain ethical review and approval; and collect, analyze, and interpret data. Students will also demonstrate knowledge of the research process in assessments that may include assignments, quizzes, or exams. Meets Core Curriculum Essential Learning Outcome for Applied & Integrative Learning (AIL) and Critical Thinking & Problem Solving (CTPS).

PSYC.4710 Seminar in Community Psychology - Credits: 3

An advanced seminar to consider special topics in community psychology with special focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. Specific topics will vary and may include such topics as racism, diversity, empowerment, and social change in the context of social and community life. This is a writing intensive course.

PSYC.4711 Seminar in Community Psychology: Racism - Credits: 3

An advanced seminar to consider special topics in community psychology with focus on critique of the theoretical and
empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. The topic of this seminar is racism. In this course we will investigate roots of racism, kinds of racism, reasons for perpetuation of racism, possible solutions to ending racism. Many believe that racism is a thing of the past. Yet, research shows that many of us are unconsciously racist and hurt communities of color without any malicious intent. We will explore our own postings in terms of racism. This is a writing-intensive course.

PSYC.4712 Seminar in Community Psychology: Immigration - Credits: 3
An advanced seminar to consider special topics in community psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. The topic of this seminar is immigration, a very important issue in the United States and around the world. In this seminar we will study the complex process of migration from a community social psychological point of view. Motivations, expectations, acculturation, immigrant status, deportations, policy and more will be covered. This is a writing-intensive course.

PSYC.4713 Seminar in Community Psychology: Prevent Youth Violence - Credits: 3
An advanced seminar to consider special topics in community psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. The topic of this seminar is youth violence, which continues to be a major public health concern in the United States. Preventing youth violence is an important component of creating peaceful and safe neighborhoods and just communities. In this course, we will use ecological and multicultural perspectives to understand different types of youth violence, the contexts in which they occur, and intervention strategies to address the violence. This is a writing-intensive course.

PSYC.4714 Seminar in Community Psychology: Bridging Differences - Credits: 3
An advanced seminar to consider special topics in community psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. This course explores dilemmas that can emerge when working to bridge diverse groups in community-based work. The seminar will be organized around narratives that address multiple dimensions of diversity including race, ethnicity, gender, class, sexual orientation, disability, and religion. Too often, guidelines for addressing very complex diversity dynamics are presented as neatly packaged lists of recommendations. However, it is within the stories of the challenges and dilemmas that the complexity of the political, historical, social, and psychological dynamics of diversity are most evident. Students will explore examples of everyday diversity challenges and utilize psychological theories to better understand how the challenges can be shaped by struggles over limited resources, deep historical conflicts between groups, privilege dynamics, intragroup dynamics, organizational cultural norms, and/or other issues. This is a writing-intensive course.

PSYC.4720 Seminar in Personality Psychology (Formerly 47.472) - Credits: 3
Focuses on a variety of theoretical conceptualizations of the productive personality, psychodiagnostic tools and techniques and case histories. Students develop and enhance their professional skills with respect to presentation of self, writing, and psychological diagnostic techniques.

PSYC.4730 Seminar in Social Psychology (Formerly 47.473) - Credits: 3
An advanced seminar to consider special topics in social psychology, with special focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. Specific topics will vary and may include such topics as social aspects of health and illness; inequalities in education; the impact of globalization; attitude formation and prejudice; and psychology of sex roles. This is a writing intensive course.

PSYC.4731 Seminar in Social Psychology: Social (In)justice - Credits: 3
An advances seminar to consider special topics in social psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. The topic of this seminar is social injustice, its causes, manifestations, explanations, and social psychological theories that help us understand them. We will explore how and why social injustice prevails in today’s world full of resources; why small number of people own majority of world’s wealth; why some countries are poorer than others. We will study our own standpoints and where they come from and we will work on possible remedies that could lead to a more just world.

PSYC.4732 Seminar in Social Psychology: Achievement Motivation - Credits: 3
An advanced seminar to consider special topics in social psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. This course will cover psychological theory and research on the various factors that explain people's motivation to achieve and their performance in different domains. These factors include emotions, needs, personality, efficiency, group membership, identity, goal type, and context. Course goals include honing students' ability to understand, critique, write about, and discuss theoretical and empirical papers within psychology. Students will also develop their skills in generating testable hypotheses. This is a writing-intensive course.

PSYC.4733 Seminar in Social Psychology: the Mind-Body Perspective in Communication - Credits: 3
An advanced seminar to consider special topics in social psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. This seminar will focus on the role communication processes (including Intra-Personal, interpersonal, and Mediated-Communication) play in a variety of health related contexts, effects, and processes. Included will be: Self-regulation theories; placebo and nocebo effects; unconscious processes; biofeedback effects and mechanisms; hypnosis; imagery; pain management; emotion regulation; well-being; and the ability to consciously influence autonomic processes such as the immune and endocrine systems. This is a writing-intensive course.

PSYC.4734 Seminar in Social Psychology: Health Campaigns - Credits: 3
An advanced seminar to consider special topics in social psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. This seminar will review the state of the science and art of effective medial health campaigns in light of how they are developed, delivered, and evaluated. Seminar participants will critically analyze campaigns relative to their effects on health-related awareness, knowledge, attitudes, and behaviors. This is a writing-intensive course.

PSYC.4735 Seminar in Social Psychology: Workplace Diversity - Credits: 3
An advanced seminar to consider special topics in social psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. Over the course of our lives, many of us will be working in organizations that include diverse workers, and thus it is important to understand the issues that shape interpersonal and system dynamics within such settings. In this seminar, we review theories and research relevant to how race, ethnicity, class, gender, sexual orientation, and disability dynamics affect workplace systems. Classes will be highly interactive and discussion-oriented as students learn about the challenges diverse organizations face in fostering positive working relationships and about strategies adopted to enhance the effectiveness of the diverse workplace. This is a writing-intensive course.

PSYC.4736 Seminar in Social Psychology: Psychology of Sustainability - Credits: 3
An advanced seminar to consider special topics in social psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. In this course we will explore unequal distribution of resources and power and the culture of consumerism in all parts of the world, including the United States. Once people are aware can make informed choices about what and why and how much they buy, about the companies that produce and sell the products and the political views they support. This is a writing-intensive course.

PSYC.4740 Seminar in Developmental Psychology (Formerly 47.474) - Credits: 3
An advanced seminar to consider special topics in developmental psychology, with special focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. Specific topics will vary and may include such topics as psychology of the family and parent-child relations; infant development; adjustment during adulthood; and death and dying. This is a writing intensive course.

PSYC.4741 Seminar in Developmental Psychology: Adolescent Identity - Credits: 3
An advanced seminar to consider special topics in developmental psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. This seminar will explore the phenomenon of adolescent identity development, beginning with Erik Erikson's seminal work on the subject and continuing through contemporary treatments. We will examine development of identity from extended consciousness, a sense of autobiographical self (1-2 years), to a theory of mind (4-5 years), conception of a personal fable (10-14 years), and the emergence of full life stories (17-25 years).
Specific issues of focus will include ethnic, social class, and gender role identity development, identity crises and resolutions, and representations of relationships with family, friends, school, and work. Students will write and analyze their own life stories, as well as lead discussions, and prepare a research paper. This is a writing-intensive course.

**PSYC.4742 Seminar in Developmental Psychology: Psychology of Education - Credits: 3**

An advanced seminar to consider special topics in developmental psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. This seminar takes an intensive look at the psychology of education and of learning. We will read about theories of education, research on learning, and study some historical and current trends in both formal education (school) and informal learning environments (hobby subcultures, museums, camps, etc). Readings will include both historical examples (John Dewey, Jane Addams, Paolo Freire) and schooling systems, and policymakers in higher education. In addition to reading, class discussion, and engaging hands on exercises, students will plan and deliver a term-length creative project on the psychology of learning and education. This is a writing-intensive course.

**PSYC.4743 Seminar in Developmental Psychology: Trauma in Child Development - Credits: 3**

An advanced seminar to consider special topics in developmental psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. Trauma is a relatively common experience of childhood. Far too many children and youth in the US are witnesses to domestic violence and victims of abuse, neglect, and other violent crimes. Worldwide, millions of children have been disabled, injured, orphaned, or recruited as child soldiers in armed conflicts. When natural disasters strike, children are often among those affected most severely. How do these experiences influence subsequent growth and development? This seminar examines the role of trauma in child development form an ecological perspective with a focus on neurophysiological, affective, and relational systems. This is a writing-intensive course.

**PSYC.4750 Seminar in Clinical Psychology (Formerly 47.475) - Credits: 3**

An advanced seminar to consider special topics in clinical psychology, with special focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. Specific topics will vary and may include such topics as health psychology and behavioral medicine; the nature and causes of or interventions for specific psychological disorders (e.g., autism spectrum disorder, schizophrenia); the community mental health movement; clinical methods of assessment. This is a writing intensive course.

**PSYC.4751 Seminar in Clinical Psychology: Women’s Health - Credits: 3**

An advanced seminar to consider special topics in clinical psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. Physical health and illness do not occur in a vacuum. Rather, they are embedded in a complex and dynamic system. This biological (e.g., disease process), psychological (e.g., mental health status) and social (e.g., culture) factors. Topics will include reproductive health, cardiovascular illness, substance use, and eating behaviors. Sexual orientation, race, socioeconomic status and other issues of diversity will be integrated throughout the semester. Students will learn from reading and discussing scholarly articles and book chapters, critically watching relevant videos, and writing individual literature review papers. This is a writing-intensive course.

**PSYC.4752 Seminar in Clinical Psychology: Autism - Credits: 3**

An advanced seminar to consider special topics in clinical psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. Autism spectrum disorder (ASD) is a complex neurological disorder that typically appears before the age of three and immediately and profoundly affects a young child's ability to communicate, develop language, form social relationships and respond appropriately to environmental cues. Over the last 15-20 years, autism has received an increasing level of attention in both scientific arenas and the popular press. Most recent estimates are that about 1 in 50 children are affected. This seminar will examine issues in the etiology, characteristics and treatment of autism and related developmental disabilities. The seminar will also explore some of the more prominent theories and controversies surrounding these disorders. Much of the seminar will be focused on a behavioral approach to understanding and treating children with autism and significant intellectual challenges. This is a writing-intensive course.

**PSYC.4753 Seminar in Clinical Psychology & Behavioral Medicine - Credits: 3**

An advanced seminar to consider special topics in clinical psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. Specific topics will vary and may include such topics as health psychology and behavioral medicine; the nature and causes of or interventions for specific psychological disorders (e.g., autism spectrum disorder, schizophrenia); the community mental health movement; clinical methods of assessment. This is a writing intensive course.
psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. This course examines physical health and illness by integrating information about biological processes, psychological characteristics, and social contexts. We will discuss the following topics throughout the course: the roles of personality, emotion, mental health, and human development in physical well-being; the relationship between health psychology and other disciplines such as nursing, anthropology and genetics; the significance of prevention and public policy in physical health; and the ways in which health psychology is important in a variety of health problems, such as heart disease, cancer, and obesity. This is a writing-intensive course.

PSYC.4754 Seminar in Clinical Psychology: Language Assessment and Intervention in Autism - Credits: 3

An advanced seminar to consider special topics in clinical psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. This course is designed to provide students with a working knowledge of behavioral language assessments and empirically validated interventions to improve language and communication for young children with autism and related disabilities. Successful completion of the course will help prepare students for a position as a behavior technician. Students will participate in class discussions, presentations, and application activities throughout the semester. This is a writing-intensive course.

PSYC.4755 Seminar in Clinical Psychology: Autism in Adolescents & Young Adults - Credits: 3

An advanced seminar to consider special topics in clinical psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. This seminar will focus on adolescents and young adults on the "high-functioning" end of the autism spectrum. Students will learn the behavioral and psychological characteristics associated with this population, diagnostic procedures, etiology, consider various interventions for this population, and discuss current controversies in the field. We will also consider the impact of autism spectrum disorders (ASD) on individual and their families. This is a writing-intensive course.

PSYC.4756 Seminar in Clinical Psychology: Sexual Offending - Credits: 3

An advanced seminar to consider special topics in clinical psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. The purpose of this course is to examine current psychological theory and research relating to the causes and consequences of sexual aggression. It is designed to acquaint you with some of the key issues, questions, and findings in this field, as well as to allow you to develop some of the critical skills needed by research psychologists. The course is organized topically. We begin by reading and thinking about the social construction of masculinity and femininity (especially through representations in the media) and how these constructions might contribute to sexual aggression. The bulk of the course is devoted to an examination of psychological processes related to victimization and perpetration. The course concludes with a discussion of several special topics and an examination of rape prevention and education. Special topics may include a focus on juvenile and female offenders, specific risk factors for perpetration, campus sexual assault, pedophilia, child maltreatment, pornography, recidivism rates, offender laws, and victim testimonies. This is a writing-intensive course.

PSYC.4770 Seminar in Contemporary Trends (Formerly 47.477) - Credits: 3

An advanced seminar to consider current trends in psychology, with special focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. Specific topics will vary and may include such topics as contemporary models of addictive behavior; the interaction of psychology and law; existential psychology; psychology of technological change. This is a writing intensive course.

PSYC.4771 Seminar in Contemporary Trends: Addictions - Credits: 3

An advanced seminar to consider special current topics in psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. The focus of this seminar is on the psychology of addictions. Drawing upon current theory and research, we will look at the nature and causes of the problem behaviors associated with alcohol and drug use. We will also consider whether problems in such areas as shopping, eating, gambling, sex, video games, and the Internet can be understood as forms of addictions. In addition, we will examine the implications of whether or not such addictions should be viewed as diseases, and we will evaluate the relative importance of biological, psychological and socio-cultural factors. This is a writing-intensive course.

PSYC.4772 Seminar in Contemporary Trends: Psychology & Law - Credits: 3
An advanced seminar to consider special current topics in psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. This course is designed to give you an in-depth look into the impact of cognitive psychology on education. We will look at basic processes, including those of attention, memory, and motivation, starting first from basic theoretical principles. We will then read papers that have taken these theoretical principles as a starting point and applied them to real-life issues in education, such as exam performance and students’ self-evaluations of their own performance. This is a writing-intensive course.

PSYC.4781 Seminar in Cognitive Psychology: Educational Applications - Credits: 3

An advanced seminar to consider special topics in cognitive psychology with focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. Specific topics will vary and may include such topics as conceptual issues in behavioral psychology; applied behavior analysis; and the applications of cognitive psychology to education. This is a writing intensive course.

PSYC.4790 Seminar in Behavioral Psychology - Credits: 3

An advanced seminar to consider special topics in behavioral psychology, with special focus on critique of the theoretical and empirical literature, identification of future research pathways, and the potential for application with consideration of ethics and social responsibility. Specific topics will vary and may include such topics as conceptual issues in behavioral psychology; applied behavior analysis; and the applications of behavioral psychology to education, language, symbolic behavior, and attention. This is a writing intensive course.

PSYC.4800 Concentration Practicum I (Formerly 47.480) - Credits: 3

This is the first course in a two-course sequence that accompanies that required field placement for undergraduate psychology majors who are registered in a concentration. Practicum I must be taken before Practicum II. The accompanying field placement may either be a research or a service practicum. This is a general course, which will fulfill the requirement for students in any concentration. The course will focus integrating student placement experiences with relevant empirical literature. Topics will draw on the research literature to frame the placement experience and will include working in diverse environments, becoming aware of organizational
This course provides a critical examination of the nature of setting for people with an intellectual/developmental disability. Fieldwork within a human service organization or educational setting (half the classes meet in person, half online) will be 60 hours of best practices. The foundation for this blended learning course underpinning the realization of experiences in field placements with these standards, seeking to understand the forces that support or interfere with realizing practice within human services and compare the science of psychology to the placement, and writing informally and formally about placement experiences.

PSYC.4810 Concentration Practicum II (Formerly 47.481) - Credits: 3

This is the second course in the two-course sequence that accompanies the required field placement for undergraduate psychology majors who are registered in a concentration. This course can only be taken after the successful completion of PSYC.4800 Concentration Practicum I, in the previous term. The field placement may either be a research or a service practicum. This is a general course, which will fulfill the requirement for students in any concentration. The second course will focus developing a research paper that integrates the empirical literature with the placement experience. The course will continue to focus on topics including working in diverse environments, working within organizations, responding to work related stress, understanding how the science of psychology applies to the placement, and writing informally and formally about placement experiences.

PSYC.4820 Dvptl Disabilities Fieldwork: Service Provision - Credits: 3

In this fieldwork course we explore standards for support and service provision within human services and compare experiences in field placements with these standards, seeking to understand the forces that support or interfere with realizing best practices in disability services. The foundation for this blended learning course (half the classes meet in-person, half online) will be 60 hours fieldwork with an individual with an intellectual/developmental disability. This course integrates course material with field placement experiences through presentation, discussion, group work, case study, and video materials that address course objectives. Each student will have the time to develop an understanding of a person with IDD, and how individualized planning can facilitate social inclusion.

PSYC.4830 Dvptl Disabilities Fieldwork: Leadership & Advocacy - Credits: 3

In this fieldwork course we explore standards for support and service provision within formal services and compare experiences in field placements with these standards, seeking to understand the forces that support or interfere with realizing best practices. The foundation for this blended learning course (half the classes meet in-person, half online) will be 60 hours of fieldwork within a human service organization or educational setting for people with an intellectual/developmental disability. This course provides a critical examination of the nature of organizations and the impact of leadership and advocacy on the lives of people with disabilities through integrating course material with fieldwork experiences through presentation, discussion, group work, case study, and video materials.

PSYC.4860 Community Service Learning (1, 2, or 3 credits) (Formerly 47.486/586) - Credits: 1-3

Students will take an applied role in the community where they will have the opportunity to provide some form of meaningful service to individuals, groups or communities. Students will meet regularly with a designated faculty member on campus to consider their experiences in the context of current psychological thought. In some instances, the commitment to community service may extend over the course of a full year. Graded as Satisfactory or Unsatisfactory. 1, 2 or 3 credits. This course may be repeated but no more than 12 credits total from any combination of PSYC.4860, PSYC.4880 and PSYC.4910 may be counted toward the degree.

PSYC.4880 Research Service Learning (Formerly 47.488) - Credits: 1-3

Students will take an applied role in faculty supervised research where they will provide a meaningful contribution to a research program or particular study. Students will meet regularly with a designated faculty member to discuss the research process and rationale for relevant components of the project including literature review, research design, procedures, data collection, entry, and analysis. In some instances the commitment to research may extend over the course of a full year. Graded as Satisfactory or Unsatisfactory. 1, 2, or 3 credits. This course may be repeated but no more than 12 credits total from any combination of psyc.4860, PSYC.4880, and PSYC.4910 may be counted toward the degree.

PSYC.4910 Directed Study: Psychology (Formerly 47.491) - Credits: 3

Through frequent consultation with the instructor, the student carries out the investigation of a particularly specialized area of interest. This course may be repeated, but no more than 12 credits total from any combination of PSYC.486, PSYC.488, and PSYC.491 may be counted toward the degree.

PSYC.4920 Undergraduate Thesis in Psychology I - Credits: 3

For undergraduate students actively engaged in research leading toward the submission of a written thesis. Under faculty supervision, students will conceptualize and conduct an original, empirical study, refining and sharpening their research, presentation, and writing skills. A program of supervised work will be arranged between the student and a
faculty supervisor, leading to the completion of an introduction and literature review, research plan, and IRB proposal.

PSYC.4930 Undergraduate Thesis in Psychology II -
Credits: 3

For undergraduate students actively engaged in research leading toward the submission of a written thesis. Under faculty supervision, students will conceptualize and conduct an original, empirical study, refining and sharpening their research, presentation, and writing skills. A program of supervised work will be arranged between the student and a faculty supervisor, leading to the completion and presentation of a written thesis.

PSYC.4960 Practicum in Psychology (Formerly 47.496) - Credits: 3

A program of practical experience for Psychology majors only. Specific requirements vary, but the Practicum experience enables Junior and Senior level students to work and study in a variety of areas related to psychological practice and research (mental health agencies, community agencies and groups, work settings, schools, prisons, group homes, etc.). Students meet regularly as a class on campus with the designated instructor to discuss their experiences and to learn more about the settings in which psychologists practice and the challenges that psychologists confront. Practicum may be repeated for a maximum of nine credits. Graded Satisfactory or Unsatisfactory. (Field Placement Required)

PSYC.6921 Directed Study in Applied Behavior Analysis I - Credits: 1-3

This directed study will serve as a bridge course for students who are seeking certification as Board Certified Behavior Analysts (BCBA) and who have completed some or all coursework in one of UMass Lowell’s certificates in Applied Behavior Analysis, but do not have all of the required content hours to sit for the BCBA exam. The directed study will assist them in gaining mastery of a designated set of content hours that they are missing.
Minor

A minor in Criminal Justice will provide students with knowledge of the different components of the criminal justice system (the police, the courts, and corrections), and about the different stages in the criminal justice process. Students will also develop an understanding of the different etiological bases and patterns of crime and the relationship between the causes of crime and the social control apparatus. All criminal justice courses seek to instill critical thinking, the importance of ethical decision making and an understanding of diversity.

The minor in Criminal Justice requires six courses (18 credits), including four lower-level courses which are also required for majors.

Required Courses (12 credits)

- CRIM.1010 (https://www.uml.edu/catalog/courses/CRIM/1010) The Criminal Justice System
- CRIM.1410 (https://www.uml.edu/catalog/courses/CRIM/1410) Introduction to Policing
- CRIM.1510 (https://www.uml.edu/catalog/courses/CRIM/1510) Introduction to Corrections
- CRIM.2210 (https://www.uml.edu/catalog/courses/CRIM/2210) Criminology

Electives Courses (6 credits)

Choose two of the following upper-level courses:

- CRIM.3230 (https://www.uml.edu/catalog/courses/CRIM/3230) White Collar and Elite Deviance
- CRIM.3260 (https://www.uml.edu/catalog/courses/CRIM/3260) Hate Crime
- CRIM.3270 (https://www.uml.edu/catalog/courses/CRIM/3270) Violence in America
- CRIM.3420 (https://www.uml.edu/catalog/courses/CRIM/3420) Criminal Profiling
- CRIM.3430 (https://www.uml.edu/catalog/courses/CRIM/3430) Forensic Psychology
- CRIM.3600 (https://www.uml.edu/catalog/courses/CRIM/3600) Gender, Race, and Crime
- CRIM.3850 (https://www.uml.edu/catalog/courses/CRIM/3850) Crime and Mental Illness
- CRIM.3870 (https://www.uml.edu/catalog/courses/CRIM/3870) Criminal Mind and Behavior
- CRIM.3880 (https://www.uml.edu/catalog/courses/CRIM/3880) Criminal Psychopathology
- CRIM.4010 (https://www.uml.edu/catalog/courses/CRIM/4010) Substance Abuse and Crime
- CRIM.4220 (https://www.uml.edu/catalog/courses/CRIM/4220) Victimology
- CRIM.4770 (https://www.uml.edu/catalog/courses/CRIM/4770) Intimate Partner Violence

College of Fine Arts, Humanities & Social Sciences

Degree Pathways are a sample semester-by-semester sequence of courses which might be followed for successful completion of a degree, diploma, credential or certificate from the university. Students should follow the degree pathway appropriate to their catalog year. A students catalog year is typically defined by the date of their entry into the University of Massachusetts Lowell.

Total Minimum Credits = 120

1. Required for all entering freshmen; not required for those who transfer to UMass Lowell or into the Criminal Justice major.
2. Free electives must be from departments other than Criminal Justice.

**Notes:**

- Criminal Justice majors must maintain a 2.5 Criminal Justice GPA to remain in the major and an overall GPA of 2.2.
- Criminal Justice majors need a minimum of 36 credits and cannot exceed 60 credits in Criminal Justice.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum policy for further details. You should meet with your faculty adviser to determine how you will meet the Core Curriculum requirements. Current UMass Lowell students should be using their Advisement Report in SiS (http://www.uml.edu/enrollment/sis/default.aspx). If you need assistance, please contact your adviser.

**Restriction on off-campus study:**

Be advised that any course taken at another institution must be formally approved.

**Total Minimum Credits = 120**

1 Required for all entering freshmen; not required for those who transfer to UMass Lowell or into the Criminal Justice major.

2 Free electives must be from departments other than Criminal Justice.

**Notes:**

- Criminal Justice majors must maintain a 2.5 Criminal Justice GPA to remain in the major and an overall GPA of 2.2.
- Criminal Justice majors need a minimum of 36 credits and cannot exceed 60 credits in Criminal Justice.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) policy for further details. You should meet with your faculty adviser to determine how you will meet the Core Curriculum requirements.

Current UMass Lowell students should be using their Advisement Report in SiS (http://www.uml.edu/enrollment/sis/default.aspx). If you need assistance, please contact your adviser.

**Restriction on off-campus study:**

Be advised that any course taken at another institution must be formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the catalog policy (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

Last updated: 7/09/2021
CRIM.1010 The Criminal Justice System (Formerly 44.101) - Credits: 3

This course presents a brief history of the Criminal Justice System and an analysis of its structure and function. This course required of all CJ majors and is a prerequisite for all other courses in criminal justice. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

CRIM.1150 Introduction to Homeland Security (Formerly 44.115) - Credits: 3

This course will encompass the study and relationship between those entities and institutions necessary for the protection of the United States. Course instructional material will examine the components of Federal, State and Local Police Agencies, as well as the role of Private Security and Emergency Responders needed to facilitate the implementation of the Homeland Security Act. Particular attention will be focused on Policy, Plans and Procedures at governmental and community levels.

CRIM.1410 Introduction to Policing (Formerly 44.141) - Credits: 3

This course provides an examination of the historical development of police work with special emphasis on the conflicting role expectations facing police officer.

CRIM.1510 Introduction to Corrections (Formerly 44.151) - Credits: 3

This course provides an overview of the American correction system including the history of corrections, probation, incarceration, community corrections, the prison experience and release.

CRIM.2010 Systemic Issues in Criminal Justice - Credits: 3

This course is designed to introduce students to the latest innovations in the applications of new technological advances in the criminal justice system. Topic areas include an examination of the new technology of crime commission, and the corresponding new technology of crime control strategies. Our focus will be on the application of both "hard" technology (e.g. equipment, hardware, devices, etc.) and "soft" technology (e.g. computer software programs, information systems, classification devices, and other problem-solving applications) in each of the following areas: crime prevention, police, courts, institutional corrections, community corrections and the private sector.

CRIM.2120 Weapons of Mass Destruction (Formerly 44.212) - Credits: 3

This course will center on Weapons of Mass Destruction (WMD) and their potential use by terrorists to obtain their goals. We will explore the origins, development and weaponization of Chemical, Biological, Nuclear and Radiological Systems and Devices. The course content is designed particularly for the First Responder to such incidents of WMD. The class will focus on the preparation and execution of plans and policies to counter this threat.

CRIM.2130 Emergency Management (Formerly 44.213) - Credits: 3

The purpose of this course is to introduce the student to the various ways in which a corporation and local municipality can plan for a disaster before it occurs. Topics covered include risk identification and assessment of multi-hazards whether natural and man-made, violence in the workplace, development of crisis and disaster incident management programs, and business/agency continuation planning.

CRIM.2210 Criminology (Formerly 44.221) - Credits: 3

The definition and nature of crime, criminal statistics, and theories of crime causation are included. Required of all CJ majors.

CRIM.2230 Crime and the Media (Formerly 44.223) - Credits: 3

This course provides an overview about how the media portrays crime and its impact on the general public, crime, and victims and offenders.

CRIM.2330 Criminal Procedure (Formerly 44.233) - Credits: 3

Examines the rules that govern the everyday operation of the
criminal justice system from investigation to sentencing and appeal. Topics include: Investigation, arrest, search and seizure, interrogation, pretrial detention and hearings, plea bargaining, trial procedures, sentencing, and appeals.

CRIM.2340 Criminal Law (Formerly 44.234) - Credits: 3

The historical origins and development of criminal law from the early common law to contemporary decisions and statutes. Constitutional and statutory factors as they pertain to criminal responsibility, capacity, crimes against persons and property, defenses to criminal charges and sentences. Sections of the Massachusetts Criminal Code and other statutes will be covered where applicable.

CRIM.2350 Introduction to the Law and Politics of Constitutional Development (Formerly 44.235) - Credits: 3

A course examining American constitutional doctrine as it has developed historically through the process of constitutional adjudication.

CRIM.2410 Physical Security (Formerly 44.241) - Credits: 3

The basic principles of physical security with emphasis on tailoring these principles to the protection of specific operations and facilities. Proper planning, appropriate design, and use of modern techniques and devices to enhance security while reducing costs are discussed.

CRIM.2430 Criminalistics I (Formerly 44.243) - Credits: 3

This laboratory course will cover basic procedures in arrest, search and seizure, and the gathering and evaluation of evidence as to admissibility, weight, and competence.

CRIM.2440 Criminalistics II (Formerly 44.244) - Credits: 3

This course is a continuation of Criminalistics I. It is intended to familiarize the student with various types of physical evidence that can be found at the more violent crime scenes. Methods of identification, preservation, collection and analysis of physical evidence relating to specific criminal activities shall be stressed. Topics shall include Bloodstain Pattern Analysis, DNA Typing, Crime Scene Reconstruction, Point of Origin Determination and evidence associated with Death Investigations, Sexual Assaults, Bombings, Arsons, Motor Vehicle Homicides, Robberies and Burglaries.

CRIM.2480 Terrorism (international and domestic) (Formerly 44.248) - Credits: 3

This course acquaints the Criminal Justice student with the concept of terrorism at both the international and domestic levels. Topics include the history of terrorism, terrorism today and terrorism in the future. Counter measures taken to respond to terrorist threats are also examined.

CRIM.2610 Juvenile Delinquency (Formerly 44.261) - Credits: 3

An examination of causative factors in the development of youthful offenders and the development and philosophy behind treatment and rehabilitative practices.

CRIM.2800 Criminal Justice Ethics (Formerly 44.280) - Credits: 3

CRIM.2910 Short Study Abroad: Selected Topics (Formerly 44.291) - Credits: 6

This is a short study abroad course, usually 3 weeks in duration. Topic and location vary.

CRIM.3120 Security Management (Formerly 44.312) - Credits: 3

Addresses the basic interdisciplinary principles of security management including planning, budgeting, organizing, staffing, directing, and controlling. This course will also cover marketing security services to management, risk management, civil and criminal liability, and labor relations. Each aspect of the course is designed to prepare security managers to face the new challenges as broader and more cost-effective protection is required with fewer resources. The course will also bring about greater awareness and understanding of the various options available in security and loss control. It will identify a number of risk areas and outline various deterrent and preventative methods.

CRIM.3230 White Collar and Elite Deviance (Formerly 44.323) - Credits: 3

This course will provide an overview of white collar crime including white collar, corporate, occupational, workplace, and organized crime.

CRIM.3260 Hate Crime (Formerly 44.326) - Credits: 3

This course examines prejudice as a motivation for criminal behavior. The criminological theory for hate crime is reviewed,
as well as historical perspectives of this crime category.

CRIM.3270 Violence in America (Formerly 44.327) - Credits: 3

This course provides students with an in-depth analysis of the courses, context, and control of a wide range of violent crimes.

CRIM.3420 Criminal Profiling (Formerly 44.342) - Credits: 3

This course provides an overview of the development and character of the many types of offenders who become criminal psychopaths. The course explores the various methods used in classifying and predicting criminal behavior derived from the field of Criminology, Psychology and Forensic Science.

CRIM.3430 Forensic Psychology (Formerly 44.343) - Credits: 3

This course examines the application of psychological theories, principles, and research to issues of concern to the criminal justice system.

CRIM.3450 The Role of Women in Terrorism and War - Credits: 3

This interdisciplinary course will examine the gendered processes of war, sub-state violence, counter-terrorism/insurgency and conflict resolution. More specifically, we will review relevant conceptual and theoretical frameworks which focus on the relationships between gender, armed conflict and conflict resolution. In addition, we will examine the strategies used by women’s and feminist movements to promote specific security related policy. The class will explore cases from Africa, the Americas, Asia, Europe, and the Middle East and North Africa.

CRIM.3460 Critical Infrastructure Protection (Formerly CRIM 346) - Credits: 3

This course provides an overview on critical infrastructure and the protection. The course will cover the concept and components of the country’s critical assets and threat environment; federal government plans and how public-private partnership protection efforts are leveraged; and strategies and methods of protecting critical infrastructure.

CRIM.3470 Police Innovations (Formerly 44.347) - Credits: 3

This course is concerned with contemporary efforts to change police agencies, particularly in the United States. Contemporary reform revolves mainly around what we now know as “community policing” and this course will dwell at some length on these initiatives. Other innovations, some of which may complement community policing, and all of which are narrower in scope, are also considered.

CRIM.3480 Advanced Seminar on Weapons of Mass Destruction and Terrorism (Formerly 44.348) - Credits: 3

This course will examine the scientific and technological details of chemical, biological, radiological and nuclear (CBRN) weapons; the proliferation of these weapons and international CBRN prevention efforts (like the Nuclear Nonproliferation Treaty, the Chemical Weapons Convention, and the Biological Weapons Convention); and the threat of terrorist groups seeking to acquire and use CBRN weapons, and explore ways to improve our response to this complex threat.

CRIM.3490 Intelligence & National Security (Formerly 44.349) - Credits: 3

This course is designed to provide students with an understanding of how the U.S. intelligence community functions, where it fits in the policy making and law enforcement systems of U.S. democracy, and its role in the protection of national security.

CRIM.3500 Institutional Correction (Formerly 44.350) - Credits: 3

This course provides an in-depth examination of the history, function, structure, and operation of American adult and juvenile correctional institutions.

CRIM.3510 Community-Based Corrections (Formerly 44.351) - Credits: 3

A comprehensive review of community-based sanctions and community-based, early-release mechanisms. In addition to traditional probation and parole reviews, “new” intermediate sanctions such as electronic monitoring, intensive supervision, boot camps, day fines, day reporting centers, and community service sentences.

CRIM.3520 Decision Making Under Uncertainty - Credits: 3

In this course we explore the psychological process of making (or not making) high-stakes decisions in a range of situations. Most theories of decision making (in police, business, medical and ethical contexts) emphasize selecting the "best" course of action, yet the reality is that, in the real world, there is not
always a 'best' option. Most options are high-risk and most carry negative consequences. In such instances decisions involve choosing the least-worst outcome. In this course, and drawing upon the decades of psychological research in areas of decision making (in high-and-low stakes environments), and touching on cognitive, social and neurological research we look at the psychological process of making decisions in range of high-stakes environments.

CRIM.3600 Gender, Race, and Crime (Formerly 44.360) - Credits: 3

This course examines gender and racial implications of criminal laws, criminal justice practices and programs will be examined. The position of women and racial/ethnic minorities will be assessed from the different perspectives of victims, offenders, and criminal justice practitioners.

CRIM.3650 Hate Crimes (Formerly 44.365) - Credits: 3

Hate crimes illustrate bigotry plus criminal acts. This course examines prejudice as a motivation for criminal behavior. The criminological theory for hate crime is reviewed, as well as historical perspectives of this crime category. This is a rich and comprehensive exploration that begins with understanding the psychology of prejudice and ends with reviewing genocide as a mass hate crime.

CRIM.3660 Miscarriages of Justice - Credits: 3

This course will provide a critical analysis of our Criminal Justice system, focusing specifically on policies and practices that lead to errors and unjust outcomes. Students will also explore the factors that contribute to miscarriages of justice, and the impacts on victims, their families, and society. Socio-political and socio-economic factors that contribute to miscarriages of justice will be specifically addressed.

CRIM.3730 Contemporary Issues in Policing (Formerly 44.373) - Credits: 3

This course will explore a number of fundamental issues relevant to contemporary public police in America. Such issues could include, but are not limited to: the impact of police on crime and disorder; police discretion and its control; legitimacy and public support; police culture; the changing role of police in society.

CRIM.3800 Selected Topics in Criminal Justice (Formerly 44.380) - Credits: 3

An advanced course of study and examination of a variety of current issues and topics in criminal justice. Students without a sufficient background in criminal justice courses should not attempt this course. Subject matter to be announced in advance. Visit the current semester schedule on the Continuing Studies website for more details.

CRIM.3850 Crime and Mental Illness (Formerly 44.385) - Credits: 3

This course examines the realities and myths surrounding the involvement of individuals with mental illness in the criminal justice system. Material from criminal justice and psychology will be examined, with emphasis on service models that foster collaboration between mental health professionals, law enforcement, the courts, and corrections.

CRIM.3870 Criminal Mind and Behavior (Formerly 44.387) - Credits: 3

This course will explore the psychological dimensions of criminal thinking and behavior. The course will cover the psychological origins and types of crime, the multidimensional influences on criminal behavior, developmental criminal pathways, diagnoses, assessment and treatment approaches and a description of the continuum of psychopathic behavior.

CRIM.3880 Forensic Psychopathology (Formerly 44.388) - Credits: 3

This course addresses psychopathology in forensic settings, providing students with an integrative approach to understanding the multiple causes of psychological problems and disorders of adult and juvenile offenders as well as crime victims including biological, social, emotional, cognitive, and behavioral influences.

CRIM.3900 Criminal Justice Research Methods (Formerly 44.390) - Credits: 3

An introduction to research methods for the criminal justice professional including terminology, standard methodologies, and elementary statistics. Meets Core Curriculum Essential Learning Outcome for Information Literacy (IL).

CRIM.3950 Statistics in Criminal Justice (Formerly 44.395) - Credits: 3

This course is an extension of concepts learned in 44.390 (Introduction to Criminal Justice Research Methods). Statistics will be utilized as a mathematical language for interpreting the interrelation of social forces impacting criminality and deviance. The course will focus on how various statistics are calculated, but more importantly, the meaning of these figures for criminal justice scholars and practitioners will be discussed.
CRIM.3970 Crime Mapping (Formerly 44.397) - Credits: 3
This course examines the use of new technologies to analyze crime patterns and develop crime prevention strategies. Students study theories that explain the geographic distribution of crime and learn how to use Geographic Information Systems to study crime in ways that draw upon theory as well as how to apply GIS techniques in the law enforcement and corrections fields.

CRIM.3980 Criminal Justice Data Analysis (Formerly 44.4398) - Credits: 3
The student is introduced to computer software packages (i.e. SPSS) used to analyze large quantitative data sets common in criminal justice/criminology. This course is seen as the capstone to the research methods/technology component of the major, and is intended for upper level students, especially those preparing for graduate study.

CRIM.4010 Substance Abuse and Crime (Formerly 44.401) - Credits: 3
Covers the problems posed by substance use/abuse and examines the role and impact of the legal, criminal justice, and public health systems, as well as current treatment/intervention approaches.

CRIM.4180 American Courts and Judicial Process (Formerly CRIM.418) - Credits: 3
This course will study the organization of and the processes employed by American Courts in an intensive participation format. Traditional text lessons on the U.S. Court system will be supplemented by simulations and mock trial problems. Using this two track approach, students will learn about the courts and simultaneously develop the analytical, critical reasoning and public speaking skills used in the Judicial system.

CRIM.4220 Victimology (Formerly 44.422) - Credits: 3
This course examines the patterns of victimization, the characteristics and lifestyles of crime victims, and the impact of their victimizations. The treatment of victims by the criminal justice system will be examined along with possible reforms in these approaches.

CRIM.4770 Intimate Partner Violence (Formerly 44.477) - Credits: 3
This course examines the causes and consequences of domestic violence and the latest research regarding the responses of the criminal justice system.

CRIM.4780 Child Maltreatment (Formerly 44.478) - Credits: 3
This course introduces students to empirical findings and theoretical perspectives concerned with the maltreatment of Children and youth. One of the major course goals is to balance the view of children and youth in the criminal justice system by focusing of their victimization instead of exclusively on their offending behavior.

CRIM.4890 Capstone Seminar in Criminology & Criminal Justice (Formerly 44.489) - Credits: 3
This course is designed to provide criminal justice majors with a capstone experience emphasizing integration of knowledge acquired in previous courses on the causes of criminal behavior and responses to it, particularly the institutions, policies and practices of the criminal justice system. Students engage in the development and production of a senior level research paper grounded in relevant criminology and criminal justice literature.

CRIM.4900 Criminal Justice Honors Seminar (Formerly 44.490) - Credits: 3
Specific practice in the definition, design, and execution of a research project, and an analysis of the impact of contemporary criminal justice research on policy development.

CRIM.4910 Directed Study - Criminal Justice (Formerly 44.491) - Credits: 3
CRIM.4920 Short Directed Study (Formerly 44.492) - Credits: 1
This course is designed as an independent study of a subject with Chair’s permission.

CRIM.4930 Issues in Technology and Security (Formerly 44.493) - Credits: 3
An examination of the causes and consequences of computer crime as well as the criminal justice system’s response to the problem.

CRIM.4950 Criminal Justice Field Studies (Formerly 44.495) - Credits: 6
This is an intense internship program for Criminal Justice majors which requires approval by the Department Chair.
CRIM.4960 Criminal Justice Internship (Formerly 44.496) - Credits: 3

Assigned fieldwork under the supervision and with the permission of the instructor assigned to the course. The purpose is to broaden the educational experience of pre-service students in law enforcement, probation, and correctional agencies within this area. This course is designed to provide a correlation of theoretical knowledge with practical experience in an area of particular interest to the student.

CRIM.4970 Terrorism Internship - Credits: 3

This course is a semester long internship with the Center for Terrorism & Security Studies (CTSS) where students will work on one or more of the center’s research projects. After an initial period of training in data collection and coding, CTSS interns will then work under the supervision of Center faculty and staff.
Degree Pathways are a sample semester-by-semester sequence of courses which might be followed for successful completion of a degree, diploma, credential or certificate from the university. Students should follow the degree pathway appropriate to their catalog year. A student's catalog year is typically defined by the date of their entry into the University of Massachusetts Lowell.

### American Studies

- **General Option**
  
  fall 2015 and beyond
  
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

- **Thematic Option**
  
  fall 2021 and beyond
  
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

### Art

- **Animation & Interactive Media Concentration**
  
  fall 2017 and beyond
  
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

- **Graphic Design Concentration**
  
  fall 2015 - spring 2020
  
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

- **Studio Art Concentration**
  
  fall 2015 and beyond
  
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

### Composition for New Media

- **fall 2022 and beyond**
- **fall 2019 - spring 2022**

### Criminal Justice

- **General Option**
  
  fall 2015 and beyond
  
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

- **Corrections Option**
  
  fall 2016 and beyond
  
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

- **Police Option**
  
  fall 2022 and beyond
  
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

- **Homeland Security Option**
  
  fall 2022 and beyond
  
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

- **Violence Option**
  
  fall 2016 and beyond
  
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
- Crime and Mental Health Option
  Fall 2022 and beyond

  Thesis in Sociology

4 World Ready Language Track (WR track) requires successful completion of a two course sequence in a World Language (depending on placement) and three approved courses on the culture/history/literature/film related to that language, but taught in English. (Total of 15 credits.) For detailed information refer to Policies - Language Requirements (https://www.uml.edu/resources/catalog-archive/current/undergraduate.pdf) in the undergraduate catalog.

A major in Sociology consists of 36 to 45 credits with at least 21 credits at the 3000 level or above (includes required and elective courses in the major). Note: students may not exceed the maximum of 45 credits of Sociology Department courses. At least 75 credits must be earned outside of the major including Core Curriculum requirements and free electives.

Students transferring to the college and wishing to major in Sociology must make individual arrangements with the department chairperson regarding satisfaction of major course requirements.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum (https://www.uml.edu/resources/catalog-archive/current/undergraduate.pdf) policy for further details. You should meet with your faculty adviser to determine how you will meet the Core Curriculum requirements.

Total Minimum Credits = 120

1 Required for entering freshmen.

2 Racial Equity and Inclusion Electives:

Students take three Racial Equity and Inclusion electives. Two of the electives must be at the 3000 level.

- SOCI.3440 (https://www.uml.edu/catalog/courses/SOCI/3440) Race, Gender and Film
- SOCI.3520 (https://www.uml.edu/catalog/courses/SOCI/3520) Latino/as in the United States
- SOCI.3550 (https://www.uml.edu/catalog/courses/SOCI/3550) Black Experience in American Life
- SOCI.3740 (https://www.uml.edu/catalog/courses/SOCI/3740) Race and Families

3 Choose one from the following:

- SOCI.4040 (https://www.uml.edu/catalog/courses/SOCI/4040) Learning from the Field
- SOCI.4050 (https://www.uml.edu/catalog/courses/SOCI/4050)
Feminist Methodologies

- SOCI.4840 (https://www.uml.edu/catalog/courses/SoCl/4840)
- SOCI.4950 (https://www.uml.edu/catalog/courses/SoCl/4950)

Thesis in Sociology

World Ready Language Track (WR track) requires successful completion of a two-course sequence in a World Language (depending on placement) and three approved courses on the culture/history/literature/film related to that language, but taught in English. (Total of 15 credits.) For detailed information refer to Policies - Language Requirements (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) in the undergraduate catalog.

A major in Sociology consists of 36 to 45 credits with at least 21 credits at the 3000 level or above (includes required and elective courses in the major). Note: students may not exceed the maximum of 45 credits of Sociology Department courses. At least 75 credits must be earned outside of the major including Core Curriculum requirements and free electives.

Students transferring to the college and wishing to major in Sociology must make individual arrangements with the department chairperson regarding satisfaction of major course requirements.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) policy for further details. You should meet with your faculty adviser to determine how you will meet the Core Curriculum requirements.

Current UMass Lowell students should be using their Advisement Report in SiS (https://www.uml.edu/Enrollment/SiS/default.aspx). If you need assistance, please contact your adviser.

**Restriction on off-campus study:**

Be advised that any course taken at another institution must be

formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf)

prior to enrollment. See the
catalog policy
SOCl.1010 Introduction to Sociology (Formerly 48.101) - Credits: 3

Serves as the basic course in sociology. Emphasis is directed at the ways in which social institutions such as government, schools, the economy, social class, and the family develop and influence our lives. It is concerned not only with presenting various ways to understand our relationship to society but also with ways to change it. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

SOCl.1020 Social Anthropology (Formerly 48.102) - Credits: 3

Using the comparative approach to society, this course examines several distinct cultures as a means of understanding both the universal constants and the variations in human societies.

SOCl.1110 A Novel Approach to Sociology (Formerly 48.111) - Credits: 3

Examines major sociological themes through analysis of literature, primarily major works of fiction.

SOCl.1120 Sociology Goes to the Movies (Formerly 48.112) - Credits: 3

This course is designed to give students the opportunity to survey primary sociological texts and view films, offer commentary on and analysis of social behavior.

SOCl.1150 Social Problems (Formerly 48.115) - Credits: 3

This entry level course uses the core concept of social problems to introduce basic social science reasoning-how social scientist define research questions, develop systematic methods to study them, gather evidence, search for pattern, in link findings to existent knowledge,. Cases provide opportunities to discuss how private problems develop into public issue, illustrating sociology as a discipline that evolves in response to social conflicts and inequalities. The course also meets General Education requirements for Ethics and Diversity.

SOCl.2004 Introduction to Multiracial Studies - Credits: 3

What does is mean to be biracial or multiracial? How is being bi/multiracial shaped by other identities? We will explore these important questions. You will also learn about the experiences, identities, and unique struggles of bi/multiracials. You will develop the analytical skills to challenge rigid racial binary. Bi/multiracial Americans are a growing population in the United States, and therefore, you are statistically more likely to befriend, date, work with and/or parent a bi/multiracial American than any other generation in American history. Consequently, this course was developed to enhance your racial consciousness by acknowledging the complexities of racial inequality in a population that is often assumed to be evidence of racial harmony in America.

SOCl.2010 Foundations of Social Analysis (Formerly 48.201) - Credits: 3

This intermediate-level class deepens students' analytical skills beyond intro level preparing for more abstract work in Theory and Methods courses. It also prepares students for more complex integration of theory, methods and issue content in 300 level courses. This course will attend to developing students' ability to recognize, and write social science research papers.

SOCl.2050 Public Sociology (Formerly 48.205) - Credits: 3

Public sociology includes sociological initiatives targeting non-university audiences and serving the public good. This course will 1) introduce and critique the various conceptualizations of public sociology linking them to broad schools of sociological theory; 2) explore alternative field models and methods, preparing students for field projects in future semesters; and 3) expose students to sociological practitioners and practices compatible with the mission of the university and department. From a liberal arts perspective, the course stresses critical thinking and communication skills.

SOCl.2100 Sociology of Food (Formerly 48.210) - Credits: 3

This course is about Sociology of food exploring the connection between food, society and culture. Our food choices are influenced by age, gender, ethnicity, class and religion. History of food and methods of food production contribute to understanding of social relations among individuals and social changes in society. This course will examine 1. role of food in society, culture and change, 2. changes in food production from simple to complex societies and 3. problems associated with new systems of food production locally and globally.

SOCl.2100 Sociology of American Education (Formerly 48.303/SOCI.3030) - Credits: 3

Course introduces students to ongoing debates in the field of Sociology regarding the American educational system, its
structures and functions and how it relates to issues of inequality by race, class and gender. Students are expected to explore, examine and evaluate the current issues relating to the system of education in the United States.

**SOCI.2120 Cultures of the World (Formerly 48.212) - Credits: 3**

Focuses on a different country or region each time it is given. Students examine the traditional culture, recent history, economic development, class structure, and international relations of the area covered.

**SOCI.2130 Sociology of Immigration (Formerly 48.307/SOCI.3070) - Credits: 3**

The United States is frequently described as a country with a proud history of immigration. As a result, citizens and residents of the U.S. often identify their home as a nation of people who make up a melting pot country. While useful and insightful, the melting pot metaphor requires comparison with additional explanations of immigration and immigrant experiences. In order to provide deeper comprehension of the topic matter, this course offers sociological examination of immigration processes, laws, and debates. Three areas compose the main portion of class content: historical accounts and theories, legislation, and the social, economical, and political experiences of immigrants.

**SOCI.2140 Sociology of Sports (Formerly 48.340/SOCI.3400) - Credits: 3**

Examines the history of modern sports at the amateur and professional levels and international competition. The impact of race, sex, economics, and politics on the institution of sports will also be examined.

**SOCI.2150 Peacemaking Alternatives (Formerly 48.215) - Credits: 3**

Examines various positive alternatives to war and violence, including disarmament, nonviolence, conflict resolution, and the United Nations. Students do volunteer work with an activist agency or interview an activist. The course stresses the historical and contemporary role of peace movements and allied social-change movements such as feminism, civil rights and environmentalism.

**SOCI.2160 Sociology of War and Peace (Formerly 48.216) - Credits: 3**

The purpose of this course is to examine critically the social forces that contribute to war, war’s social consequences, and the possibilities for creating a more peaceful world.

**SOCI.2170 Social Movements (Formerly 48.382/SOCI.3820) - Credits: 3**

Considers organized action undertaken to alter the social position of a group. Organization, techniques of action, motivation of participants, and group ideologies are studied. Materials from historical, social, psychological, and sociological sources are used.

**SOCI.2200 Self-Assessment and Career Development (Formerly 48.220) - Credits: 3**

Studies the meaning of work in our society. Class participants will assess their own life experiences and develop plans to integrate interests, values, and abilities into meaningful and realistic life/work options.

**SOCI.2250 Sociology of Disability (Formerly 48.225) - Credits: 3**

This course is organized around several key questions that are used to study the concepts of disability and ability from a variety of sociological and interdisciplinary perspectives. Specifically, the course explores representations of disability in popular culture and medical discourses to discuss disability and ability as social constructs. By looking at various literary and cultural representations, this course investigates constructions of the disabled and abled body, how this becomes politicized, and the implications of these constructions.

**SOCI.2310 Sociology of Families (Formerly 48.231) - Credits: 3**

This course uses a sociological approach to understand family forms, practices, and controversies in contemporary society, with particular emphasis on families in the United States. We will look closely at how family experiences and opportunities have changed over time, and also how they vary by gender, age, class, race/ethnicity and sexual orientation. What functions do families perform in modern society? How are they changing? How do these changes affect our lives?

**SOCI.2340 Race and Ethnicity (Formerly 48.234) - Credits: 3**

This course locates and studies the sociological dynamics of race and ethnic relations in the United States as it pertains to all groups. The course material presents theories and models that explain periods of conflict and cooperation between diverse sets of people. While providing some historical background, the course focuses primarily on recent and contemporary situations.
SOCT.2350 Digital Inequalities - Credits: 3
Digital sociology is broadly interested in how (1) social actors use technology in everyday life and (2) technology shapes social processes, especially social problems. This course is a sociological exploration of the development and evolution of racial and gender inequalities online, as well as the implications of racism and sexism online on groups and society.

SOCT.2360 Climate Crisis and Society (Formerly 48.236) - Credits: 3
Focusing on case studies of recent and pending environmental disasters, this course will trace how political, social, economic and cultural arrangements and choices contribute to environmental catastrophes and their resolution. In order to identify possibilities for agency, students will play several environmental games in which they will assume roles in the global economy, governmental and civil society to identify possibilities for agency. As a final project, students will describe a recent disaster identifying both structures that create environmental stresses and the options that might exist for structural changes. The project is intended to develop both critical thinking and communication skills.

SOCT.2400 Sociology of Gender (Formerly 48.240) - Credits: 3
This course is an interdisciplinary introduction to the field of gender studies. A variety of topics are presented, such as gender stratification, work and family, sexual identities, media representations of women and men, women’s movement, and violence against women. Feminist theories and methods are also introduced.

SOCT.2450 Introduction to Labor Studies (Formerly 48.245) - Credits: 3
This foundational course has two overarching learning objectives: (1) to give students basic empirical knowledge and analytical tools to understand the context of work in the United States at the dawn of the twenty-first century and (2) to give students an understanding of how labour unions work, what has been their impact historically, and what their role is in contemporary society. The course will be explicitly interdisciplinary, drawing on readings from history, sociology, economics, political science, and psychology to offer and introduction to understanding work and labor through and analytic lens. In addition, the course will include a service-learning component in collaboration with the UML Labor Education Program.

SOCT.2550 Sociology of Deviance (Formerly 48.255) - Credits: 3
Analysis of how social institutions define and respond to various forms of social deviance, from individual mental illness to gang violence to illegal acts by governments and corporations. Attention will be paid to the construction and management of deviant identities, the role played by social status, and the social importance of institutions of social control.

SOCT.2560 Political Sociology (Formerly 48.256) - Credits: 3
Focuses on the development and use of power in modern society. Emphasis is placed on the relationship of American political institutions to economic institutions, to social class, and to supporting ideologies.

SOCT.2700 Self and Society (Formerly 48.270) - Credits: 3
An examination of the relationship between individuals and the social world around them. The course examines the underlying structures that pattern human interaction. Topics include the social construction of the self, the construction of social reality, and the sociology of emotions, among others.

SOCT.2710 Sociology of Work (Formerly 48.371 and SOCT.3710) - Credits: 3
In the United States, work is a fundamental part of people's identities, consumes huge amounts of our time and effort, is a vital part of our economic and social development, and is linked inextricably to gender, racial-ethnic, and class inequalities. This course will take a sociological perspective, challenging students to take a step back and look analytically at work, something with which most of us are intimately familiar.

SOCT.2760 Sociology of the Gun (Formerly 48.276) - Credits: 3
This course examines the social impact of guns on the American psyche, from deer hunters and intergenerational family bonds to street gangs and broken families, from collectors and recreational users to hospital trauma. Self-defense issues are discussed within the context of the Second Amendment. The conflict between pro-gun and anti-gun special interest groups and the evolution of an American gun culture will be studied.

SOCT.2800 Drugs and Society (Formerly 48.280) - Credits: 3
This course is designed to introduce students to the cultural and poplitical qualities of drugs in society. The course provides
a historical and cross-cultural overview of the use of organic and simple processed substances, as well as a history of drug policy in the United States.

SOCI.3010 Sociology of Human Rights (Formerly 48.301) - Credits: 3

Examines the politically divergent definitions of rights and freedoms. Attention will be paid to the activities of international human rights organizations to the human rights policies of the major powers. Various current human rights issues will be examined. Case histories may include the Soviet Union, Northern Ireland, South Africa, Afro-Americans, Armenians and Palestinians.

SOCI.3020 Seminar on Homelessness: Lowell and Mumbai - Credits: 3

This course will focus on understanding housing insecurity by looking closely at what it means to be homeless in two very different cities, located across the world from each other: Lowell, USA and Mumbai, India. In doing so, we will use this comparison to highlight the root causes of homelessness within a global context, including how certain social situations, policies and innovations may exacerbate and/or improve this situation. Simultaneously, students will gain a first-hand understanding of homelessness in Lowell through performing 3-4 hours of service per week at a local shelter and/or drop-in center.

SOCI.3040 Science, Technology and Society (Formerly SOCI.2220) - Credits: 3

The complex relationships between science, technology, and society are commonly obscured by a popular belief in the value-neutrality and objectivity of science and technology. Being able to analyze that belief as a myth is necessary in order to engage in critical analysis of the ways in which science, technology and society are mutually constituted. Social inequalities are both built into and perpetuated by science, technology, and engineering. Likewise, science, technology, and engineering shape and are shaped by various societal power relations. This course will provide the analytical tools necessary to understand science, technology, and engineering as fundamentally social enterprises and to understand how they shape society.

SOCI.3050 Sociology of Family Law (Formerly 48.305) - Credits: 3

Examines some social issues in family law, the changes therein, and the social climate and consequences accompanying these. By using the sociological method of inquiry to examine family law cases, the relationship between law and society as instruments of order and change are exemplified.

SOCI.3100 Ethnicity in Massachusetts (Formerly 48.310) - Credits: 3

Massachusetts is well known for its rich immigrant history and culture. This course examines the social history of and conditions faced by immigrants upon arrival to Massachusetts, the ways they are affected as they settle in communities and their social and cultural impact locally and state-wide. Selected ethnic groups/communities are examined to understand the common processes and experiences as well as differences among them.

SOCI.3110 Sociological Perspective on Communication & Social Change (Formerly 48.311) - Credits: 3

Most social interactions and interventions involve communication. Thus, communication patterns present critical issues for sociological inquiry. This course introduces communication as a central yet often ignored element of social life. It surveys existing communication theories, then focuses on models used by marginalized populations in efforts to democratize communication systems. Finally, it introduces tools for communication strategizing. As a final product students will conduct a frame analysis of a current social topic. From a general liberal arts perspective, the course will stress critical thinking and writing skills.

SOCI.3160 Youth and Society (Formerly 48.316) - Credits: 3

Youth (or adolescence) constitutes a historically and socially constructed stage of the life course between childhood and adulthood. Since the early twentieth century, society’s view of this life period has been ambivalent, at once glorifying the age of youth while also fretting over the problems that youth face. This course takes a sociological view of the study of youth/adolescence with particular attention to: (1) how this stage of the life course intersects with race, gender, immigration status and sexuality; (2) how society has responded to youth over time through a range of youth-serving organizations and media representations; and (3) how youth have responded as agents in their own public representations and development.

SOCI.3170 Sociology of Genocide (Formerly 48.317) - Credits: 3

The deliberate destruction of an ethnic group is an historical event and a social process. This course addresses such questions as: Why do genocides occur? Why do people become genocide perpetrators? How do genocides affect survivors and their offspring? How can genocide be prevented? Focus is on
Native American, Armenian and Jewish experiences and recent cases of ethnic cleansing.

SOCL.3200 Community Service (Formerly 48.320) - Credits: 3
Course uses fieldwork approach to understand social problems and to discipline study and career pursuit in the area of public service.

SOCL.3210 Classical Social Theory (Formerly 48.321) - Credits: 3
This course offers a critical examination of major classical sociological theories. It emphasizes the relationship between the individual and society and the competing pressures for social order and social conflict.

SOCL.3220 Contemporary Social Theory (Formerly 48.322) - Credits: 3
This course offers a critical examination of major contemporary sociological theories, including critical theory, neo-Marxism, critical race theory, feminist theory, and postmodernism.

SOCL.3250 Global Conflicts (Formerly 48.325) - Credits: 3
SOCL.3300 Fast Food, Hot Planet: Sociological Approaches (Formerly 48.330) - Credits: 3
With an eye on climate change sustainability, this course maps the social and historical dimensions of crisis and inequalities of food production and distribution. In addition to exploring food security’s relation to sustainable food production, students will strengthen critical thinking, writing, and library research skills.

SOCL.3350 Sociology of Intimacies and Sexualities - Credits: 3
In this course, students will investigate the relationship between society and sexualities, including: social categorizations of sex, gender, and sexuality; social and cultural representations of intimacy and sexuality; and social and institutional control of sexualities and sexual behavior and practice. Students will read theoretical and methodological works from the field of sexualities studies, including sociological, feminist, post-colonial, and queer theorists. By the end of the course, students will be able to articulate a sociological perspective on intimacy and sexualities.

SOCL.3410 Wealth, Status and Power (Formerly 48.341) - Credits: 3
Focuses on the phenomenon of social class distinctions with particular emphasis on social class in America. The approach is both historical and sociological.

SOCL.3440 Race, Gender and Film - Credits: 3
In this course, we will critically and sociologically analyze racial and gender patterns in American films. We will analyze how each film is shot with regard to racial messages using film studies terminology (for example, cinematography). We will also highlight which films are recognized with prestigious awards, and what this suggests about American society. In addition, we will discuss the role of power in the film industry and how directors, producers and screenwriters shape the public imagination of the American society and the world through widely disseminated media portrayals. We will also critically evaluate seemingly race-neutral, animation films, such as children’s films, where characters appear in animal form.

SOCL.3450 Urban Sociology (Formerly 48.345) - Credits: 3
Deals with issues related to the quality of life in American cities. Students taking this course may engage in research projects on the city of Lowell and the role of the University of Massachusetts Lowell within that city.

SOCL.3510 The Sociology of Health and Health Care (Formerly 48.351) - Credits: 3
With the passage of the Affordable Care Act, the U.S. Health Care system is undergoing a radical change as profound as any in U.S. history including those for minority and woman’s rights. A large segment of the population has struggled to obtain even basic health care coverage. The changes taking place are analyzed in a historical and comparative context by examining health care in other countries. Special attention is given to understanding the professions in medicine and the role medical professions have had in shaping medical care. At the micro level, the course examines evolving health care provider/patient relationships to better understand the level of control patients can exert over their health care decisions.

SOCL.3520 Latinos/as in the United States - Credits: 3
By 2060, Latinos are forecast to comprise over 28 percent of the US population. While the presentation of Latinos/as in public discourse often frames them a recently arrived immigrants, Spanish-speaking peoples in the US have a long and rich history. This course focuses a sociological lens on the historical and contemporary experiences of a community whose emergence requires deep analysis. Emphasis is placed on immigration policy, demographic shifts, labor market
discrimination and bilingual education.

SOCI.3550 Black Experience in American Life  
(Formerly 48.355) - Credits: 3

An investigation of religious institutions and experiences. Emphasis is placed on the influence of religion on social change.

SOCI.3570 The Sociology of Religion (Formerly 48.357) - Credits: 3

An analysis of non-violent efforts to achieve social change through demonstrations, civil disobedience, etc. Movements led by Mahatma Gandhi, Martin Luther King, Jr., and others are examined.

SOCI.3600 Sociology of Non-Violence (Formerly 48.360) - Credits: 3

The course examines the role of social forces in defining the law. Topics include the legal profession, white-collar crime, and the importance of race, class and gender in the criminal justice system.

SOCI.3610 Sociology of Law (Formerly 48.361) - Credits: 3

The course examines the development of social welfare policy in the United States as well as alternative strategies for social welfare provision. Particular attention is paid to the role of race/ethnicity, class, and gender in the formation of social welfare policy.

SOCI.3620 Social Welfare Policy (Formerly 48.362) - Credits: 3

This course is organized around several questions that will be used to help engage students in the study of the concepts of disability and gender from a variety of sociological and interdisciplinary perspectives. The course will explore feminist representations of disability and gender in popular culture discourses to discuss disability as well as gender as social constructs. By analyzing books, movies, television, cartoons, and the internet, we will look at how conceptualizations of disability and gender intersect and are represented in these “texts” and the possible influences on perceptions and definitions of disability.

SOCI.3800 Sociology of Mass Media (Formerly 48.380) - Credits: 3

This course will explore the ”traditional” definition of family throughout American history as well as how now more than ever, many families challenge the conventional definition. We will discuss how different political, economic and social factors (i.e. enslavement, immigration policies, etc.) have shaped the experiences, structure and dynamics of how families function in the United States. We will analyze families of diverse racial backgrounds as well as other families that have been constructed as outside of the ”norm,” such as LGBT families, military families and adoptive and foster families. We will also outline specific societal changes (e.g. assisted reproductive technology) that have contributed to how families form, bond and experience family life.

SOCI.3800 Sociology of Mass Media (Formerly 48.380) - Credits: 3

Examines ownership and control patterns of electronic and print media and their impact on media content and censorship.

SOCI.4020 Quantitative Methods for Social Research  
(Formerly 48.402) - Credits: 3

An introduction to methods of social research, with emphasis on quantitative research methods. Presents basic statistical techniques used in social research as well as the computer software used for analyzing social science data. For majors only.

SOCI.4030 Qualitative Methods for Social Research  
(Formerly 48.403) - Credits: 3

Qualitative research methods. Discusses various strategies employed by qualitative researchers with special emphasis on field research. For majors only. Meets Core Curriculum Essential Learning Outcome for Applied & Integrative Learning (AIL) and Critical Thinking & Problem Solving (CTPS).

SOCI.4040 Learning from the Field (Formerly 48.404) - Credits: 3

Provides students with the opportunity to directly observe and participate in the operation of a social service organization.

SOCI.4050 Feminist Methodologies (Formerly 48.405) - Credits: 3

Despite the recent growth of feminist methodologies, there is no one way of doing feminist methodologies. The growing body of literature in this area addresses the distinctive challenges and strengths of doing this research. Gender Studies scholars especially seek to question the framing of a study, managing of emotions, and ethical dilemmas. We will explore feminist strategies for creating, implementing, and analyzing a
project that is grounded in the everyday lives of people while situating them in a social, political, and economic context. We will explore the interdisciplinary intersections where these challenges push at the boundaries of the disciplines of your major field of study. We will also investigate how to use a variety of qualitative approaches while doing a feminist project and the ways in which feminism can enlighten understandings of “traditional” qualitative methods.

SOCI.4210 Seminar on the Family (Formerly 48.421) - Credits: 3
Study of the family structures and gender roles in various human societies. Prerequisites: 48.101 plus either 48.231 or 48.241.

SOCI.4690 Seminar on Global Society (Formerly 48.469) - Credits: 3
Considers the spread of industrial society globally. Emphasizes economic, political and cultural changes in various parts of the world and in the USA.

SOCI.4720 Seminar on Ethnic Communities (Formerly 48.472) - Credits: 3
This course examines a variety of issues, problems and prospects immigrants experience as they attempt to "make it in America". Immigrant America is increasingly ethnically diverse and this course focuses on the factors underlying migration and the ethnic communities migrants settle into with the aim to understand the cultural and contextual basis of their lives, their success and challenges.

SOCI.4840 Internship I (Formerly 48.484) - Credits: 3

SOCI.4845 Civil Society and Social Change in Valencia, Spain - Credits: 3-6
Students will study civic community in the third largest city in Spain to understand the unique linguistic and socio-political history of the region. The region provides rich opportunity for sociological analysis of socio-linguistic diversity within a modern national and global context. Readings, papers and field tips will emphasize the cultural construction of community and society. In addition, students who choose the six-credit option will spend 120 hours working in an individually defined internship placement in Valencia during six weeks after the end of the Spring semester. In addition students will be assigned hands-on activities and readings that will facilitate learning in the internship placement settings.

SOCI.4910 Directed Studies in Sociology (Formerly 48.491) - Credits: 3
The student, through regular and frequent consultation with an instructor, develops a course of directed reading in sociology and defines a problem for individual research. Prerequisite: permission of instructor.

SOCI.4920 Directed Studies: Sociology (Formerly 48.492) - Credits: 1
A one-credit, short course available only to qualified seniors. Prerequisite: Permission of Department Chairperson.

SOCI.4950 Thesis in Sociology (Formerly 48.495) - Credits: 3
A program of study which affords the advanced student with an additional opportunity to pursue a previously explored problem in greater depth or to initiate a new study. The purpose is to sharpen and refine techniques for scholarly research and presentation in the student’s major discipline. Prerequisites: demonstrated proficiency in an area selected for directed study and permission of instructor.

SOCI.4960 Practicum Experience (Formerly 48.496) - Credits: 3
A program of on-campus and/or off-campus experience for sociology majors and minors only. Specific requirements vary depending upon department policies and the nature of the program undertaken by the student. The intent of the practicum experience is to provide an occasion for investigation of a community, social, cultural, or artistic area and for applying techniques of problem solving and/or skills that are appropriate to the student’s major discipline. May be repeated to a maximum of six credits. Students are graded satisfactory and unsatisfactory. The practicum experiences may not be substituted for a required course in the major. Prerequisite: permission of Chairperson.
College of Fine Arts, Humanities & Social Sciences

Degree Pathways are a sample semester-by-semester sequence of courses which might be followed for successful completion of a degree, diploma, credential or certificate from the university. Students should follow the degree pathway appropriate to their catalog year. A student’s catalog year is typically defined by the date of their entry into the University of Massachusetts Lowell.

American Studies

- General Option
  - fall 2015 and beyond
  - (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
- Thematic Option
  - fall 2015 and beyond
  - (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

### Total Minimum Credits = 127-129
No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum policy for further details. You should meet with your faculty adviser to determine how you will meet the Core Curriculum requirements.

Please see advisor or Music Office for more specific requirements pertaining to Freshman Chorus, Recital Attendance, Applied Music, Ensembles and Internships.

Current UMass Lowell students should be using their Advisement Report in SiS. If you need assistance, please contact your adviser.

Restriction on off-campus study:

Be advised that any course taken at another institution must be formally approved.

Prior to enrollment. See the catalog policy for details.

### Department Specific Policies

- Please see advisor or contact the Music Department for more specific requirements pertaining to Freshman Chorus, Recital Attendance, Applied Music, Ensembles and Internships.
- Current UMass Lowell students should be using their Advisement Report in SiS (http://www.uml.edu/enrollment/sis/default.aspx). If you need assistance, please contact your adviser.
- **Restriction on off-campus study:** Be advised that any course taken at another institution must be formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the catalog policy (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

for details.

*Last updated: 3/18/2022.*
MUSR.1100 Introduction to Music Technology - Credits: 2

This is a one semester course exploring the inventive ways today's musicians incorporate technology for creative, promotional, and education purposes in their careers. This course provides a practical and hands-on approach to notation software, MIDI sequencing and electronic instruments, audio and video applications, the computer as a performance instrument, and other web-based professional resources.

MUSR.1150 SRT Colloquium - Credits: 0

A weekly colloquium series for all Sound Recording Technology majors, providing opportunities for the presentation of student work, masterclasses, and guest lectures, as well as a place to address program-wide topics and issues. Note: Only first-year SRT students enroll in this course. Attendance and participation is required as part of all SRT courses for upperclassmen.

MUSR.1600 Audio Practicum - Credits: 1

Basic training in core practices in the recording studio in preparation for subsequent SRT courses. This will include proper handling of equipment, check-out and check-in procedures, scheduling procedures, lab rules, session etiquette, and PA/Live sound setup and teardown. In addition to the one hour weekly class meeting, each student will work a weekly shift in the SRT office as part of their contact time. This will give them first hand experience in the day-to-day management and practices of out studio facilities.

MUSR.2100 Audio in Theory and Practice - Credits: 2

The theory and usage of audio-recording/reproduction components are explored at a basic level and supplemented by hands-on experience. The aesthetics of recording media and their influence on society are discussed in relation to the artistic and commercial functions of the media.

MUSR.2600 Music Production - Credits: 3

Intermediate audio production. Planning and executing recording sessions which involve a variety of musical ensembles under diverse recording conditions; live-performance/concert recordings; multi-track recording, overdub, and remix procedures; and research in recording techniques. Laboratory required.

MUSR.3010 Music, Technology and Society (Formerly 78.301) - Credits: 3

Examines how recording technology has changed music and the relationships of music and society. The course studies and evaluates the application of technology to making music, to music listening, to styles of music, and to music's roles in society, other art forms, and media. The evolving importance of technology in music over the past century is charted through the study of musical examples and through viewing how human values are reflected in this century's timely music. Studies will be based on assigned readings, lectures and discussions, examination of current and historically significant music recordings, motion pictures and media pieces for this artistry, their use of available technology, and their impact on human values and society.

MUSR.3050 Survey: Music Technology (Formerly 78.305) - Credits: 3

The use of technology in music listening, performance, analysis, composition, recording and music study will be presented. The dimensions and applications of technology will be discussed as related to aesthetics, the musician's experiences, musical style, and the musical experience. Basic introduction to the technologies of audio recording. Course includes required reading, listening, session participation. Music Majors Only.

MUSR.3100 Introduction To Recording (Formerly 78.310) - Credits: 3

The theory and usage of audio-recording/reproduction components are explored at a basic level and supplemented by hands-on experience. The aesthetics of recording media and their influence on society are discussed in relation to the artistic and commercial functions of the media. Individual research on a subject of interest to the student is required.

MUSR.3200 Mixing and Mastering Audio - Credits: 2

This course builds on the material presented in Music Production, following the recording process through post-production tasks including mixing and mastering. Students will explore the application of informed musical judgment to the mixing process, learn about creative and technical uses of signal processing, and gain a basic understanding of the tasks involved in mastering.

MUSR.3500 Video Production for SRT (Formerly 78.350) - Credits: 3

An introductory course in the fundamentals of video technology and production; encompassing signal transmission, tape formats, transduction, optical characteristics of lenses and cameras, production equipment and procedures, and post-production equipment and techniques; hands-on experience via video and audio for video projects. Permission of Coordinator and Chair.

MUSR.3600 Critical and Analytical Listening
(Formerly 78.360) - Credits: 3
The recognition and identification of timbral modifications and spatial characteristics. Aural analysis of historically significant and current music recordings for recording techniques, musical balance, performance intensity, sound quality and imaging. Development of critical listening skills and sound evaluation techniques.

MUSR.3900 Acoustics & Psychoacoustics (Formerly 78.390) - Credits: 3
The physical attributes of sound and acoustic measurement; displacement, time, velocity, acceleration, force, energy, resonance, wave shapes and spectral energy distribution are examined for most instruments; acoustic properties of the ear and enclosed environments; acoustic measurements and instruments. The interrelationships and differences of physical acoustics and psychoacoustics are stressed.

MUSR.4010 Music of The Beatles (Formerly 78.401) - Credits: 3
This course will explore how technology shaped, enhanced and defined the music of The Beatles. In doing so their music will also be studied for its musical materials, stylistic content, the sound qualities of recordings, cultural impacts, and extramusical aspects, as well as the music and cultural ideas that influenced the music of The Beatles. Selected solo recordings and compositions of the artists will also be examined to trace the growth of ideas and materials with their roots in The Beatles’ music.

MUSR.4100 Recording Production (Formerly 78.410) - Credits: 3
Intermediate audio production. Planning and executing recording sessions which involve a variety of musical ensembles under diverse recording conditions; live-performance/concert recordings; multi-track recording, overdub, and remix procedures; application of informed musical judgment to the mixing process; and research in recording techniques. Laboratory required.

MUSR.4110 Audio Theory (Formerly 78.411) - Credits: 3
Advanced audio theory. An in-depth examination of the principles and operating specifications of the major components of the modern recording studio: mastering and multi-track recorders, mixing consoles, microphones, monitoring systems, and signal processing equipment. Recording projects and technical research. Laboratory required.

MUSR.4130 Advanced Audio theory - Credits: 2
Advanced audio theory. An in-depth examination of the principles and operating specifications of the major components of the modern recording studio: mastering and multi-track recorders, mixing consoles, microphones, monitoring systems, and signal processing equipment. Recording projects and technical research. Laboratory required.

MUSR.4200 Sound Synthesis 1 (Formerly 78.420) - Credits: 3
Sound synthesis equipment and techniques are studied and supplemented with sound synthesis studio laboratory work. The course will cover practices and principles of analog and digital sound synthesis and their historic origins, related audio equipment and applications, theories of sound samplers and sequencers, and an introduction to MIDI applications in sound synthesis and recording production.

MUSR.4210 Sound Synthesis 2 (Formerly 78.421/521) - Credits: 3
Advanced sound synthesis techniques are studied and supplemented with sound synthesis studio laboratory work. The course will cover MIDI implementation in analog and digital sound synthesis, the historic origins of computer music and electro-acoustic music, live electronic music performance, audio equipment and applications of MIDI-based and functional devices and processors, advanced music production and sound synthesis via MIDI. Permission of Coordinator and Chair.

MUSR.4300 Computer Applications in Music (Formerly 78.430) - Credits: 3
Applications of computers to audio production is emphasized in studies of computer generated and controlled sound sources and devices, algorithmic composition, computer music, digital signal processing, advanced MIDI applications and programming, and computer synchronization of audio and video. Laboratory work required. SRT majors and minors. Permission of Coordinator and Chair.

MUSR.4400 Multitrack Production (Formerly 78.440) - Credits: 3
24-track recording. Session planning and preparation, tracking process; microphone techniques and applications; incorporating processing; planning the mix and sound stage; MIDI applications, rough mixdown. Recording project required.
MUSR.4410 Advanced Multitrack Production (Formerly 78.441) - Credits: 3
Advanced production techniques; tape machine calibration; automation and final mixdown; digital multitracking; SMPTE applications; premastering and mastering. Recording project required.

MUSR.4500 The Recording Industry (Formerly 78.450) - Credits: 3
A detailed survey of the many career options of the audio-recording industry: position duties and responsibilities. Guest lecturers from diverse careers in the industry share their experiences, disciplines, and backgrounds. Permission of Coordinator and Chair.

MUSR.4550 Careers in Audio - Credits: 2
A detailed survey of the numerous career paths in audio-related industries. Skills required to find and obtain internships and job opportunities are explored. Guest lecturers from diverse careers in the industry share their experiences, disciplines, and backgrounds.

MUSR.4600 Audio for Visual and Interactive Media (Formerly 78.460) - Credits: 3
This course is designed to introduce students to the theory and practice of audio for visual media including production and post-production sound. Students will study of the aesthetics and philosophies of sound design for visual media through the study of important films and television shows and through applied projects which include the planning and execution of production sound, dialog editing and ADR, the creation and design of sound effects, performance of Foley, sound effects editing, music editing, current and historic synchronization technologies, and re-recording.

MUSR.4700 Recording Studio Repair and Maintenance (Formerly 78.470) - Credits: 3
Hands-on experience in repair and maintenance techniques. Common minor repairs and routine maintenance of recording equipment; test equipment and tools; power supplies, op-amps, and low-noise amplifiers; distortion; analog and digital hardware; and interface considerations. Permission of Coordinator and Chair.

MUSR.4930 Internship in SRT (Formerly 78.493) - Credits: 6
Practical experience in audio-recording under the supervision of a professional firm. At least twenty hours per week for fifteen weeks is spent working at an entry-level position for a firm involved in audio.

MUSR.4940 Senior Project In Sound Recording Technology (Formerly 78.494) - Credits: 6
Advanced projects developed in consultation with faculty advisor. Typical projects include production of a complete record album, investigation of experimental recording techniques, and original research in recording technology. To be completed in place of MUSR.4930 by students not choosing an internship. Permission of Coordinator and Chair.

MUSR.4950 Directed Study in Sound Recording Technology (Formerly 78.495) - Credits: 3
Individual work under the supervision of a member of the SRT faculty on a topic or area of production approved by the instructor and the Coordinator of SRT. Permission of Coordinator and Chair.
THEA.2010 Introduction to Theatre (Formerly THEA 201) - Credits: 3
This course explores the arts and practices of theatre from classical to contemporary times. Students are introduced to the basic concepts and forms of theatre as well as to theories of its origins and purposes. Replaces 42.219 and 59.219; credit may not be earned for both 42/59.219 and THEA 201.

THEA.2020 Living Theatre: The Audience Experience - Credits: 3
In this course students will experience the fundamentals of live theatre. Students will attend 5-8 productions of varying styles; including but limited to period productions, musicals and new works. Through readings, conversations with professional artists and live performances, students will explore the latest trends of the local area theatre community. Students will critically analyze theatrical productions from the point of view of audience. The purpose of our analysis as audience - to be able to read scripts and critically respond to productions from an informed perspective.

THEA.2210 Stagecraft (Formerly THEA 221) - Credits: 3
Survey of the materials, skills, and techniques of technical theatre (including scenic construction, scene painting, lighting, and sound production) through reading, lecture, and hands-on experience. Replaces 42.252; credits may not be earned for both 42/59.252 and THEA 221.

THEA.2300 Foundations of Theatrical Design (Formerly THEA 230) - Credits: 3
Basic principles and techniques in scenic, lighting and costume design for theatre. Replaces 42.260 and 59.386; credits may not be earned for both 42.260 and THEA 230 or for 59.386 and THEA 230.

THEA.2610 Acting 1 (Formerly THEA 261) - Credits: 3
Theory and practice of acting including exercises in the elements and methods of acting and the preparation of a public performance. Replaces 42.261 and 59.261; credits may not be earned for both 42/59.261 and THEA 261.

THEA.3110 Play Production (Formerly THEA 311) - Credits: 3
Introduction to the design and technical aspects of theatre through hands-on experience working on campus productions. Focus on basic principles of set, lighting, props, costume, makeup, and sound production. May be repeated for credit.

THEA.3400 Directing Workshop (Formerly THEA 340) - Credits: 3
Study of the process of directing plays of different styles. Students will direct scenes with other members of the workshop and their work will be analyzed by the instructor and fellow students. Replaces 42.343 and 59/343; credits may not be earned for both 42/59.343 and THEA 340.

THEA.3620 Acting 2 (Formerly THEA 262) - Credits: 3
A continuation of THEA 261 emphasizing techniques of scene study and characterization. Pre-requisite THEA 261 or the equivalent. Replaces 42/59.262; credits may not be earned for both 42/59.262 and THEA 262.

THEA.3640 Performing Shakespeare - Credits: 3
An introductory workshop exploring Shakespeare's plays from the standpoint of the actor. We will study techniques for understanding and activating Shakespeare's words through our bodies, voices, and imaginations. Students will gain a basic, hands-on knowledge of Elizabethan theatre practices, as well as skills in analyzing and performing Shakespeare's language, characters, and genres through action exercises, text analysis, monologues, and scene study.

THEA.3650 Voice and Movement (Formerly THEA 265) - Credits: 3
To discover the possibilities of you unique voice and physicality, to gain techniques to free up tension, release habitual blocks and inhibitions, and to explore creative expression through the voice and body, ultimately applying all of these elements to performance. This course uses techniques designed for voice, movement, and physical acting including Linklater, Alexander, Viewpoints, Grotowski, Yakim and others.

THEA.4010 Topics in Theatre (Formerly THEA 401) - Credits: 3
Advanced study of a selected area of theatrical production, history, texts, or theory. Repeatable for credit when topics differ. Replaces 42.414 and 59.414; repeated credit may only be earned when topics differ.

THEA.4900 Performance Practicum (Formerly THEA 490) - Credits: 1-3
THEA.4920 Technical Theatre Practicum (Formerly
THEA 492) - Credits: 1

One-credit practicum in technical theatre (scenic construction, lighting, sound, costuming), consisting of work on a campus production under the supervision of Theatre Arts faculty.

THEA.4930 Practicum in Theatre (Formerly THEA 493) - Credits: 1-3

Part-time, full-semester internship at a professional theatre. Program director’s permission required. Replaces 42.495 and 59.495; may be repeated for credit with permission.

THEA.4940 Directed Study in Theatre (Formerly THEA 494) - Credits: 3

Supervised independent project in theatre. Instructor’s permission required. Replaces 42.494 and 59.494; may be repeated for credit with permission.

THEA.4950 Senior Seminar in Theatre (Formerly THEA 495) - Credits: 1

Capstone-experience seminar focusing on advanced projects (in performance, dramaturgy, or design/tech) in the service of portfolio building and preparation for graduate study and/or work in the professional world of theatre. To be taken during the student’s final year in the program. Instructors Consent required.
LABR.2400 Introduction to Labor Studies (Formerly WLS 240) - Credits: 3

This foundational course has two overarching learning objectives: (1) to give students basic empirical knowledge and analytical tools to understand the context of work in the United States at the dawn of the twenty-first century and (2) to give students an understanding of how labour unions work, what has been their impact historically, and what their role is in contemporary society. The course will be explicitly interdisciplinary, drawing on readings from history, sociology, economics, political science, and psychology to offer and introduction to understanding work and labor through an analytic lens. In addition, the course will include a service-learning component in collaboration with the UML Labor Education Program.

LABR.4020 Directed Studies in Work, Labor and Society (Formerly WLS 402) - Credits: 1-3

This course, taken for 1 or 3 credits, may serve as a capstone experience for advanced students in the Work, Labor and Society minor, helping them to explore a work-related topic of interest while working closely with a faculty member. Projects that students complete for the Directed Studies will vary in length, scope, and topic, depending on how many credits are taken and which faculty member agrees to work with the student. What all projects will have in common is (1) a topic clearly relevant to work, labor and society (2) an emphasis on achieving deep learning through advanced study, and (3) the integration of two or more distinct disciplines, integrating these disciplinary insights in order to solve a complex problem or analyze a complicated issue.

LABR.4100 Internship in Work, Labor and Society (Formerly WLS 410) - Credits: 3

This internship option allows students to take full advantage of the substantial links to the community that the UML Labor Extension program has built over many years of work in this region. The internship provides opportunities for students to learn through thoughtful engagement in community service, applying knowledge of work/labor issues gained in the classroom to the world outside the classroom. Students will be expected to spend a minimum of 100 hours during the semester at the internship site, and to have a designated supervisor on site as well as a faculty supervisor overseeing their work and ensuring it is a meaningful learning experience.
French Minor

The French minor in the Department of World Languages and Cultures encourages students to work toward proficiency in the French language, and to learn about the culture, history, literature, cinema, and linguistic variation of the vast French-speaking world. The French minor focuses on practical, culture-based proficiency in the use of French and consists of a minimum of 18 credits (max. 24) of required and approved elective courses with the WLFR prefix. At least two courses must be at the 3000 level or above.

Required Courses

- WLFR.1010 (https://www.uml.edu/catalog/courses/WLFR/1010) French 1 and Culture
- WLFR.1020 (https://www.uml.edu/catalog/courses/WLFR/1020) French 2 and Culture
- WLFR.2110 (https://www.uml.edu/catalog/courses/WLFR/2110) French 3 and Culture
- WLFR.2120 (https://www.uml.edu/catalog/courses/WLFR/2120) French 4 and Culture
- WLFR.3/4xxx (https://www.uml.edu/catalog/courses/WLFR) French Elective at 3000/4000 level

Note: Students who placed out of any of the elementary and intermediate language courses (French 1-4) will need to take more elective courses (labeled WLFR.3/4xxx (https://www.uml.edu/catalog/courses/WLFR) and taught in French) in order to complete the necessary number of credits required for the minor. Please note that World Ready courses for the French track are not part of this minor (even if labeled WLFR). See course description in university catalog for details.

For more information, contact the Department of World Languages and Cultures (https://www.uml.edu/FAHSS/Languages-Cultures>Contact.aspx).

Spanish Minor

The Spanish minor in the Department of World Languages and Cultures encourages students to work toward proficiency in the Spanish language, and to learn about the culture, history, literature, cinema, and linguistic variation of the vast Spanish-speaking world. The Spanish minor focuses on practical, culture-based proficiency in the use of Spanish and consists of a minimum of 18 credits (max. 24) of required and approved elective courses with the WLSP prefix. At least two courses must be at the 3000 level or above.

Required Courses

- WLSP.1010 (https://www.uml.edu/catalog/courses/WLSP/1010) Spanish 1 and Culture
- WLSP.1020 (https://www.uml.edu/catalog/courses/WLSP/1020) Spanish 2 and Culture
- WLSP.2110 (https://www.uml.edu/catalog/courses/WLSP/2110) Spanish 3 and Culture
- WLSP.2120 (https://www.uml.edu/catalog/courses/WLSP/2120) Spanish 4 and Culture
- WLSP.3/4xxx (https://www.uml.edu/catalog/courses/WLSP) Spanish Elective at 3000/4000 level

Note: Students who placed out of any of the elementary and intermediate language courses (Spanish 1-4) will need to take more elective courses (labeled WLSP.3/4xxx (https://www.uml.edu/catalog/courses/WLSP) and taught in Spanish) in order to complete the necessary number of credits required for the minor. Please note that World Ready courses for the Spanish track are not part of this minor (even if labeled WLSP). See course description in university catalog for details.

For more information, contact the Department of World Languages and Cultures (https://www.uml.edu/FAHSS/Languages-Cultures>Contact.aspx).
Zuckerberg College of Health Sciences

Degree Pathways are a semester-by-semester sequence of courses recommended for successful completion of a degree, diploma, credential or certificate from the university. Students should follow the degree pathway appropriate to their catalog year. A student's catalog year is typically defined by the date of their entry into the University of Massachusetts Lowell.

Applied Biomedical Sciences

- Clinical Science Option fall 2020 and beyond [https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf]
- Medical Laboratory Science Option fall 2020 and beyond [https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf]

Clinical Laboratory Sciences

- Clinical Science Option fall 2017 - spring 2019 [https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf]
- Medical Laboratory Science Option fall 2018 - spring 2019 [https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf]

Exercise Physiology

- fall 2016 - spring 2018 [https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf]

Exercise Science (3-year)

Exercise Science (4-year)

- Clinical Option fall 2021 and beyond [https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf]
- Exercise and Fitness Management Option fall 2020 and beyond [https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf]

Nutritional Science

- General Option fall 2020 and beyond [https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf]
- Nutrition and Wellness Option fall 2020 and beyond [https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf]
- Dietetics Option fall 2022 and beyond [https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf]

Nursing

- 3.5-Year Degree fall 2020 and beyond [https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf]
- 4-Year Degree fall 2020 and beyond
Pharmaceutical Sciences

- Pharmaceutical Marketing and Management Option fall 2020 and beyond

Public Health

- Health Sciences Concentration spring 2021 and beyond
- Community Health/Health Promotion Concentration spring 2021 and beyond
Policies

The policies below apply to students in the Zuckerberg College of Health Sciences. Please also see the university catalog for general policies that apply to all students.

- Academic Advising
- Academic Requirements
- Academic Standards
- Appeals Procedure for Reinstatement
- Declaration of Program and Change of Program
- Requirements for Continued Matriculation
- Special School Requirements
- Transfer Policies

Zuckerberg College of Health Sciences Academic Standards

Department of Biomedical and Nutritional Sciences

1. Applied Biomedical Sciences - Clinical Science Option Cumulative, semester, and science GPA requirement of 2.500 Science GPA Includes: A&PI/II, Phy. Chem I/II, Micro, Organic Structures &Reactions, and Clinical Lab Theory (with all labs included) Grade of at least C in professional courses No withdrawals from professional courses

2. Applied Biomedical Sciences - Medical Laboratory

Science Option Cumulative, semester, and science GPA requirement of 2.500 Science GPA Includes: A&PI/II, Phy. Chem I/II, Micro, Organic Structures &Reactions, and Clinical Lab Theory (with all labs included) Grade of at least C in professional courses No withdrawals from professional courses

3. Nutritional Science - Dietetics Option Cumulative, semester, and science GPA requirement of 2.500 Science GPA Includes: A&PI/II, Phy. Chem I/II (with labs), and Human Nutrition Minimum grade of B- for professional courses Scores of 80% or better on assignments that directly relate to a competency outlined by the accrediting body of the program.

4. Nutritional Sciences - General Option Cumulative, semester, and science GPA requirement of 2.500 Science GPA Includes: A&PI/II, Phy. Chem I/II (with labs), and Human Nutrition

5. Nutritional Sciences - Nutrition and Wellness Option Cumulative, semester, and science GPA requirement of 2.500 Science GPA Includes: A&PI/II, Phy. Chem I/II (with labs), and Human Nutrition

6. Pharmaceutical Sciences - Pharmaceutical Marketing and Management Option Cumulative and semester GPA requirement of 2.500

Department of Physical Therapy and Kinesiology

1. Exercise Science - Clinical Option Must maintain a minimum 2.500 cumulative/overall GPA Must maintain a minimum 2.500 science GPA Sciences GPA includes: A&PI/II, Phy. Chem I/II, Physics I/II, and Biology I/II (with labs) Must maintain a minimum 2.500 major GPA (all EXER courses) Must successfully complete all professional courses (EXER) with a grade of C (2.000) or higher No withdrawals from professional courses (all EXER courses)

2. Exercise Science - Exercise and Fitness Management Option Must maintain a minimum 2.500 cumulative/overall GPA Must maintain a minimum 2.500 science GPA Sciences GPA includes: A&PI/II, Phy. Chem I/II, and Bio. for Scientists (with labs) Must maintain a
minimum 2.50 major GPA (all EXER courses) No withdrawals from professional courses (all EXER courses)

3. Exercise Science - Students accepted into the Direct Entry to Physical Therapy Program Cumulative/overall and pre-requisite science GPA requirement of 3.4 (calculated at the end of junior and senior year only) Pre-requisite Science GPA includes: A&PI/II, Phy. Chem I/II, and Physics I/II (with labs), Kinesiology, Exercise Physiology Must successfully complete all professional courses (EXER) with a grade of C (2.000) or higher No withdrawals from professional courses (all EXER courses)

Department of Public Health

1. Public Health - Health Sciences Concentration Cumulative and semester GPA requirement of 2.7 Science GPA requirement of 2.5 Sciences GPA includes: A&PI/II, Phy. Chem I/II, and Micro (with labs) and Biochemistry Minimum grade of C for professional major courses (all PUBH and HSCI.2220, HSCI.3080, HSCI.3400)

2. Public Health - Community Health/Health Promotion Concentration Cumulative and semester GPA requirement of 2.5 Minimum grade of C for professional major courses (all PUBH and HSCI.2220, HSCI.3080, HSCI.3400)

Solomont School of Nursing

• Cumulative and semester GPA requirement of 2.7
• Cumulative Science GPA requirement of 2.7 Sciences GPA includes: A&PI/II, Phy. Chem I/II, and Micro (with labs) and Patho.

• Minimum grade of C+ for Professional Major Courses (All NURS Courses)

First year students and first semester transfers from an outside institution not meeting the academic standards of their program will be placed on warning, and must meet with an advisor regularly in the next academic semester.

Students further along in their program who fail to satisfy these academic requirements will be dismissed from their respective programs. Such students may seek reinstatement to programs by filing a petition with the professional review committee of their respective departments. Students who are granted a probationary period must maintain all program criteria for remainder of time in their major. Failure to do so will result in dismissal from the program. Students whose petitions for reinstatement are denied may seek transfer to another major within the university if they qualify under university policies. Students who do not qualify for another major may be dismissed from the university at the time they are dismissed from the Zuckerber College of Health Sciences.
Degree Pathways

Degree Pathways are a semester-by-semester sequence of courses recommended for successful completion of a degree, diploma, credential or certificate from the university.

**Total Minimum Credits = 120**

1 Meets Core Curriculum Social Sciences Perspective (SS) requirement.

2 Can be replaced with CHEM.1110 (https://www.uml.edu/catalog/courses/CHEM/1110)
Chemistry I with Lab OR CHEM.1210
(https://www.uml.edu/catalog/courses/CHEM/CHEM.1230L)
Chemistry I with Lab.

3Can be replaced with CHEM.1120
(https://www.uml.edu/catalog/courses/CHEM/CHEM.1140L) General
Chemistry II with Lab OR CHEM.1220
(https://www.uml.edu/catalog/courses/CHEM/CHEM.1240L)
Chemistry II with Lab

Organic Chemistry is required for the MPH Coordinated Program in Dietetics; Organic lecture and lab may also be required for other graduate programs

Note: All students must come for pre-registration advising every semester.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) policy for further details. You should meet with your faculty advisor to determine how you will meet the Core Curriculum requirements.

Current UMass Lowell students should be using their Advisement Report in SiS (https://www.uml.edu/Enrollment/SiS/default.aspx). If you need assistance, please contact your adviser.

Restriction on off-campus study:

Be advised that any course taken at another institution must be formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the catalog policy (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

_Last Updated: 10/20/2021_
BMSC.1010 Biomedical Sciences Freshman Seminar - Credits: 1
This course is intended to provide the student with an introduction to the professions available within the field of biomedical sciences. Topics include history of the profession, state and federal laboratory regulations, professional organizations, ethics and professionalism, and an overview of each laboratory discipline. The role of the biomedical scientist in the clinical setting will be explored further through laboratory and industry tours.

BMSC.3100 Introduction to Laboratory Research - Credits: 3
This course prepares students in the Biomedical Sciences major for biomedical research. Students will learn basic and clinical research design and experimental aspects, applying critical thinking skills and engaging in outcome evaluation of research studies and quantitative data analysis and interpretation. Students will develop an understanding of the key differences between basic, clinical, and translational research and their implications and relation to diagnostic, treatment, and health management. The course will introduce students to literature review, identifying basic and key gaps and formulating key questions for scientific experimental pursuit. The course also reviews basic statistics research methods and the importance of significant statistical sampling.

BMSC.3220 Clinical Molecular and Cell Biology I - Credits: 3
The course is designed to provide a foundation in Molecular Biology and will cover structure, function, and regulation of proteins and nucleic acids. Other topics will include transcription, translation, DNA replication, DNA repair, genomics, and proteomics. A significant portion of the course will be dedicated to molecular biology techniques used to study proteins and nucleic acids. Emphasis will be placed on the application of molecular biology in biomedical research and healthcare.

BMSC.3240 Clinical Molecular and Cell Biology Laboratory I - Credits: 2
This laboratory course introduces basic molecular techniques and methodologies with hands-on experience. Starting with practices on information access from the NCBI databases, the students will learn techniques for proteins and nucleic acids extraction, quantification and separation, primer designs and PCR applications, gene cloning and expression, and principles of column chromatography for protein purification.

BMSC.3420 Organic Structures and Reactions II - Credits: 3
This course presents fundamental principles of Organic Chemistry and chemical reactions not covered in Organic Structures and Reactions I, with continued emphasis on concepts most relevant to the health professions. More detailed structure-stability-reactivity relationships, stereochemical principles, and reaction mechanisms are presented, including many relevant examples of the applications of Organic Chemistry in drug design and synthesis, as well as its central role on metabolism and pharmacology. The course reviews and reinforces the use of spectral techniques for the qualitative analysis of organic compounds and elucidation of chemical structures, with emphasis on infrared spectroscopy, mass spectrometry, and nuclear magnetic resonance spectroscopy.

BMSC.3440 Organic Structures and Reactions Laboratory II - Credits: 1
This course is designed to expose and train students interested in pursuing careers in health-related professions to more advanced laboratory techniques used in Organic Chemistry, building on the principles learned in organic structures and Reactions Laboratory I, including extraction, recrystallization, and chromatography. The synthesis, purification, and characterization of various classes of organic compounds will be carried out, including a multi-step synthesis. Laboratory experiments will be performed to exemplify and expand upon the principles covered in the Organic Structures and Reactions II lecture course.

BMSC.3700 Biomedical Sciences Junior Seminar - Credits: 2
This course introduces students to contemporary biomedical research projects within the field of biomedical sciences. Students will attend research seminars organized by the Biomedical Sciences faculty and evaluate each presentation. Students will also develop interviewing skills and techniques for future employment and graduate school opportunities.

BMSC.4110 OMICS: Essentials and Applications - Credits: 3
This course is designed to introduce the current OMICS technologies and their practical applications in human health and living environments. It provides the essential knowledge to explore OMICS technologies on person medicine. OMICS are emerging technologies for understanding the diversity and distribution of living organisms and the behavior of cells, tissues, organs, and the whole organism at the molecular level using methods such as genomics, proteomics, systems biology, bioinformatics, as well as the computational tools needed to analyze and make sense of the data. Each of these OMICS topics will be covered by lectures for general overview and
discussions on practical applications.

BMSC.4120 Clinical Molecular and Cell Biology II - Credits: 3

The course is designed to provide a foundation in cell biology and will primarily focus on essential structural components and organelles and their biological functions, as well as molecular signaling mechanisms underlying major cellular processes and intercellular communications. The course will also cover integration of cells into tissues, system cells, cell death, and cancer. Cell biology techniques will be studied and the application of cell biology in biomedical research and healthcare will be emphasized.

BMSC.4140 Clinical Molecular and Cell Biology Laboratory II - Credits: 2

This laboratory course introduces basic cell biology techniques and methodologies with hands-on experience. The course will focus on practices of tissue culture, fluorescent labeling, membrane surface and intracellular protein visualization, microscopy, flow cytometry, posttranslational protein modification assays, ion channel functional assessment, cell signaling research methods, signaling pathway analysis and modeling disease conditions in cell lines.

BMSC.4900 Advanced Biomedical Laboratory Techniques - Credits: 3

This advanced laboratory course is designed for students to reinforce and apply many of the concepts and hand-on laboratory techniques learned in all of the previous courses taken by Biomedical Sciences majors. Students will engage in a semester-long laboratory project or projects involving extensive hands-on experience, whose primary objective is to empower students with the necessary knowledge and experience to make them employable in their field of choice within the Biomedical Sciences upon graduation for the University.

MLSC.3110 Medical Bacteriology I (Formerly 36.311/512) - Credits: 3

A study of the cultural, biochemical, genetic, serological and pathogenic characteristics of disease producing microorganisms. Emphasis will be placed on the pathophysiology of the infectious diseases and their relationship to isolation and identification of the pathogenic microorganisms.

MLSC.3130 Medical Bacteriology Laboratory I (Formerly 36.313) - Credits: 2

This course is designed to introduce the student to pathogenic microorganisms, media and techniques used in the identification of these organisms. Emphasis will be based upon the isolation, identification and differentiation of pathogenic microorganisms common to man. In addition, quality control and antimicrobial susceptibility testing will be covered.

MLSC.3200 Clinical Hematology Practicum (Formerly 36.420 and MLSC.4200) - Credits: 2

Supervised clinical training in an affiliated clinical laboratory. Designed to reinforce knowledge and skills gained in lecture and laboratory and at the same time introduce the student to the daily activities of a clinical hematology laboratory. Emphasis will be placed on quality control, methodology, and clinical interpretation and correlation.

MLSC.3210 Clinical Hematology (Formerly 36.321) - Credits: 3

A study of the human hematopoietic system and its relationship to other organ systems. Discussions will include morphological and biochemical relationships of erythropoiesis and leukopoiesis in health and disease states. A study of the mechanics of blood coagulation as it relates to health and disease states will also be included.

MLSC.3230 Clinical Hematology Laboratory (Formerly 36.323) - Credits: 2

This course is designed to emphasize current hematological and coagulation procedures used in today’s clinical laboratory. The implications of these tests to diagnose, monitor and evaluate the various hematological disorders are also discussed.
MLSC.3340 Advanced Topics in Hemostasis  
(Formerly 36.434 and MLSC.4340) - Credits: 1

This course will constitute an in depth study of the hemostatic mechanism. Current research and case studies on the roles of vessel endothelium, platelet function, clotting procoagulants and fibrinolysis will be presented. Students will diagnose pathologic hemostatic states, such as hemorrhage or thrombophilia, due to deficiencies and impairments of these roles, including the impact of natural and acquired anticoagulants/inhibitors and anticoagulant therapy.

MLSC.3510 Clinical Chemistry I  
(Formerly 36.351) - Credits: 3

This course is designed to provide students with knowledge and theory of techniques used in the Clinical Chemistry laboratory for measurement of aminoacids, proteins, carbohydrates, and lipids in body fluids. Students will learn to use, interpret and evaluate the performance of these laboratory methods and develop the ability to recognize levels of these biochemical components in both normal and pathophysiological states. Examination and comparison of laboratory results will be used to diagnose or rule out disease. Techniques reviewed range from general to specific assays and from the classical to state-of-the-art methodologies. In addition, students will be able to assess the quality of laboratory generated values determine when values are invalid and suggest ideas to troubleshoot clinical laboratory methods.

MLSC.3530 Clinical Chemistry Laboratory I  
(Formerly 36.353) - Credits: 2

This course is designed to introduce the clinical techniques of biochemical measurement in body fluids. These techniques range from general to specific assays and from the classical to the up-to-date state of the art methodologies. Biochemical measurements of the following in the normal state and alterations due to pathophysiology are discussed: amino acids, proteins, carbohydrates and lipids. Quality control of assay procedures is emphasized.

MLSC.3610 Clinical Laboratory Instrumentation  
(Formerly 36.361) - Credits: 3

This course is designed to provide an in-depth knowledge of clinical chemistry laboratory instrumentation. Emphasis is placed on theoretical concepts, instrument components and design, calibration and troubleshooting of modern instrumentation, and analytical methodologies in the clinical laboratory. Additionally, qualitative and quantitative applications of instrumental techniques are covered. Computer applications are included where appropriate. The following spectroscopic instruments are studied: ultraviolet, visible and infra red absorption, fluorescence, turbidimetry and nephelometry, reflectance, flame emission and atomic absorption spectroscopy. Electrochemical methods of analysis are reviewed, including potentiometric techniques, voltammetry and coulometry. Chromatographic instrumentation and methods are discussed, such as column and thin layer chromatography, high pressure liquid chromatography, gas chromatography, and ion exchange chromatography.

MLSC.3730 Clinical Laboratory Sciences Seminar  
(Formerly 36.373) - Credits: 1

This course is designed to familiarize the student with different interview skills and approaches to resume writing, the process of implementing a laboratory information system, good education practices and team building skills. Students will evaluate current research designs and work in a team to create a presentation to express their opinions as educated consumers.

MLSC.3810 Molecular Diagnostics Laboratory  
(Formerly 36.381) - Credits: 2

The Molecular Diagnostics course is designed to instruct students in the principles and laboratory techniques used in Molecular Diagnostics in the clinical laboratory setting. An overview of nucleic acid structure, gene expression, and genetic diseases will be provided. Students will be given both lecture and laboratory instruction in basic molecular testing methodologies.

MLSC.4100 Clinical Microbiology Practicum  
(Formerly 36.410) - Credits: 2

Supervised clinical training in an affiliated clinical laboratory, designed to reinforce knowledge and skills gained in lecture and laboratory and at the same time introduce the student to the daily activities of the clinical microbiology laboratory. Emphasis will be placed on quality control, methodology and clinical interpretation.

MLSC.4110 Medical Mycology & Parasitology  
(Formerly 36.411) - Credits: 3

Intensive study of classification, morphology, physiology, genetics and ecology of medically important fungi and parasites. Emphasis on epidemiology, pathogenicity and diagnosis.

MLSC.4130 Medical Mycology & Parasitology Laboratory  
(Formerly 36.413) - Credits: 2

The laboratory is designed to emphasize principles and procedures used in the isolation, cultivation, and identification of medically important fungi and parasites.
MLSC.4150 Clinical Virology/Serology Lab (Formerly 36.415) - Credits: 2
This course is designed to survey pathogenic viruses emphasizing diagnosis of disease. Evaluation of new technology and diagnostic tests with reference to diagnosis and prognosis of disease are examined. In addition, this course is designed to instruct students in the principles and techniques used in the clinical immunology/serology setting. Students will become proficient in laboratory techniques such as immunodiffusion, ELISA, hemagglutination, and neutralization techniques used for immunodiagnosis.

MLSC.4160 Molecular Diagnostics Lab (Formerly 36.416) - Credits: 1
This course is designed to instruct students in the principles and techniques used in Molecular Diagnostics in the clinical laboratory setting. Students will be given both lecture and laboratory instruction in basic molecular testing methodologies. At the completion of this course, the student will have a basic understanding of molecular diagnostic principles and will be proficient in molecular diagnostic laboratory techniques including DNA extraction, PCR using SINEs and STRs, restriction enzyme digestion, ELISA, bacterial transformation, DNA sequencing and microarrays.

MLSC.4180 Medical Laboratory Science Senior Seminar - Credits: 2
This course is designed to familiarize the student with educational methodologies, teambuilding skills, and the principles and practices of research study design. Students will evaluate current research designs, and work in a team to create a presentation to express their opinions as educated laboratory consumers. In addition, this course will provide a review of the theoretical and practical knowledge required to successfully pass the ASCP Board of Certification Exam in Medical Laboratory Science. Case studies and different types of questions integrating all areas of the clinical laboratory will be utilized to review the important topics in each discipline.

MLSC.4300 Clinical Immunohematology Practicum (Formerly 36.430) - Credits: 2
Supervised clinical training in an affiliated clinical laboratory is designed to reinforce knowledge and skills gained in lecture and laboratory and, at the same time, introduce the student to the daily activities of the clinical immunohematology laboratory. Emphasis will be placed on quality control, methodology and clinical interpretation and correlation.

MLSC.4310 Clinical Immunohematology (Formerly 36.431) - Credits: 3
Lecture and case study discussions look at the major red cell antigen/antibody systems that are of importance in understanding transfusion therapies, blood antigen and antibody testing, compatibility testing, and pathological diseases. Emphasis is on differentiation and clinical significance of each system. Donor selection regulations, component preparation, adverse transfusion reactions, and hematherapy will also be discussed.

MLSC.4330 Clinical Immunohematology Laboratory (Formerly 36.433) - Credits: 2
Practical laboratory experience in blood banking, illustrating the concepts stressed in the lecture including ABO and Rh typing, identification of other red cell antigens, antibody screening and identification, direct antiglobulin testing, crossmatching, and other techniques performed in the Clinical Immunohematology laboratory.

MLSC.4500 Clinical Chemistry Practicum (Formerly 36.450) - Credits: 2
Supervised clinical training in an affiliated hospital clinical laboratory. Designed to reinforce knowledge and skills gained in lecture and laboratory and at the same time introduce the student to the daily activities of the clinical laboratory. Emphasis will be placed on quality control, methodology and clinical interpretation and correlation.

MLSC.4510 Urinalysis Practicum (Formerly 36.451) - Credits: 0
A one-week clinical rotation in an affiliated laboratory designed to give the student experience in microscopic examination and evaluation of urine sediments. Emphasis is on correlating physical and chemical characteristics with sediment evaluation and diagnoses as well as on quality control, methodology, and clinical interpretation and correlation. Additional routine tests of a physical and chemical nature will be performed and demonstrated.

MLSC.4520 Clinical Chemistry II (Formerly 36.452) - Credits: 3
This course will provide students with knowledge and theory of techniques associated with determinants of acid-base balance, blood gases, electrolytes, osmolality, hemoglobin, toxicology, therapeutic drug monitoring and endocrinology. Students learn to interpret and evaluate the performance of these laboratory methods and develop the ability to recognize levels of these biochemical components in both normal and pathophysiological states. Laboratory techniques range from...
general to specific assays and from the classical to state-of-the-art methodologies. In addition, students will be able to assess the quality and validity of laboratory generated values, determine when values are invalid and suggest ideas to troubleshoot methodologies. Students will also be able to produce and analyze statistical data for use in correlation, comparison and evaluation of laboratory techniques. Prerequisite: 35.331

MLSC.4530 Laboratory Management and Ethics (Formerly 36.453) - Credits: 2

This course will acquaint the student with the many managerial, educational, technical, and administrative theories and practices, as well as moral and ethical issues that may confront the health care professional functioning within a clinical or research laboratory setting. In addition, it will present the varied career opportunities that are available for graduates.

MLSC.4540 Clinical Chemistry Laboratory II (Formerly 36.454) - Credits: 2

This course, a continuation of 36.353, is designed to instruct the student in the analytical procedures and methods currently used in the clinical laboratory. Manual and automated methods utilized in the assessment of such topics as acid-base balance, porphyrins, toxicology and vitamins will be introduced. In addition, methods associated with the routine examinations of urine and other body fluids will be introduced. Quality control, laboratory safety and professional performance are emphasized.

MLSC.4610 Clinical Virology - Credits: 1

This course is designed to introduce the student to the field of Clinical Virology. Viral structures, physiology, and pathogenesis will be discussed. Emphasis will be placed on viral diseases and the laboratory techniques used to identify them.

MLSC.4740 Senior Seminar (Formerly 36.474) - Credits: 1

This course is designed to familiarize the student with different types of questions used in the national certification exams and to give the student the opportunity to practice taking mock certification examinations.

NUTR.1100 Nutrition and Wellness (Formerly 35.210 and NUTR.2100) - Credits: 3

This course is an introductory course to the science of nutrition as it applies to everyday life and health. Focus will include the six major nutrients: carbohydrates, lipids (fats), protein, vitamins, minerals, and water and their importance in the human body. Digestion, absorption, and metabolism in the human body will be introduced. The course will also examine energy balance and weight management as they relate to nutrition and fitness. The impact of culture, demographics and ethnicity on nutritional intake will be discussed. Students will explore the relationship between nutrition and health through laboratory experiences. Students should not be taking NUTR.1100 if they already took NUTR.2060.

NUTR.2050 Introduction to Nutritional Science (Formerly 35.205) - Credits: 3

This course introduces students to the major in Nutritional Science. Objectives of the major are covered along with beginning nutritional and food science principles, history of the profession, career options, and legal aspects of practice as a nutrition educator. An integrated survey of nutrition science as it relates to human physiological chemistry, food chemistry and biochemistry will also be discussed. This course will include guest speakers from within the department and outside the university. This course will be restricted to nutritional science majors.

NUTR.2060 Human Nutrition (Formerly 35.206) - Credits: 3

This course provides an overview of nutrition and the components of a nutritious diet during the various stages of the life cycle. It emphasizes the impact of nutrition on the major contemporary health problems in the United States. Nutrition issues, trends and research, and their effect on society and the legislative process will be explored.

NUTR.2700 Introduction to Food Safety - Credits: 3

This course focuses on food safety from a ‘farm to fork’ perspective. The class will cover a comprehensive overview of the food safety system addressing the biological, chemical and physical agents with emphasis on domestic food-borne outbreaks, public health significance, disease control, and the microbial spoilage of foods. The history and fundamental principles of food safety will be addressed including the risk and hazard analysis of different foods and the important advances in food system that are necessary for controlling hazards in the modern food industry.

NUTR.3010 Food Science with Lab - Credits: 3

This course explores the basic principles of food science such as: food preparation, food ingredients and food preservation, regulatory agencies and food regulations, and concepts that relate to food safety, recipe alteration and menu design. The laboratory component demonstrates and illustrates the chemical and physical properties of foods including the effects of processing, ingredients, and storage on food quality and...
nutrient retention.

NUTR.3310 Practice of Nutrition Professional (Formerly NUTR.4310) - Credits: 3

This course provides students with the knowledge and application of the skills of the dietetics professional and the governance of nutrition and dietetics practice. Student will learn the importance of quality management of food and nutrition services and the management theories and business principles required to deliver programs and services. Students will also learn the fundamentals of public policy. This course will have an emphasis on preparing the student for supervised practice necessary for a career as a Registered Dietitian Nutritionist.

NUTR.3360 Life Cycle Nutrition (Formerly 36.336) - Credits: 3

Biology of the life cycle including development, growth, maturation, and aging and its impact on nutritional requirements of humans from the zygote to the elderly is considered. How to meet these nutritional requirements is discussed relative to the feeding issues and context of each major life stage. Course emphasizes the critical analyses of beneficial and adverse outcomes of various nutrient intakes and dietary patterns of the nutritional status and well-being through integration of nutrition and other health sciences in understanding nutritional needs during the life cycle. Analysis of cultural, environmental, psychosocial, physical, and economic factors affecting nutritional status through the lifespan will also be discussed. Methods of nutritional assessment for each stage of the life cycle will be examined.

NUTR.3450 Community Nutrition (Formerly 36.345) - Credits: 3

This course explores the role of the nutrition professional in community needs assessment, intervention development and evaluation, and in forming domestic nutrition policy. Nutrition problems in contemporary communities and of selected target groups in the United States and in developing countries are examined. Programs and strategies to meet nutrition needs outside the acute care setting, such as nutrition education and food assistance are explored. Local, state, and national nutrition policy and initiatives in nutrition will also be examined. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA) and Social Responsibility & Ethics (SRE).

NUTR.3710 Nutrition and Metabolism (Formerly 36.371) - Credits: 3

This course is advancement into the biochemical and physiologic process through which the nourishment of the human organism is accomplished and how the interactions among nutrients, other aspects of the environment, and the body result in perturbations affecting human health. The process of human nourishment proceeds within the context of an organism with an intricate structure, unique composition, and specific capacities for adaptive change. Basic information from many disciplines relating to body function and structure will be summarized. This will serve as setting the stage for detailed discussions, which describe the nutritional biochemistry and metabolism of the body for the normal state, and for states where nutrient availability is altered or disease is imposed. Prerequisites: 35.206

NUTR.3720 Body Diversity and Health (Formerly 36.372) - Credits: 3

This class will advance the understanding of prevention and treatment of chronic diseases where body size is a significant risk factor. A comprehensive overview of the physiological and social determinants of energy balance will be provided. Methods to complete nutrition assessments and deliver culturally sensitive and unbiased interventions will be reviewed. Evidence based individual and population level strategies that promote healthy habits, a positive body image, and eliminates health disparities will be compared and contrasted to scientifically unsupported approaches.

NUTR.4060 Biochemistry of Lipids (Formerly 36.406) - Credits: 3

This advanced course in the nutritional biochemistry and physiology of lipids will detail the role of lipids in the normal and pathological processes at both the cellular and whole organism level. Topics will range from general discussions of the digestion, absorption and transport of lipids to the role of eicosanoids and lipid soluble antioxidants during normal and diseased states, such as atherosclerosis, diabetes and hypertension. Subject matter will also include a discussion of the various interventions for the prevention and treatment of certain of these disease states. There will also be discussion of the current issues in lipid nutrition.

NUTR.4630 Vitamins and Minerals (Formerly 36.463) - Credits: 3

Detailed analysis of the digestion, absorption, transport, and intermediary metabolism of vitamins and minerals as essential nutrients. The chemical and biochemical characteristics of vitamins and minerals are examined to account for the physiological functions.

NUTR.4650 Lab Methods in Nutrition Assessment (Formerly 36.465/565) - Credits: 3
This course provides the student the opportunity to assess nutritional status using several modern analytical methods. The course uses spectrophotometry, HPLC and automated procedures to assess the status of vitamins, lipids, iron, glucose, and insulin. The student will learn the mathematical calculations needed for the methods. This course enables the student to appreciate how nutrient analysis is designed and implemented in the analytical laboratory.

NUTR.4720 Nutrigenetics (Formerly 36.472) - Credits: 3

Regulation of eukaryotic gene expression by specific nutrients, hormones, and metabolites will be discussed including transcriptional, post-transcriptional, and translational mechanisms with emphasis on disease development or prevention. Application of material will include determining how human dietary requirements are affected by gene variants and inherited biochemical characteristics. This course will enable students to link their knowledge of nutrition with the growing discipline of the effects of diet on the human genome and specific hereditary diseases.

NUTR.4810 Medical Nutrition Therapy I(Formerly 36.481) - Credits: 3

This course is intended to provide students with current knowledge and application in dietary prevention, treatment, and long-term management of obesity, diabetes, cardiovascular diseases, and upper gastrointestinal diseases. Topics include nutrition counseling and communication skills, professional ethics, medical terminology, clinical laboratory values, dietary menu planning and analysis in specific situations, evaluating nutritional status, case studies for these diseases. This course will stress the steps in the nutrition care process, determine appropriate methods for screening patients for nutritional risk, and help the student assess the nutritional status of patients.

NUTR.4820 Medical Nutrition Therapy II(Formerly 36.482) - Credits: 3

This course is a continuation of Medical Nutrition Therapy I that will provide students with current knowledge and application in dietary prevention, treatment, and long-term management of patients with trauma, burns, HIV, cancer, liver, lower gastrointestinal diseases, celiac disease, and renal diseases. Topics include nutrition counseling and communication skills, professional ethics, medical terminology, clinical laboratory values, dietary menu planning and analysis in specific situations, evaluating nutritional status, case studies for these diseases, and will examine enteral and parental nutrition support for critically ill patients. Students will also develop a basic knowledge related to the principles of fluid and electrolytes balance as well as acid-base balance as they relate to the nutritional care of patients/clients.

NUTR.4830 Senior Research in Nutrition I - Credits: 1

Senior Research in Nutrition I will introduce concepts and application of research through critical exploration of the research process, research methodology, and ethics. Students will begin to critically review literature relevant to their field or interests and practice written scientific communication skills related to research.

NUTR.4940 Directed Research in Nutrition(Formerly 36.494) - Credits: 3

Students with their faculty advisor structure a research project in the area of nutrition. A paper embodying the results of the project will be prepared.

NUTR.4960 Senior Research in Nutrition(Formerly 36.496) - Credits: 3

Continuation of 36.494. Meets Core Curriculum Essential Learning Outcome for Applied & Integrative Learning (AIL), Information Literacy (IL), and Written & Oral Communication (WOC).
HSCI.1010 Human Anatomy and Physiology I  
(Formally 35.101) - Credits: 3

This course provides a basic knowledge of the structure and function of the human body. An overview of the general organization of the body introduces the course. Following a discussion of basic human chemistry, the anatomy and physiology of cells, tissues, organs, and organ systems are studied with special emphasis placed on homeostasis and interaction among the various systems. The topics treated are body plan, chemistry, cytology, histology, the integumentary system, the skeletal system, the muscular system, and the nervous system. Clinical applications will be presented.

HSCI.1011 Medical Terminology for Health Professionals - Credits: 1

This course is designed to introduce entry-level students of any discipline to the fascinating language of Medical Terminology. Medical terminology is a system of words that are used to describe the human body, including its anatomy, physiology, disease processes, and treatments. In the course, students will explore the roots, prefixes, and suffixes that form the basis of language across careers in health sciences. The content of this course is relevant to students interested in pre-health disciplines (premed, pre-dental, pre-veterinary), as well as careers as physicians assistants, nurses, public health professionals, Emergency Medical Technicians, or health scientists.

HSCI.1020 Human Anatomy and Physiology II  
(Formally 35.102) - Credits: 3

A continuation of the basic knowledge of human structure and function. The topics treated are cardiovascular system, lymphatic system, respiratory system, endocrine system, digestive system, metabolism, urinary system, and reproductive system.

HSCI.1030 Human Anatomy and Physiology Laboratory I  
(Formerly 35.103) - Credits: 1

Laboratory exercises are designed to reinforce didactic material by providing hands-on experience with the subject matter. Students actively participate in simple chemical analysis, microscopic observations, and studies of anatomical models and preserved specimens. Students perform simple physiological tests on themselves and work in small groups to discuss conclusions.

HSCI.1040 Human Anatomy and Physiology Laboratory II  
(Formerly 35.104) - Credits: 1

Laboratory exercises are designed to reinforce didactic material by providing hands-on experience with the subject matter. Students actively participate in simple chemical analysis, microscopic observations, and studies of anatomical models and preserved specimens. Students perform simple physiological tests on themselves and work in small groups to analyze results and discuss conclusions.

HSCI.1041 Topics in Health  
(Formerly 30.104) - Credits: 3

This introductory course is designed to provide students with the opportunity to explore a variety of topics and issues in health through reading and discussing recently published articles. Using classroom discussions as the major format for this course, students will be encouraged to think critically about current topics and issues in health to strengthen their analytical skills. This course will also assist students in developing oral presentation and communication skills that are necessary in the health field.

HSCI.1050 Health Pathways Freshman Seminar - Credits: 1

This seminar course introduces Health Pathway students to UMass Lowell and the Zuckerberg College of Health Sciences. Students will engage in learning activities that promote success in the program by familiarizing themselves with academic policies, resources, and positive time management, communication and study skills. Students will also explore careers in all majors in the college and other health-related fields through Interprofessional learning while being introduced to the concepts of diversity, professionalism and ethical conduct.

HSCI.1051 Interprofessional Education First Year Seminar - Credits: 1

This seminar introduces First Year health science majors to UML and the Zuckerberg College of Health Sciences. Students will engage in learning activities that promote success in the program by creating a positive transition to college and sense of community, building and establishing confidence, familiarization with academic policies, resources, and time management, goal setting, study and test-taking skills. This course will also provide a foundation for beginning health science students to gain an understanding of the importance of interprofessional collaboration across a wide spectrum of health professions. Through experiential activities, key themes focused on interprofessional communication, collaboration, teamwork, and professionalism will be incorporated throughout the course.

HSCI.1060 ZCHS Transfer Student Seminar - Credits: 1
This Transfer Student Seminar introduces new students to the Zuckerberg College of Health Sciences to the University, College, and the major the have declared. Transfer students bring unique experiences, and those experiences will be utilized to assist students in their successful transition into the UMass Lowell academic community. The seminar will focus on expectations for students in a research university setting, as well as the policies, resources, and advanced skills in time management, communication, and exam preparation that are essential for student success.

HSCI.1200 Life Skills (Formerly 30.120) - Credits: 3

This course is designed to assist new students adjust to, and succeed in college and beyond. Course subject matter has been created in conjunction with the National Collegiate Athletic Association (NCAA). This course has been specifically designed to meet the needs of the student-athletes who are current members of our campus community. Successful completion of this course will give the participants the skills necessary to be successful students, athletes and citizens academically, socially, personally and professionally.

HSCI.2040 Introduction to Exercise Physiology (Formerly 30.204) - Credits: 3

This course serves as an introductory course to the field of Exercise Physiology. It is designed as a program foundation to the profession and to professional behavior. Students will be exposed to what happens in both the fitness centers and in the cardiac or pulmonary rehabilitative facilities. The course will serve as a precursor to the remaining upper division major courses.

HSCI.2060 Pandemics: How Do They Occur? - Credits: 3

This course focuses on the global challenge posed by infectious diseases. In the past 50 years, many previously unknown infectious diseases have emerged, while others have reemerged at an unprecedented rate. Despite tremendous strides in science, technology, and medical advances, and primary prevention strategies, infectious disease continue to plague humanity. This course will feature the global challenges posed by select pathogens. To do this, we will explore pandemics through a few different lenses. We will review the sources of and risk factors that lead to pandemics, and methods to prevent and control infectious disease outbreaks from becoming pandemics. Infectious diseases discussed in this course include: Cholera, Ebola, HIV, Influenza, SARS, MERS, COVID-19, among others.

HSCI.2100 Clinical Calculations (Formerly 30.210) - Credits: 1

This elective course is designed for students beginning the nursing program. It reviews the mathematics necessary to compute drug calculations using dimensional analysis. This course covers the metric system of weights and measures. The focus of the course is on the computation of drug dosages for oral and parenteral medications with emphasis on the application of skills necessary to calculate intravenous infusions and medications.

HSCI.2110 Basic Clinical Microbiology & Pathology (Formerly 35.211) - Credits: 3

Studies the fundamentals of microbiology with major emphasis on structure, function, growth, metabolism, and classification of clinically important microorganisms. The human body's response to invading microbes and an introduction to the ecological aspects of microorganisms in the environment with particular stress on their significance, activities (beneficial and detrimental) and control measures will also be studied.

HSCI.2130 Basic Clinical Microbiology & Pathology Laboratory (Formerly 35.213) - Credits: 1

Laboratory investigations of basic properties and characteristics of microorganisms are conducted. Students will perform commonly used techniques for collecting, handling, and studying clinically important microorganisms.

HSCI.2140 Careers in Health (Formerly 30.214) - Credits: 1

This introductory survey course is designed to give those students interested in health careers the opportunity to explore a variety of career path options in the health field. The goal of this course is to help students recognize their interests, knowledge, skills, and aspirations so that they can begin to make educated career decisions, The knowledge students will gain throughout this course will help them discern their own career path in the health care industry.

HSCI.2220 Health and Disease Across the Lifespan (Formerly 30.222) - Credits: 3

This course will introduce the basic principles that promote health of individuals throughout the lifespan. Physiological, socioeconomic, economic, and behavioral factors that impact health, disease, and quality of life across the lifespan will be examined. Health assessment tools will be reviewed. The course emphasizes the role of nutrition and physical activity for health promotion and disease prevention across different life stages and the impact of aging on health and disease. Major causes of morbidity and mortality in the United States will be discussed.
HSCI.2510 Physiological Chemistry I (Formerly 35.251) - Credits: 3

This course provides a foundation in basic chemistry for students majoring in the Health Sciences. Basic concepts covered include: properties of matter, energy, atomic and molecular structure, isotopes and radioactivity, chemical bonding, chemical formulae and reactions. Quantitative aspects of chemical processes, chemical equilibrium and the behavior of gases, including blood gases and their transport are discussed. Properties of water and solutions are studied and include units of concentration, osmosis, osmolality, and physiological fluid and electrolyte balance. The chemistry of acids, bases and buffers is reviewed with emphasis on physiological buffer systems. Quantitative aspects, acid/base balance, compensatory mechanisms and elementary diagnosis are discussed. The chemistry of inorganic trace elements and their physiological roles are investigated. Concepts of organic chemistry are introduced, including the structure and function of carbon, isomerism and the properties and selected reactions of the major functional groups important in human biochemistry.

HSCI.2520 Physiological Chemistry II (Formerly 35.252) - Credits: 3

This course is designed to provide a foundation in basic biochemistry for students majoring in the Health Professions. Selected concepts in organic chemistry are integrated into this framework. Aspects of amino acid and protein structure are studied. The structure and function of enzymes, their effects on reaction energetics and dynamics and the diagnostic uses of enzyme assays in clinical medicine are covered. The plasma proteins, hemoglobin, and the structure and function of miscellaneous cellular proteins are reviewed. The chemistry of the nucleic acids, protein anabolism and catabolism are studied along with selected metabolic disturbances and genetic disease. The structure and chemical properties of the simple and complex carbohydrates and lipids their metabolic pathways and cycles, and selected pathologies are studied in detail. Diagnostic tests relating to carbohydrate and lipid abnormalities are included. The course concludes with a study of chemical communication mechanisms, which includes neurotransmitters, hormonal secretions, and immunoglobulins.

HSCI.2530 Physiological Chemistry Laboratory I (Formerly 35.253) - Credits: 1

Laboratory experiments are conducted to complement the material covered in 35.251. Exercises dealing with properties of matter, chemical equations, qualitative analysis, energy, osmosis, chemical equilibrium and acids/bases/buffers will be performed. The qualitative properties of alcohols, aldehydes, ketones, acids and esters will be explored.

HSCI.2540 Physiological Chemistry Laboratory II (Formerly 35.254) - Credits: 1

Laboratory experiments are conducted to complement the material covered in 35.252. The chemistry of the basic biochemical molecules will be explored, including proteins, enzymes, carbohydrates, lipids, and nucleic acids. Selected aspects of metabolism and the assay of clinically significant materials will be studied.

HSCI.3050 Exercise Physiology Lecture (Formerly 30.305) - Credits: 4

This course is designed to enable students to understand the acute and chronic physiologic effects of exercise on the human body. Topics will include bioenergetics, cardiopulmonary and cardiovascular physiology, neuromuscular physiology, special populations, and exercise prescription for apparently healthy athletic and clinical populations. Special topics in exercise physiology and environmental physiology will also be covered.

HSCI.3060 Introduction to Gerontology (Formerly 30.306) - Credits: 3

This course examines human aging from a multidisciplinary and developmental perspective. The course will focus on the adult years of the life span. The social-psychological factors involved in adjustments to the aging process, to retirement, to family, to leisure, to aloneness, to death and bereavement will be discussed together with such special concerns of the elderly as widowhood, finances, religion, sexuality and health problems. Rehabilitative strategies such as remotivation and reality orientation are included.

HSCI.3080 Global Health (Formerly 30.308) - Credits: 3

The focus of this course is on examining health issues from a global perspective including issues related to maternal and child health, aging, infectious diseases, sanitation, and health inequality. Nutritional and environmental health issues in diverse societies are analyzed. Social determinants of health and access to health care in developing and developed countries are emphasized. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

HSCI.3090 Universal Design in the Promotion of Health (Formerly 30.309) - Credits: 3

This is a three-credit interdisciplinary undergraduate blended course (face-to-face and online). The is course is designed to examine the principles of universal design and investigate challenges of equity, access and inclusion in healthy communities. Undergraduate students from a variety of
disciplines will examine universal design and Assistive Technology (AT) that enhances the participation of individuals with a physical, emotional, sensory or intellectual and cognitive disability in education, community development, health care, recreation and public policy. The course reviews design concepts and the use of Assistive Technology as it relates to education, communication, vocation, recreation, and mobility for individuals with disabilities. Laws focusing on assistive technology in the home, school, community, and the workplace will be examined. The course explores both 'low tech' and 'high tech' types of assistive technologies that are available to support people with disability, based on the ICF model of disability. Interaction with users of assistive technology is accomplished through an experiential learning project. Students will engage in a team project that completes a thorough examination of a particular access or functional challenge and the use of universal design and AT to increase participation and minimize the effects of the person’s impairments.

HSCI.3190 Pathophysiology (Formerly 30/33.319) - Credits: 3
This course provides an overview of the dynamic aspects of disease processes as they present in major body systems.

HSCI.3200 Legal Issues in Nursing (Formerly 30.320) - Credits: 3
This course provides an overview of legal issues nurses encounter in clinical practice. Case studies will be used to identify common risks to safety and quality of care. To examine the legal process when lawsuits are filed and to identify preventive strategies which improve quality of care and therefore, decrease legal risks for nurses.

HSCI.3220 Independent Study Health Promotion (Formerly 30.322) - Credits: 1
This course focuses on a health promotion project. Must have faculty approval for the course. Can be for 1, 2, or 3 credits.

HSCI.3400 IPE Research Methods - Credits: 3
This course introduces critical evaluation of the current literature, the research process, and research study design and methodology and ethics. The importance of research across interdisciplinary health fields will be explored. Students will practice critical thinking and oral and written communication skills related to health research.

HSCI.3500 Human Biochemistry (Formerly 36.350) - Credits: 3
This course is an in-depth study of biochemical substances and their reactions in the body, with major emphasis placed on metabolism at the cellular level and examined in the tissues of the various organs where these reactions occur. Correlation of biochemical processes underlying pathologic conditions will be made whenever practical.

HSCI.4020 Global Health Experience (Formerly 30.402) - Credits: 3
The Global Health Experience provides an experiential learning experience in health within a country outside of the United States. Students will study the health issues of a given country while examining the socio-cultural, economic and environmental determinants of health within that society. The strengths and weaknesses of the existing health care system will be analyzed. Students will explore the culture, environment, and health care system under the direction of School of Health and Environment faculty.

HSCI.4100 Interprofessional Approaches in Community Health - Credits: 3
This is an advanced course in interprofessional education and collaborative practice that provides a critical foundation for current work in community health, including clinical and public health fields. It allows students to increase their understanding of how each profession contributes to the team by exploring current health issues. It provides opportunities to practice effective communication and team collaboration in decision making related to health and wellness. It is designed to provide hands on experience for students to deliberately and intelligently work together in clinical and community health settings and simulations. Key concepts include importance of best practices in professionalism, roles and responsibilities, teamwork, communication, and ethics in all health-related careers.

HSCI.4200 Digital Health - Credits: 3
This course will explore the field of digital health and the application of digital technology to improving health outcomes in patients. Students will learn about the types of digital health interventions (biosensors, mobile apps, telemedicine, text messaging, etc). They will also discuss how these technologies are currently being used to deliver personalized medicine and enhance patient care (i.e. cardiovascular monitoring, smoking cessation, healthier eating, diabetes, etc). Upon completion of the course, students will be able to identify emerging areas of digital health interventions and assess how these new technologies might impact health.

HSCI.4910 Directed Study (Formerly 30.491) - Credits: 1-9
Directed Study
HSCI.4992 Interdisciplinary Multi-Topic - Credits: 3

This inter-professional experiential learning experience is designed to provide hands on experience for health science undergraduate students to deliberatively and intelligently work together in a health care setting. Key concepts include the importance of best practices for professionalism, roles and responsibilities, teamwork, communication, ethics, and collaborative practice in health care.

PUBH.2031 Intro to Pub Hlth Informatics and info Systems - Credits: 3

This course is an introduction to public health informatics and information systems. Topics include the evolution of public health information systems, public health data sources, core concepts and terminology in health informatics, and ethics. The office of the National Coordinator for Health Information Technology standards for public health information technology will be introduced. Students will identify data sources and learn basic data visualization skills to describe a public health problem.

PUBH.2090 Technical Writing in Public Health - Credits: 1

The intent of this course is to prepare students for conveying Public Health technical communications, i.e., the presentation of specialized information in an accessible way to a variety of audiences. Specifically, the course will focus on the process of writing (including the planning, drafting, and revising stages) and looking carefully at the work that goes into the final polished product. As collaboration is often a key part of the professional realm, students will spend much of the semester working with their classmates, which will include participating in brainstorming sessions, providing constructive criticism, and preparing their assignments.
PHRM.1010 Introduction to the Pharmaceutical Industry - Credits: 3

The purpose of this introductory course is to provide an overview of the pharmaceutical industry. The student will become acquainted with the discovery and development processes required to bring a new therapeutic agent to the market. This course discusses current theoretical, practical, regulatory, and professional issues in the pharmaceutical industry.

PHRM.3100 Introduction to Drug Design - Credits: 3

This course will provide an overview of how novel pharmacologically active molecules are discovered and designed to treat human disease. Topics will include drug discovery, molecular design and redesign, synthetic strategies of drug molecules, structure-activity relationships (SAR), drug interactions with their targets, pharmacokinetics (PK) and pharmacodynamics (PD), and ethical considerations.

PHRM.3200 Molecular Pharmacology - Credits: 3

This course is designed to give students an understanding of the molecular basis of drug action. Upon completion of this course, students will be able to describe receptor-ligand interactions, signal transduction pathways, the different classes of target biomolecules for drugs and how genetic variability influences drug action.

PHRM.4100 Basic Pharmaceutics - Credits: 3

This course is designed to give students an understanding of the basic physical chemistry needed to determine drug dosing and knowledge of how drugs are delivered through the body. Upon completion of this course, students will be able to describe how drugs are formulated, manufactured and how to ensure sterile manufacturing and delivery of these drugs.

PHRM.4600 Pharmacokinetics and Drug Metabolism - Credits: 3

This course focuses on the study of the biochemical and physiological effects of drugs and the mechanisms of their actions. The quantitative aspects of drug absorption, distribution, metabolism, and excretion will be explored. The philosophy of pharmacokinetic modeling and its application in practice will be introduced. An overview of the structure, function and regulation of major drug metabolic enzymes and transporters will also be emphasized.
Degree Pathways

Degree Pathways are a semester-by-semester sequence of courses recommended for successful completion of a degree, diploma, credential or certificate from the university.

Exercise Science (3-year)

- Clinical Option fall 2022 and beyond

Exercise Science (4-year)

- Clinical Option fall 2021 and beyond fall 2020 - spring 2021
- Exercise and Fitness Management Option fall 2020 and beyond fall 2018 - spring 2020
- Exercise Physiology fall 2016 - spring 2018

Suggested Degree Pathway for Exercise Science - Clinical Option

For students who entered fall 2021 and beyond.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) policy for further details. You should meet with your faculty advisor to determine
how you will meet the Core Curriculum requirements.

Current UMass Lowell students should be using their Advisement Report in SiS (https://www.uml.edu/Enrollment/SiS/default.aspx). If you need assistance, please contact your adviser.

**Restriction on off-campus study:**

Be advised that any course taken at another institution must be

formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf)

prior to enrollment. See the

catalog policy (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

for details.

*Last Updated: 8/06/2021*
Exercise Science Admissions Requirements

Freshman Admission Requirements to the Exercise Science Program (Clinical Option or Exercise & Fitness Management Option)

- High school GPA of 3.25 or better.
- Completion of college prep courses including: English, biology and chemistry.
- Recommended: high school pre-calculus or calculus, and physics.
- Combined SAT scores totaling at least 1080 (mathematics and verbal).
- Evidence of good health through a physical exam, which attests to the student’s ability to actively and safely participate in all phases of laboratory work.

Transfer Admission Requirements to the Exercise Science Program

UMass Lowell (UML) students and students from other colleges or universities are invited to apply to the Exercise Science BS program. Requirements include:

- A cumulative GPA of 2.7
- A science GPA of 2.7 in at least one, two-semester required science sequence of either: Anatomy and Physiology I and II, Physiological Chemistry or Chemistry I and II, Physics I and II, or Biology I and II.

Students must have successfully completed at least one of the two-semester prerequisite science sequences identified above, and be on track to complete all prerequisite science course sequences by the completion of their fourth semester at UML. This means that students must complete all prerequisite science courses prior to beginning professional courses (EXER.xxx (https://www.uml.edu/catalog/courses/EXER)) in the Junior year of the curriculum (see degree pathway).

We strongly recommend that transfer students complete college level pre-calculus or calculus prior to transfer.

ES to Doctorate (DPT)

Students who meet the qualifications as incoming freshmen are notified in their letter of acceptance to the university from Admissions. Students must be enrolled in the Clinical Option to be eligible. Students will also obtain real-world experience by completing a required 35 hours of physical therapy observation prior to your senior year. The UMass Lowell DPT program does not offer deferred acceptance. All accepted students must begin matriculation the immediately subsequent summer term.

The program requirements are:

- Completion of the B.S. in Exercise Science program with an overall GPA of 3.40 or higher
- Completion of the DPT pre-requisite science courses outlined below with an earned GPA of 3.40 or higher:
  - Anatomy & Physiology I & II, with labs
  - Chemistry I & II, with labs
  - Physics I & II, with labs
  - Exercise Physiology lecture
  - Kinesiology lecture

Your class GPA will be calculated after the end of your junior year of studies and again after your senior year is completed. GPA calculation will occur once more at the end of your senior year prior to matriculation into the program.

For more information, contact the Undergraduate Admissions (https://www.uml.edu/admissions/contact/default.aspx).
EXER.1010 Strategies for Academic Success in Exercise Science (Formerly 38.101) - Credits: 1

This seminar course introduces Exercise Physiology (EP) students to UMass Lowell, the Zuckerberg College of Health Sciences, and the Exercise Physiology program. Students will engage in learning activities that promote success in the program by familiarizing themselves with academic policies, resources, and positive time management, communication and study skills. Students will also explore careers in Exercise Physiology and other health-related fields through interprofessional learning while being introduced to the concepts of diversity, professionalism and ethical conduct. All exercise physiology undergraduate courses (EXER) are restricted to EP majors.

EXER.2020 Introduction to Exercise Science (Formerly 38.202) - Credits: 3

This course will provide a broad overview of the various fields and career options within Exercise Science. Course content will include a history of the profession, potential career and graduate studies options, the legal and ethical aspects of practice, and an introduction to basic fitness terminology and principles using ACSM guidelines. Students will have the opportunity to network with guest speakers for all different careers and explore various environments in which Exercise Physiologists work.

EXER.2170 Research Methods in Exercise Science - Credits: 3

This course involves an in-depth study of current research methods and topics with specific applications to the field of Exercise Physiology. The content includes the sources of data acquisition, research design, testing procedures, and treatment of data. Each student must participate in a senior research project utilizing information gained from the lecture portion of the class. All 1st 2nd and 3rd year course work in the exercise physiology major. All exercise physiology undergraduate courses (number 38) are restricted to EP majors only. Meets Curriculum Essential Learning Outcome for Information Literacy (IL) and Quantitative Literacy (QL).

EXER.3010 Junior Seminar (Formerly 38.301) - Credits: 1

The Junior Seminar, offered spring semester to Exercise Physiology majors, will orient students to information required for their Practicum experience during their Senior Year.

EXER.3050 Exercise Physiology (Formerly 38.305) - Credits: 4

This course will examine the short and long term effects of exercise of the oxygen transport systems, including understanding the concepts of physiological and metabolic functioning of the human body during aerobic physical activity, exercise, sports performance and training. Students taking this course and its lab co-requisite are advised that the capability to exercise moderately and maximally will be necessary.

EXER.3070 Exercise Physiology Laboratory (Formerly 38.307) - Credits: 1

This course offers students the opportunity to apply, test and evaluate physiological concepts and skills discussed in the lecture as it related to the aerobic systems and training.

EXER.3150 Kinesiology (Formerly 38.315) - Credits: 3

This course combines the study of mechanics, kinematics, kinetics, anatomy and neuromuscular physiology to teach the examination and evaluation of human movement. The major focus of the course is in qualitative evaluation of movement. Topics also include quantitative evaluation, body mechanics, posture and gait evaluation with a focus on identification of abnormal movement patterns.

EXER.3170 Kinesiology Laboratory (Formerly 38.317) - Credits: 1

This course should be taken concurrently with EXER.3150. This course is designed to practically apply topics discussed in kinesiology lecture. Students are given the opportunity to engage in various activities that will allow them to observe and analyze the numerous factors involved in human motion and the impact of those factors on human performance. Students are given the opportunity and encouraged to explore areas of personal interest within the goals and objective of the course.

EXER.3350 Sport and Exercise Biomechanics - Credits: 4

This course will examine the mechanical laws and principles applied to the human body including forms of motion, linear and angular kinematics/kinetics. The concepts studied will include qualitative and quantitative analysis of sport techniques and general movement patterns. There will be in-class lab activities to prepare the student to use a scientific approach for analyzing exercise and sports activities.

EXER.3560 Pharmacology (Formerly 38.356) - Credits: 3

An introduction to the biochemistry and physiological actions of various pharmaceuticals. Fundamental concepts will include
drug receptors, drug receptor interactions, pharmacokinetics, enzyme induction, drug metabolism, drug safety and effectiveness and idiosyncratic reactions. Several major disease states, and the common agents used for treatment will be presented including: autonomic (central nervous system stimulants, cholinergic, adrenergic, and muscarinic agents); Neuropharmacology (Alzheimer’s and Parkinson’s diseases, major depressive disorder, anxiety and insomnia); Cardiovascular conditions (hypertension, hypercholesterolemia), Endocrinology (adrenal steroids anti-hyperglycemic agents); Analgesia (opioid and non-opioid), Antibacterial agents, and Respiratory conditions.

EXER.4060 Foundations of Strength and Conditioning (Formerly 38.406) - Credits: 4

This course is the second of a two-part series in exercise physiology designed to study the physiological effects of exercise on the human body. It will call upon the knowledge gained in Anatomy and Physiology, Biochemistry, Kinesiology, and Exercise Physiology. The course covers a variety of topics including: physiological adaptations to resistance training, resistance training concepts and methods to include periodization and principles of test selection and administration, concepts of flexibility, dynamic warm-ups, plyometrics, speed, agility and speed-endurance development, basic concepts of rehabilitation and reconditioning, exercise prescription and programming for healthy populations, and the effect of performance-enhancing drugs on performance. This course will cover (cont’d).

EXER.4080 Foundations of Strength and Conditioning Laboratory (Formerly 38.408) - Credits: 1

This course must be taken concurrently with EXER.4060, Foundations of Strength and Conditioning. The laboratory experiences allow students to observe the concepts discussed in the lecture co-requisite course; develop the psychomotor skills necessary for practical applications; work collaboratively in groups; and develop skills in scientific method including written communication. The course is organized to develop students' critical thinking as an active participant in class. Students are expected to develop practical skills in the laboratory consistent with current standards of practice, learn to administer exercise tolerance tests, interpret and present exercise test data, and develop simple assessment and treatment programs for all clients. (cont’d)

EXER.4120 Clinical Practicum I and II (Formerly 38.412) - Credits: 4

This course is an off-campus experience in either a cardiac/pulmonary rehab clinical facility or in a fitness setting. Students experience practical applications of the concepts and theories learned in the classroom settings. Strength and conditioning, research or industry related setting, or other setting appropriate to the particular student’s interests.

EXER.4170 Research Methods in Exercise Physiology (Formerly 38.417) - Credits: 3

This course involves an in-depth study of current research methods and topics with specific applications to the field of Exercise Physiology. The content includes the sources of data acquisition, research design, testing procedures, and treatment of data. Each student must participate in a senior research project utilizing information gained from the lecture portion of the class. All 1st 2nd and 3rd year course work in the exercise physiology major. All exercise physiology undergraduate courses (number 38) are restricted to EP majors only. Meets Core Curriculum Essential Learning Outcome for Information Literacy (IL) and Quantitative Literacy (QL).

EXER.4180 Senior Seminar (Formerly 38.418) - Credits: 3

This course is specifically designed to enhance the practicum experience in the senior year.

EXER.4200 Advanced Study in Exercise Science (Formerly 38.420) - Credits: 3

This course is a capstone course in Exercise Science. Students summate and synthesize classroom and clinical experiences in Exercise Science in the preparation of a final project.

EXER.4210 Directed Study Health Promotion (Formerly 38.421) - Credits: 3

This course is designed for independent study opportunities, including but not limited to directed study, directed research, and Honors College theses and projects. These learning opportunities provide students with meaningful opportunities to work directly with a faculty member on individually designed content that integrates didactic knowledge throughout their program of study. The course focuses on broadening the student’s area of interest, expertise, and career choices.

EXER.4220 Exercise Prescription & Programming (Formerly 38.422) - Credits: 3

This course provides an essential foundation for exercise prescription and programming, and sound educational practice. Factors that impede or enhance exercise compliance and progress are explored. Clinical teaching skills, safety, and professional behavior are also addressed.

EXER.4240 Motor Control & Learning - Credits: 3
This course provides an in-depth presentation of the behavioral and neuroscientific foundations of human movement control, coordination, and the learning of movement skills. Topics include an introduction to the cellular basis of neurophysiology, discussion of the contributions of the sensory and motor systems, and learning the major theories of motor control and the acquisition of motor skill and their importance in rehabilitation, teaching and sport performance. The ultimate goal is for students to develop a unified conceptual framework for motor control and learning and how these relate to the optimization of intervention strategies.

**EXER.4250 Clinical Exercise Physiology - Credits: 3**

This course will examine the pathophysiology and exercise considerations associated with a variety of diseases and disorders. Students will utilize case studies to apply the principles of exercise testing, prescription, and programming within these medically stable special populations. These diseases and special populations may include (but are not limited to): older adults, arrhythmias, obesity, hypertension, asthma, COPD, post-myocardial infarction, diabetes, arthritis, osteoporosis, cancer, cerebral palsy, musculoskeletal concerns, developmental disorders, and intellectual disabilities.

**EXER.4260 Motor Control and Learning Laboratory - Credits: 1**

This laboratory course provides a hands-on experience with the concepts and topics centered around the behavioral and neuroscientific foundations of human movement control, coordination, and the learning of movement skills. It is designed to examine the principles of motor learning by examining physiological, psychological, and neuromotor factors that affect motor control, the acquisition of motor skills and performance. Students will learn to apply motor learning and control skills to coaching movement and physical activity.

**EXER.4280 Exercise Prescription & Programming Laboratory - Credits: 1**

This laboratory course will expand upon topics taught in the lecture, examining methods for assessing and improving various elements of health and fitness, including (but not limited to): body composition, aerobic fitness, muscle strength, muscle power, muscle endurance, flexibility, balance, and movement. Students will demonstrate competency of administering a variety of health and fitness assessments and master utilizing information gleaned from these assessments to appropriately prescribe exercise programming for individuals.

**EXER.4300 Exercise is Medicine - Credits: 3**

Healthcare is a business that requires students and workers who understand its complexity and constant changes. Health promotion experts are positioned to lead the charge a reducing healthcare costs and improving patient and client outcomes, in the community or the workplace. This student-driven capstone course will focus on the concepts and skills necessary to develop, promote and implement effective health and wellness programs where the central tenets are "Exercise is Medicine" and "Exercise is Business Relevant". Students will learn how to bridge the gap between the fields of exercise, health, wellness, and management and how to successfully communicate their ideas to a variety of business, sport, and health organizations.
PUBH.1000 Environmental Health Seminar (Formerly 31.100) - Credits: 0
This required, non-credited seminar for Freshman and Sophomore Environmental Health Students explores current affairs and controversies in environmental health theory and practice. Readings and outside speakers will supplement short lectures, faculty and student-led discussions.

PUBH.1010 Public Health Seminar (Formerly PUBH.101) - Credits: 1
This course is designed to orient first year Public Health students to the College of Health Sciences and the University as a whole. The general purpose of the course is to help students identify their areas of interest in Public Health and teach students valuable skills that will maximize their likelihood of success in achieving their academic and professional goals. Areas of priority will be time management and study skills, critical thinking, and communication.

PUBH.1021 Introduction to Public Health (Formerly 30.102) - Credits: 3
Public health topics, both historical and contemporary are of importance to all citizens and to societal decisions. This survey course provides a foundation for understanding public health through exposure to current health care and policy issues viewed through the perspective of multiple disciplines. Methodology for understanding population health and developing critical thinking and decision-making skills in the analysis of public health issues using a population-based perspective will be developed. The course will provide an ecological understanding of the causation and prevention of disease with an emphasis on health issues that affect society as a whole.

PUBH.2010 Community Health and Environment (Formerly 31.201) - Credits: 3
This course emphasizes the concepts, philosophy, and principles of public health and their relationship to physical, mental, and social well-being of the community. The focus is on the prevention of disease, the promotion and maintenance of health, and the provision of environmental and personal health services through organized community effort.

PUBH.2030 Technology in Public Health (Formerly 31.203) - Credits: 3
A lecture and hands-on course designed to help students better understand the role of computers and information technology in public health. Students will be guided through the use of various software applications that enhance public health efforts, including: word processing, database design and management, spreadsheets, presentations, geographical information systems (mapping health data), and internet-based applications for social networking to address health-related issues, as well as other uses. Discussions of what the future may hold for health information technology will also be included. Hands-on assignments will help students become more proficient with PC-based software.

PUBH.2040 Intro to Health Promotion (Formerly 31.204) - Credits: 3
This course focuses on the role health education plays in the development of healthful patterns of living. A philosophy of health education emphasizing holistic health will be generated. The organization and administration of school, community, health care facility, and workplace health education programs are introduced.

PUBH.2050 Social Determinants of Health (Formerly 31.303, and PUBH.3030) - Credits: 3
This course introduces students to the concept of social determinants of health, and strongly emphasizes the influence of social power relations on public health. There is a focus on how social, economic and political factors affect the level and distribution of individual, community, and population health. Students will examine health and social inequalities and explore potential solutions for their elimination.

PUBH.2060 Research Methods in Public Health (Formerly 31.206) - Credits: 3
Introduction to research methodologies used in the study of community and environmental health problems. Students will discuss actual research studies conducted by UMASS Lowell faculty in the College of Health Sciences.

PUBH.2070 The U.S. Healthcare System (Formerly 31.321 and PUBH.3210) - Credits: 3
This introductory course focuses on the organization, financing and delivery of healthcare in the United States. Students will learn about the public and private sectors of the healthcare system and examine the effects of market competition and government regulation. Students will be exposed to healthcare systems of other countries. Students will also explore major issues currently facing providers, hospitals as well as the pharmaceutical and health insurance industries in the United States.

PUBH.2080 Principles of Environmental Health Science (Formerly PUBH.208) - Credits: 3
This is a survey course that provides an overview of the rapidly growing field of environmental health, through an introduction to the links between environmental stressors and impacts on public health. The course will explore human and industrial activities that impact on health such as overpopulation, food production, air and water pollution, waste, toxic substances, pests, and global climate change. The course will also examine the types of diseases and illnesses that result from environmental impacts. These impacts have multiple causes and understanding these can in turn provide clues as to the most effective prevention options. Students will explore topics of interest in greater detail through short writing assignments. Meets Core Curriculum Essential Learning Outcome for Social Responsibility &Ethics (SRE).

PUBH.2110 Sustainable Development (Formerly PUBH/S7.211) - Credits: 3

This course examines workplace and regional factors that shape the prospects for sustainable prosperity and worker and community empowerment. The course begins by reviewing recent trends in the distribution of income and wealth and the industrial structure of the New England economy. The historical dynamics shaping work organization and regional development are examined. Several industry case studies are selected because of their importance to the regional and national economy. The case studies provide focus for studying the strategic choices made by firms in mature industries and newly emerging regions; the basis of competitive advantage for Japanese firms and the response of American rivals; and the influence of the product cycle and regional institutions on capture or retention of emerging and mature industries. The final section of the course focuses on the prospects for sustainability of the organization of production and its environmental impact, incentives for skill development and technological innovation, and shared prosperity. A central course objective is to foster an understanding of the links between the workplace and region in the pursuit of sustainable development and shared prosperity.

PUBH.3010 Introduction to Biostatistics (Formerly 19.301) - Credits: 3

This course covers the basic tools for the entry, analysis, and presentation of data in all areas of public health. Central to these skills is assessing the impact of chance and variability on the interpretation of research findings subsequent recommendations for public health practice and policy. Specific topics include tools for describing central tendency and variability in data; methods for performing inference on population means and proportions; and statistical hypothesis testing. Software will be used to analyze health datasets, including relational databases and create graphical presentations of study results. Coursework will also focus on the interpretation of statistics in the health science literature and other communication.

PUBH.3011 Program Planning in Health Promotion (Formerly 31.301) - Credits: 3

This course is the first of a two course series designed to introduce undergraduate Public Health students studying Community Health and Health Promotion to the concepts and principles underlying the planning principles geared toward promoting health and preventing disease in a variety of settings. The course emphasizes practical utility of the concepts as they relate to the students’ future health education/promotion professional activities. The foundation of the course will be the skills necessary to conduct a needs assessment and develop a comprehensive program to address a health concern affecting a specific population in a particular setting.

PUBH.3020 Health Communication (Formerly 31.302) - Credits: 3

This course explores the uses of a variety of established and emerging health communications strategies, techniques, and modalities. Students will consider the ethical considerations pertinent to the use of assorted health communications approaches in health promotion. The course discusses the concepts of health literacy and eHealth literacy. Awareness and sensitivity toward cultural, ethnic, and religious diversity will be particularly emphasized when discussing various communication techniques in relation to particular health issues. Meets Core Curriculum Essential Learning Outcome for Written and Oral Communication (WOC).

PUBH.3040 Politics and Advocacy in Public Health (Formerly 31.304) - Credits: 3

Public health is inherently political because it attempts to characterize and prevent societal factors influencing disease and well-being. As a result, public health professionals must be effective advocates for policies and actions that improve people’s health. This course introduces students to the political underpinnings of public health. By studying the political contexts of public health issues, students will explore the interface of government, law economic interests, and social movements for public health. They will learn about the role of advocacy in promoting, implementing and sustaining effective public health policy.

PUBH.3050 Introduction to Epidemiology (Formerly 31.305) - Credits: 3

This course is designed to introduce basic epidemiological methods used in the study of current major health problems. Content includes explanation of the scope and focus of epidemiology, simple measures of disease frequency and association used in the study of the distribution and
determinants of disease, types of epidemiological study designs, and practical applications. Emphasis on interpretation of epidemiological information and application of findings. Prerequisite: Community Health and an elementary statistics course. Required for seniors in Community Health Education; open by permission to other upper division students in Health Professions. Meets Core Curriculum Essential Learning Outcome for Information Literacy (IL) and Quantitative Literacy (QL).

PUBH.3060 Community Health Assessment (Formerly 31.306 Socio-Ecological Health Assessment) - Credits: 3

This course focuses on building health assessment skills of Public Health professionals. The course will introduce students to concepts of Community Health Assessments and guide students to practice skills necessary to conduct them. The course will emphasize the importance of using assessment results to make programmatic and policy decisions and will direct participants in how to communicate findings to allow policymakers, health professionals, and members of the public to take action to improve Public Health. Meets Core Curriculum Essential Learning Outcome for Critical Thinking/Problem Solving (CTPS).

PUBH.3070 Introduction to Public Health Policy (Formerly PUBH.221 and PUBH.2210) - Credits: 3

One of the core functions of Public Health is developing policies and plans that support individuals and community health efforts. This course introduces students to the legal, ethical, economic and regulatory dimensions of healthcare and public health policy. Students will explore local, state and national governmental agency roles in public health policy. Students will learn about the implications of laws and regulations that impact Community Health and Safety.

PUBH.3100 Infectious Disease (Formerly PUBH.310) - Credits: 3

This course introduces students to the fundamentals of communicable diseases and how humans and the environment affect their distribution and impact. The course will provide an overview of infectious diseases, how these diseases affect humans, vectors and sources of these diseases. The course will also cover infectious disease surveillance, outbreak investigation and response as well as prevention planning and bioterrorism.

PUBH.3160 Environmental Health in Practice (Formerly 31.316/19.507) - Credits: 3

Through a combination of class lectures, field trips, and a service learning project, this course is designed to introduce students to the daily responsibilities of an environmental health professional. The class will provide in-depth knowledge and hands-on understanding of topics such as food safety, indoor air quality, water quality, waste water disinfection, and chemicals management. Through lectures and guest speakers students will understand the challenges facing environmental health professionals and the resources available to them. Students will undertake a final group project for a health board or other organization.

PUBH.3710 Chemicals and Health (Formerly 31.371) - Credits: 3

Provides a broad overview of how the design, manufacture, use and disposal of chemicals and chemical products affect health and ecosystems. Provides an in-depth overview of how chemicals are monitored in the environment (including biomonitoring), how their risks are characterized, and the prevention of chemical risks through safer chemical design. Meets Core Curriculum Essential Learning Outcome for Written &Oral Communication (WOC).

PUBH.4010 Public Health Senior Seminar - Credits: 3

The Public Health Senior Seminar prepares public health students for their capstone experience. Students will reflect on their career plans and their current state of preparedness for the next steps in professional development. This course provides an overview of the current state of various professions in public health and the future of public health practice and ethics, both nationally and internationally. Meets Core Curriculum Essential Learning Outcome for Social Responsibility and Ethics (SRE).

PUBH.4011 Implementation and Evaluation in Health Promotion - Credits: 3

This course is the second in a two course series designed to introduce undergraduate Public Health students studying Community Health and Health Promotion to the concepts and principles surrounding implementation and evaluation of programs geared toward promoting health and preventing disease in a variety of settings. This course emphasizes practical utility of the concepts as they relate to the students’ future health education/promotion professional activities. The foundation of the course will be the skills necessary to develop an implementation and evaluation strategy for a planned health promotion initiative, taking into consideration the phases of implementation and evaluation, ethical considerations, and resources and skills required to implement and evaluate a successful health promotion program.

PUBH.4030 Mind, Body and Health (Formerly 31.403) - Credits: 3
The interconnectedness of the mind, body, and spirit is integral to achieving "wellness". It is also important to acknowledge the impact each of these three aspects of wellness has upon each of the others. The growing body of research indicating the significant effects of things such as stress, anger, optimism, and healthy relationships on health status will be analyzed and evaluated. Practical strategies related to health advisement will be shared and experimented with during the semester. In this senior level course, we will explore these and many other areas of mind, body, and spirit awareness that are critical to consider when conducting health education programs.

PUBH.4050 Communication Techniques in Health Promotion (Formerly 31.405) - Credits: 3

This course focuses upon the communication techniques and mass media approaches necessary to promote and implement effective health promotion programs and activities. Awareness and sensitivity toward cultural, ethnic, and religious diversity will be particularly emphasized when discussing various communication techniques in relation to particular health issues. Meets Core Curriculum Essential Learning Outcome for Written & Oral Communication (WOC).

PUBH.4090 Service Learning in Community Health (Formerly 31.409) - Credits: 3

This course is designed to serve as a service learning experience in the fall semester of students' senior year in Health Education. Students will be expected to participate in a pre-determined community health project happening in the City of Lowell for a minimum of 40 hours. During the course of this experience, students will provide the community health organization with their time, knowledge, and effort, and will, in return, gain tremendous experience in the organization, development, implementation, and/or evaluation of Community Health Education and Promotion Projects. Collaboration with various professionals involved in the programs and projects will certainly add to students' understanding of what a Health Educator does! An integral piece of this service learning experience will be the bi-monthly seminar geared toward asuring the connection between the community experience and the theoretical and academic framework from which it is derived. Through the use of readings, discussions, student presentations, and guest speakers, students will gain wonderful experience in terms of what it means to "build the capacity of a community". Meets Core Curriculum Essential Learning Outcome for Applied & Integrative Learning (AIL).

PUBH.4100 Public Health Capstone (Formerly 31.410) - Credits: 6

This capstone is the culminating experience for all students in the BS in public health that allows students to integrate, synthesize and apply the knowledge of public health gained throughout their undergraduate program. It can be structured as a cumulative, integrative and scholarly experience or an applied experience or inquiry project. Each student will craft an experience that is appropriate for his /her professional goals in aspirations. Projects may include internships, research papers, honors theses, or other appropriate activities that apply a range of public health competencies and skills. Students create a portfolio of work and/or research poster for the experience demonstrating proficiency in the domains of public health.

PUBH.4130 Public Health Administration - Credits: 3

The class will introduce students to the basics of public health program administration including planning, evaluation, and management. Through lectures, guest seminars, site visits and research, students will build and understanding of different types of agencies and organizations involved in public health administration and their roles and responsibilities. They will learn the steps of development, implementation, and evaluation of a public health program at a local or state agency. Students will also study basics of the management of public health agencies, including staff management, budgeting, stakeholder engagement, conflict resolution, and risk communication. Students will be required to apply concepts learned in class to a real life public health problems.

PUBH.4140 Program Management in Health (Formerly 31.414) - Credits: 3

The concepts of program management including budgeting, managing partner relationships, grant writing, and managing technology resources, and quality assurance which are essential functions for individuals working in public health agencies, are presented. Students will be expected to develop a grant proposal for an agency. This course is an integrative experience and resources form all other relevant coursework will be called upon.

PUBH.4160 Environmental Health Practicum (Formerly 31.416) - Credits: 10

This course is designed to provide students real world practical experience in the field of environmental health, as final preparation for their BS Degree. This 32 hour/week internship opportunity situates students in an environmental health setting most conducive to his or her needs and interests. Placements can vary from health boards and health departments to non-profit agencies, government agencies, university research institutes, and industry. Students work directly with an academically and professionally qualified preceptor to assure their progress in the field. The faculty supervisor is responsible for periodic meetings and correspondence to also assure appropriate development.
PUBH.4930 Directed Study (Formerly 31.493) -
Credits: 1-6
NURS.1010 Strategies for Acad Success (Formerly 33.101) - Credits: 1

This introductory course will assist nursing students to learn strategies for creating greater academic, professional, and personal success. Specific attention will be given to exploring the profession of nursing, academic integrity, goal setting, time management, critical thinking and communicating with others. Consideration will be given to note taking skills, test reading and studying, writing, test-taking strategies, library use and research techniques, wellness and stress management, and campus resources.

NURS.1030 Academic Strategies Portfolio Seminar (Formerly 33.103) - Credits: 1

Nursing students with a diploma in nursing, associate degree in nursing, or second baccalaureate degree will submit a portfolio to demonstrate how they have met the course objectives. The portfolio will show evidence of goal setting and time management, UML library orientation for literature searches, understanding of academic integrity and writing and referencing using APA style. Students will participate in seminar(s) on communication, cultural sensitivity , and conflict resolution.

NURS.2100 Nursing Fundamentals (Formerly 33.210) - Credits: 2

This course enables students to begin their basic knowledge of nursing. The course provides an organizing framework, based on Gordon's functional health patterns, that is strictly nursing. Therapeutic nursing interventions are incorporated into the more detailed discussion of each of the functional health patterns. A separate laboratory component is included for demonstration and practice of nursing interventions. At the conclusion of this course students will demonstrate competency in performing basic nursing intervention for individuals in a clinical setting.

NURS.2100L Nursing Fundamentals Lab (Formerly 33.210L) - Credits: 1

NURS.2110 Nursing Assessment and Skills (Formerly 33.313 and NURS.3130) - Credits: 2

This course introduces students to the foundations of communication, nursing assessment, and psychomotor skills guided by standards of nursing practice. Emphasis is placed on the integration and application of these skills through the use of critical thinking.

NURS.2110L Nursing Assessment and Skills Lab

(Formerly 33.313L/ NURS.3130L) - Credits: 1

This laboratory course introduces students to the foundations of communication, nursing assessment, and psychomotor skills guided by standards of nursing practice. Emphasis is placed on the integration and application of these skills through the use of critical thinking.

NURS.2120 Introduction to Nursing Practice (Formerly 33.212) - Credits: 3

Nursing as a health profession is introduced in this foundation course. The course is organized using functional health patterns. Within the context of the American Nurses Association Standards of Clinical Practice, standards of professional performance are introduced and standards of care are emphasized. Students, at the completion of this course, will demonstrate an understanding of the nursing process and competencies to perform basic nursing interventions in a laboratory and a clinical setting. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

NURS.2120L Introduction to Nursing Practice Laboratory (Formerly 33.212L) - Credits: 1

This course enables students to apply their basic theoretical knowledge of nursing in a laboratory and clinical setting. The course is organized using functional health patterns. At the conclusion of this course, students will demonstrate competency in performing basic nursing interventions for individuals in a clinical setting.

NURS.2120R Introduction to Nursing Practice Medication Calcs (Formerly 33.212R) - Credits: 1

This course reviews the mathematics necessary to complete drug calculations. This course reviews the mathematics necessary to complete drug calculations using dimensional analysis. It covers the metric and household system of weights and measures. The focus of the course is on the completion of drug dosages for oral and parenteral medication.

NURS.2180 Pharmacology for Nursing Practice (Formerly 33.318/NURS.3180) - Credits: 3

This course provides an overview of pharmacology as it relates to nursing practice. Students connect knowledge regarding the nursing process to pharmacotherapy throughout body systems and the lifespan.

NURS.3010 Research in Nursing and Health Care (Formerly 33.301) - Credits: 3
This course provides an overview of the research process. Health care research interests and the methodology of various disciplines are examined. Through a review of research studies, students examine the basic steps in the process of research. Ethical problems in the world of research are explored and students learn how research influences health care practice and policy. Meets Core Curriculum Essential Learning Outcome for Information Literacy (IL).

NURS.3060 Health Assessment (Formerly 33.306) - Credits: 3

This combined didactic and laboratory course builds on the students' professional nursing education and experiences through the inclusion of health assessment information as applied to the professional nursing role in the community setting. Emphasis is on systematic data collection including thorough history taking, physical examination, screening and risk-factor recognition.

NURS.3070 Concepts for Baccalaureate Nursing (Formerly 33.307) - Credits: 3

This course is designated as a transition course for registered nurse students pursuing a baccalaureate degree with a major in nursing. This course aims to refine critical thinking skills and analyze nursing's unique contribution to health care. Consideration is given to the interrelationships of theory, research, and practice. Special emphasis is placed on the concepts of health promotion and risk reduction as they relate to individuals and families who are at risk for or experiencing health problems. This course includes a practicum component that focuses on the development of interventions to promote the health of individuals and families at risk.

NURS.3080 Health Promotion in Nursing (Formerly 33.308) - Credits: 2

This course is designed as a transition course for registered nurse students pursuing a baccalaureate degree with a major in nursing. It introduces the theory and research related to the concepts of health promotion and risk reduction. These concepts are presented as essential components of professional nursing practice. This course includes a clinical practicum which focuses on the development of interventions to promote the health of individuals and families. This course aims to refine critical thinking skills and analyze nursing's unique contribution to health care. Consideration is given to the interrelationships of theory, research and practice.

NURS.3090 Health Promotion in Nursing Practice Practicum (Formerly 33.309) - Credits: 3

This course is a clinical practicum which focuses on the development of interventions to promote the health of individuals and families. This course aims to refine critical thinking skills and analyze nursing's unique contribution to health care. Consideration is given to the interrelationships of theory, research and practice.

NURS.3100 Health Promotion and Risk Reduction Families I (Formerly 33.310) - Credits: 5

This course focuses on health promotion and risk reduction with young individuals and families who are responding to potential or actual physical and psychosocial health problems. Content is centered on holistic nursing care from a lifespan perspective beginning in pregnancy and ending with adolescence.

NURS.3110 Health Promotion and Risk Reduction of Families I Practicum (Formerly 33.311) - Credits: 4

This community-based clinical course is focused on health promotion of young families including childbearing women, infants, children, and adolescents. A portion of the clinical experience consists of establishing a relationship by the student with a family. First four semesters of nursing curriculum. Meets Core Curriculum Essential Learning Outcome for Applied & Integrative Learning (AIL).

NURS.3120 Concepts of Professional Nursing (Formerly 33.312) - Credits: 2

Nursing as a health profession is introduced in this foundation course. The concepts of health promotion, communication, critical thinking, culture, nursing theory and research, and therapeutic nursing interventions are presented. Within the context of the American Nurses’ Association Standards of Clinical Nursing Practice, standards of professional performance are introduced and standards of care are emphasized. First four semesters of nursing curriculum.

NURS.3140 Health Promotion and Risk Reduction Families II (Formerly 33.314) - Credits: 5

This course focuses on health promotion and risk reduction with adults and their families who are responding to potential or actual biopsychosocial health problems. Content is centered on holistic nursing care throughout the adult lifespan.

NURS.3150 Health Promotion and Risk Reduction of Families II Practicum (Formerly 33.315) - Credits: 4

In this clinical course, students provide nursing care to adult clients and their families. The focus is the development of specifically tailored therapeutic interventions to promote the health of these clients and assist with potential or actual health

NURS.3200 Community-Focused Health and Policy (Formerly 33.320) - Credits: 3
This course provides a foundation to community health nursing with the community, family and individual as Client. This course presents an overview of the US health care delivery system with an emphasis on the role of government in healthcare, Medicaid, and current efforts at healthcare reform.

NURS.3210 Independent Study (Formerly 33.321) - Credits: 1
Independent Study on a topic chosen by the student and agreed on by the faculty member.

NURS.3220 Independent Study (Formerly 33.322) - Credits: 3
NURS.3230 Independent Studies (Formerly 33.323) - Credits: 3
Independent Studies

NURS.3240 Community-Focused Project Implementation (Formerly 33.324) - Credits: 2
This course focuses on improving the health of one aspect of the community. Students analyze health problems in identified communities. Interventions for community as client are developed and implemented and the effectiveness of applied interventions in evaluated.

NURS.3250 Community-Focused Project Dissemination (Formerly 33.325) - Credits: 1
This one credit course focuses on the dissemination of the results of a community based program. Students develop presentations which describe methods used to identify, intervene and evaluate the health problems of a community. Students are required to present their findings at a formal dissemination venue identified by faculty.

NURS.4100 Health Promotion and Risk Reduction of Families III Practicum (Formerly 33.411) - Credits: 4
In this clinical course, students provide nursing care to adults in adult inpatient and outpatient settings. The focus of the experience is the development of specifically tailored therapeutic interventions in providing care to adults with acute and chronic illness.

NURS.4120 Community Health and Health Policy (Formerly 33.412) - Credits: 4
This course analyzes the development of policy and its impact on the health of populations. Students apply epidemiology and community health science to population-based nursing practice. Students identify a community health problem that can be addressed through health promotion activities.

NURS.4130 Role Transition (Formerly 33.413) - Credits: 4
This capstone course focuses on the transition to the professional nursing role. Content includes professional issues, trends, and leadership and management principles which impact on nursing practice. Students analyze nursing practice in relation to the standards of professional performance. Meets Core Curriculum Essential Learning Outcome for Written & Oral Communication (WOC).

NURS.4140 Role Transition Practicum (Formerly 33.414) - Credits: 6
During this clinical experience the student works collaboratively with nurse preceptor and other members of the health team. The student becomes increasingly self-directed in carrying out the professional nursing role.

NURS.4150 Community Health Project (Formerly 33.415) - Credits: 2
The student applies the ANA Public Health Nursing Scope and Standards of Nursing Practice with community as client. Teams of students utilize community assessment data collected from previous semester to develop, implement and evaluate a community health promotion activity.

NURS.4200 Leadership in Nursing (Formerly 33.420) - Credits: 3
This course focuses on leadership roles, responsibilities, and opportunities for the professional nurse. Course content includes professional issues, trends, and leadership and managerial principles pertinent to healthcare and nursing practice. Students explore professional perspectives, norms,
and ethical standards essential in values-driven management and leadership.

NURS.4210 Selected Topics in Nursing (Formerly 33.421) - Credits: 3

Selected Topics in Nursing is a course for advanced undergraduates in the RN-BS option. The content will vary from semester to semester depending on the research interest of the faculty member(s) teaching the course.
Programs

The Kennedy College of Sciences offers undergraduate programs leading to the degree of Bachelor of Science with majors in Biology, Chemistry, Computer Science, Environmental Science, Mathematics, Meteorology and Atmospheric Science, and Physics. All departments in the college also offer graduate degrees (for further information see the graduate catalog).

The Bachelor of Science degree is designed to provide a specialized education in one or more of the basic sciences. Specialized Bachelor of Science curricula, which are offered in areas of science and mathematics, provide opportunities for major and minor program options but afford greater opportunities for major specialization than are permitted in comparable Bachelor of Arts curricula.

Minor areas of study (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) are offered by all science departments. College majors may also wish to consider minors offered by the social sciences, humanities, and fine arts departments, and specialized course sequences of the Francis College of Engineering.

Below is a list of undergraduate majors and minors offered in the Kennedy College of Sciences.

Majors

- Biology: B.S. General OptionBioinformatics
  OptionBiotechnology OptionEcology,Evolution and Organismal Biology Option
- Engineering Physics: B.S. Electrical and Computer Engineering OptionMechanical Engineering Option
- Physics: B.S. General OptionAstronomy and Astrophysics OptionRadiological Health Physics Option

Minors

- Biology (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
- Chemistry (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
- Climate Change and Sustainability (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
- Geology (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
- Mathematics (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
- Physics
- Robotics (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
- Sound Recording Technology (through Music Department) For Computer Science Majors (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

College of Sciences
Degree Pathways are a semester-by-semester sequence of courses recommended for successful completion of a degree, diploma, credential or certificate from the university. Students should follow the degree pathway appropriate to their catalog year. A student’s catalog year is typically defined by the date of their entry into the University of Massachusetts Lowell.

**Biology**

- **General Option**
  - fall 2020 - spring 2021 (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

- **Bioinformatics Option**
  - fall 2020 - spring 2021 (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

- **Biotechnology Option**
  - fall 2020 - spring 2021 (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

- **Ecology, Evolution and Organismal Biology Option**
  - fall 2020 - spring 2021 (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

- **Ecology Option**
  - fall 2020 - spring 2021 (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)

**Chemistry**

- **General Option**
  - fall 2017 and beyond

- General Option
  - fall 2015 and beyond
  - fall 2013 - spring 2015
- Astronomy and Astrophysics Option fall 2021 and beyond
- Radiological Health Physics Option
  - fall 2018 and beyond
- Photonics Option fall 2013 - spring 2015
Major

Students majoring in Biology prepare for a variety of careers which contribute to our understanding of basic life processes and the solution of problems related to health and the environment. Many students graduating with Bachelor’s degrees are employed by institutions involved in bio-medical research or environmental field studies, while others become science educators. Degree recipients often choose to continue their education in professional (medical, veterinary, dental) schools or by matriculating into masters and doctoral programs. Since their training in science is integrated with an education in humanities and social sciences, graduates are not only prepared to excel in expanding the base of knowledge in their field of expertise, but are able to understand and respond to social and ethical issues arising from these advances.

The undergraduate program ensures a strong foundation in supporting science and mathematics and provides the essential background needed for a career in modern biology. Several of upper-level electives are available, and the curriculum is sufficiently flexible so that students may tailor it to meet their specific career goals and entrance requirements of professional schools and postgraduate programs. Although it is not required, students are encouraged to conduct original research as a capstone to their undergraduate experience. Students are able to obtain credit toward graduation for research, but more importantly, many research projects lead to student-authored publications in professional journals and presentations at scientific meetings.

The Bachelor of Science in Biology offers four options:

- **General Option**
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
- **Bioinformatics Option**
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
- **Biotechnology Option**
  (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf)
- **Ecology, Evolution and Organismal Biology Option**

**Pre-Medical and other Pre-Professional Programs**

The curriculum in the Department of Biological Sciences prepares many of our students for entry to prominent schools of medicine, dentistry, veterinary medicine, osteopathic medicine, optometry, podiatry, and chiropractic. Students interested in health-related professional careers should meet at their earliest convenience with the University Pre-Health Professions Advisor, who along with a university wide committee, will assist them with course selection and guide them through the application process for admission to the professional school of their choice. For more information regarding the UMass Lowell Pre-Health Professions program visit the Pre-Health Professionals Advising (https://www.uml.edu/Advising/Pre-Health-Advising/default.aspx) website.

**BACHELOR’S-TO-MASTER’S**

An accelerated five-year course of study leading to the BS and MS degrees in Biological Sciences is available to full-time students who have a grade-point average of 3.0 or above at the end of their junior year. Interested students, after evaluation and acceptance by the Department’s graduate selection committee, meet with the graduate coordinator to design a plan for completion of requirements for both degrees within a five-year time frame. Up to 6 credits of graduate courses (500 level or higher) may be used by a student in the BS/MS program for both graduate and undergraduate degrees. Graduate Record Exam scores are not required.

The objective of our graduate programs is to foster critical thinking and to develop skills needed for independent laboratory study. This is accomplished, in part, by offering advanced lecture, seminar and laboratory courses. While it is possible to complete MS requirements without independent research (thesis or project option) student research is what most distinguishes graduate from undergraduate study. All full-time M.S. degree students are, therefore, strongly urged to elect thesis or project options. The Department of Biological Sciences also collaborates with the Department of Chemistry in offering the Ph.D. Option in Biochemistry. Laboratory thesis research is a required component of this program. For more information, see graduate catalog (https://www.uml.edu/resources/catalog-archive/current/Graduate.pdf).

For additional information about programs contact the Department of Biological Sciences (https://www.uml.edu/Sciences/biology/Contact-Us.aspx).

**Ecology, Evolution and Organismal Biology Option**

The Ecology, Evolution and Organismal Biology option offers students a strong foundation in the basic sciences of biology, chemistry, and physics, as well as advanced courses in ecology, evolutionary biology and environmental biology. Principles of Ecology, Evolutionary Biology, and Climate Change: Science, Communication and Solutions are added to the core requirements in Biological Sciences. Students may choose from advanced courses in biology, including Botany, Invertebrate
Zoology, and Genomics.

Electives are also available in several interdisciplinary fields, including, analytical chemistry, environmental economics, environmental law, hydrogeology, and environmental geochemistry.

This option provides students with the theoretical background and hands-on training needed for careers or graduate study in diverse fields such as environmental biotechnology, conservation biology, public health, toxicology, bioremediation, and biological assessment of environmental quality.

View the complete Degree Pathway [here](https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf).

Total Minimum Credits = 120

The Arts and Humanities (AH) and Social Sciences (SS) perspectives are subsets of the Breadth of Knowledge requirements in the Core Curriculum. No more than two Breadth of Knowledge courses can be taken with the same four-letter prefix.

The Core Curriculum also includes seven Essential Learning Outcomes (ELOs). The Diversity and Cultural Awareness (DCA) ELO is met outside the major requirements. See the DCA course listing (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for a full list of classes that fulfill these requirements.

PHIL.4010 (https://www.uml.edu/catalog/courses/PHIL/4010) Bioethics and Genetics Research is required. It is an AH course and satisfies the SRE requirements.

The Class Search tool (https://www.uml.edu/student-dashboard/#class-search(filters) can be used to identify AH and SS courses that simultaneously satisfy the DCA or SRE requirement.

The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum (https://www.uml.edu/resources/catalog-
You should meet with your college-based professional advisor and/or faculty advisor to determine how best to satisfy the Core Curriculum requirements.

PHIL.4010 Bioethics and Genetics Research is required, and it is an AH course and satisfies the SRE requirement.

Students are required to take one course from the Organisms, Evolution, and Environment (OEE) category and one from the Cell and Tissue (CT) category to ensure they have adequate Breadth of Knowledge at the sophomore level. Students should consult with their advisor regarding course selection to satisfy the OEE and CT elective requirements.

Introduction to Bioinformatics is recommended as the OEE elective as it is a pre-requisite for upper-level Bioinformatics electives.

- Organisms, Evolution, and Environment Electives
  - BIOL.2400 Evolution, Ecology, and Conservation
  - BIOL.2055 Introduction to Bioinformatics

- Cell and Tissue Electives
  - BIOL.2200 Principles of Cellular Biology
  - BIOL.2520 Physiology

Students must complete six (6) upper-level electives three (3) of which must be lab courses. These courses are selected from two different categories:

- Bioinformatics Electives: Four (4) of the six upper-level electives must be selected from an approved list of bioinformatics courses. Two (2) of these bioinformatics electives must be lab courses.
  - BIOL.4050L Bioinformatics
  - BIOL.4062 Bioinformatic Tools in Sequence Analysis / Bioinformatic Tools in Sequence Analysis Lab
  - BIOL.4072 Bioinformatics

Free Electives can be satisfied by any UML course xxxx.1010 or above, with the following exceptions:

- Courses with the MATH prefix must be above the level of Calculus I.
- Courses with the LIFE prefix may NOT be used.
- Additional Biology courses can be used, but NO MORE than 60 credits of BIOL coursework may be applied towards the minimum 120 credits requirement to graduate.

NOTE: Labs can be taken as a 3 credit lecture with a 1 credit lab or both combined into a 4 credit class. In addition, some lab courses have a 3 credit lecture with 2 credit lab for a total of 5 credits. Additionally, two labs can be replaced by taking the 4 credit senior research courses:
  - BIOL.4110L
  - BIOL.4120L

Free Elective can vary from 0-3 credits depending on the number of 1 credit or 2 credit labs completed. For example:

- If a student completes no more than three 1 credit labs (whether the lab is a separate course or combined with the lecture into a 4 credit class), then Free Elective will be a 3 credit class.
• However, if three 2 credit labs are completed, then the student will have earned 3 additional credits which can be used to satisfy Free Elective.
• Other combinations can result in Free Elective being 1 or 2 credits.

Courses may be taken in either semester of the year listed.

Current UMass Lowell students should use their Advisement Report insSIS (https://www.uml.edu/Enrollment/SiS/default.aspx). If you need assistance, please contact your advisor.

**Restriction on off-campus study:**

Be advised that any course taken at another institution must be formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the catalog policy (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

## Total Minimum Credits = 120

The Arts and Humanities (AH) and Social Sciences (SS) perspectives are subsets of the Breadth of Knowledge requirements in the Core Curriculum. No more than two Breadth of Knowledge courses can be taken with the same...
The Core Curriculum also includes seven Essential Learning Outcomes (ELOs). The Diversity and Cultural Awareness (DCA) and Social Responsibility and Ethics (SRE) are met outside the major requirements. See the DCA course listing (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) and the SRE course listing (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for a full list of classes that fulfill these requirements.

The Class Search tool (https://www.uml.edu/student-dashboard/#class-search/filters) can be used to identify AH and SS courses that simultaneously satisfy the DCA or SRE requirement.

The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) policy for further details. You should meet with your college-based professional advisor and/or faculty advisor to determine how best to satisfy the Core Curriculum requirements.

Students are required to take one course from the Organisms, Evolution, and Environment (OEE) category and one from the Cell and Tissue (CT) category to ensure they have adequate Breadth of Knowledge at the sophomore level. Students should consult with their advisor regarding course selection to satisfy the OEE and CT elective requirements.

- Organisms, Evolution, and Environment Electives
  BIOL.2400
  (https://www.uml.edu/catalog/courses/BIOL/2400)

- Evolution, Ecology, and Conservation
  BIOL.2055
  (https://www.uml.edu/catalog/courses/BIOL/2055)

- Introduction to Bioinformatics

- Cell and Tissue Electives
  BIOL.2200
  (https://www.uml.edu/catalog/courses/BIOL/2200)

- Principles of Cellular Biology
  BIOL.2520
  (https://www.uml.edu/catalog/courses/BIOL/2520)

- Physiology

Free Electives can be satisfied by any UML course xxx.1010 or above, with the following exceptions:

- Courses with the MATH prefix must be above the level of Calculus I.
- Courses with the LIFE prefix may NOT be used.
- Additional Biology courses can be used, but NO MORE than 60 credits of BIOL coursework may be applied towards the minimum 120 credits requirement to graduate.

Students in the General Option must complete six (6) upper-level biology electives of which three (3) must have labs. Labs can be taken as a 3 credit lecture with a 1 credit lab or both combined into a 4 credit class. In addition, some lab courses have a 3 credit lecture with 2 credit lab for a total of 5 credits. Additionally, two (2) of the three (3) electives with labs may be replaced by taking the 4 credit senior research courses
  BIOL.4110L
  (https://www.uml.edu/catalog/courses/BIOL/4110L)
  and
  BIOL.4120L
  (https://www.uml.edu/catalog/courses/BIOL/4120L)

Free Elective can vary from 0-3 credits depending on the number of 1 credit or 2 credit labs completed. For example:

- If a student completes no more than three 1 credit labs (whether the lab is a separate course or combined with the lecture into a 4 credit class), then Free Elective will be a 3 credit class.
- However, if a student completes no more than 3 labs and each lab is a separate 2-credit lab, then the student will have earned three additional BIOL credits which can be used to satisfy Free Elective.
- Other combinations can result in Free Elective being 1 or 2 credits.

Courses may be taken in either semester of the year listed.

Current UMass Lowell students should use their Advisement Report in SIS (https://www.uml.edu/Enrollment/SiS/default.aspx). If you need assistance, please contact your advisor.

Restriction on off-campus study:

Be advised that any course taken at another institution must be formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the catalog policy (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

### Total Minimum Credits = 120

The Arts and Humanities (AH) and Social Sciences (SS) perspectives are subsets of the Breadth of Knowledge requirements in the Core Curriculum. No more than two Breadth of Knowledge courses can be taken with the same four-letter prefix.

The Core Curriculum also includes seven Essential Learning Outcomes (ELOs). The Diversity and Cultural Awareness (DCA) and Social Responsibility and Ethics (SRE) are met outside the major requirements. See the DCA course listing [here](https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) and the SRE course listing [here](https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for a full list of classes that fulfill these requirements.

The Class Search tool [here](https://www.uml.edu/student-dashboard/#class-search/filters) can be used to identify AH and SS courses that simultaneously satisfy the DCA or SRE requirement.

The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum [policy](https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for further details. You should meet with your college-based professional advisor and/or faculty advisor to determine how best to satisfy the Core Curriculum requirements.

2 Students are required to take one course from the Organisms, Evolution, and Environment (OEE) category and one from the Cell and Tissue (CT) category to ensure they have adequate Breadth of Knowledge at the sophomore level. Students should consult with their advisor regarding course selection to satisfy the OEE and CT elective requirements. BIOL.4200 (see [catalog link](https://www.uml.edu/catalog/courses/BIOL/4200)) Evolution, Ecology, and Conservation is recommended as the OEE elective for the Ecology, Evolution and Organismal Biology option as it is a pre-requisite for upper-level Ecology, Evolution and Organismal Biology option electives.

- Organisms, Evolution, and Environment Electives
  BIOL.2400
  (see [catalog link](https://www.uml.edu/catalog/courses/BIOL/2400)) Evolution, Ecology, and Conservation
  BIOL.2055

---

Undergraduate / College of Sciences

Academic Catalog 2021 - 2022 / Biological Sciences - General Information
Introduction to Bioinformatics

- Cell and Tissue Electives BIOL.2200
- Principles of Cellular Biology BIOL.2520
- Physiology

3 Free Electives can be satisfied by any UML course xxxx.1010 or above, with the following exceptions:

- Courses with the MATH prefix must be above the level of Calculus I.
- Courses with the LIFE prefix may NOT be used.
- Additional Biology courses can be used, but NO MORE than 60 credits of BIOL coursework may be applied towards the minimum 120 credits requirement to graduate.

4 Students must complete four (4) upper-level electives, two (2) of which must be lab courses. These courses are selected from two different categories:

- Ecology Electives: Three (3) of the four upper-level electives must be selected from an approved list of ecology courses. One (1) of these ecology electives must be a lab course. BIOL.3500
- Parasitic Protozoology BIOL.4050L
- Biomatics BIOL.4360
- Behavioral Ecology BIOL.4480
- Form Feeds Function in Vertebrate Evolution BIOL.4570
- Molecular Biology BIOL.4690L
- Molecular Techniques BIOL.4840
- Comparative Vertebrate BIOL.3060
- Genomics / Genomics Lab BIOL.4480
- Metazoan Parasitology / Metazoan Parasitology Lab BIOL.4570
- Data Science for Biologists / Data Science for Biologists Lab BIOL.4550
- Entomology / Entomology Lab BIOL.4800
- Developmental Biology / Developmental Biology Lab BIOL.5860
- Data Design and Analysis in Life Science ENVI.3010
- GIS in Earth and Environmental Science ENVI.4100
ENVI.4120L (https://www.uml.edu/catalog/courses/ENVI/4120L) Soil Science / Soil Science Lab
ENVI.4150 (https://www.uml.edu/catalog/courses/ENVI/4150) Biogeochemical Cycles
ENVI.5020 (https://www.uml.edu/catalog/courses/ENVI/5020) Freshwater Ecology
ENVS.5810(https://www.uml.edu/catalog/courses/ENVS/5810) Understanding Massachusetts Contingency Plan
GEOL.3140 (https://www.uml.edu/catalog/courses/GEOL/3140) Hydrogeology
GEOL.3150 (https://www.uml.edu/catalog/courses/GEOL/3150) Environmental Geochemistry
GEOL.3310 (https://www.uml.edu/catalog/courses/GEOL/3310) Earth History
GEOL.5010 (https://www.uml.edu/catalog/courses/GEOL/5010) Paleoclimatology
GEOL.5240 (https://www.uml.edu/catalog/courses/GEOL/5240) Regional Hydrogeology
GEOL.5250 (https://www.uml.edu/catalog/courses/GEOL/5250) Groundwater Modeling

- Biodiversity Elective: The remaining one (1) upper-level elective must be selected from an approved list of upper-level list of biodiversity courses. BIOL.3060 (https://www.uml.edu/catalog/courses/BIOL/3060) / BIOL.3080L (https://www.uml.edu/catalog/courses/BIOL/3080L) Invertebrate Zoology / Invertebrate Zoology Lab
BIOL.4480 (https://www.uml.edu/catalog/courses/BIOL/4480) Form Feeds Function in Vertebrate Evolution
BIOL.4570 (https://www.uml.edu/catalog/courses/BIOL/4570) / BIOL.4590L (https://www.uml.edu/catalog/courses/BIOL/4590L) Metazoan Parasitology / Metazoan Parasitology Lab
BIOL.4550 (https://www.uml.edu/catalog/courses/BIOL/4550) / BIOL.4550L (https://www.uml.edu/catalog/courses/BIOL/4550L) Entomology / Entomology Lab

Note: Some labs can be taken as a 3 credit lecture with a 1 credit lab or both combined into a 4 credit class. In addition, some lab courses have a 3 credit lecture with 2 credit lab for a total of 5 credits.

5Free Elective can vary from 1-3 credits depending on the number of 1 credit or 2 credit labs completed. For example:

- If a student completes no more than two elective 1 credits labs (whether the lab is a separate course or combined with the lecture into a 4 credit class), then Free Elective will be a 3 credit class.

- However, if a student completes no more than two elective labs and each has a separate 2 credit lab, then the student will have earned two additional credits which can be counted towards Free Elective thus reducing it to one credit.

6Courses may be taken in either semester of the year listed.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum policy for further details. You should meet with your faculty advisor to determine how you will meet the Core Curriculum requirements.

Current UMass Lowell students should use their Advisement Report in SIS (https://www.uml.edu/Enrollment/Sis/default.aspx). If you need assistance, please contact your advisor.

Restriction on off-campus study:
Be advised that any course taken at another institution must be formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the catalog policy (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

Total Minimum Credits = 120

The Arts and Humanities (AH) and Social Sciences (SS) perspectives are subsets of the Breadth of Knowledge requirements in the Core Curriculum. No more than two Breadth of Knowledge courses can be taken with the same four-letter prefix.

The Core Curriculum also includes seven Essential Learning Outcomes (ELOs). The Diversity and Cultural Awareness (DCA) and Social Responsibility and Ethics (SRE) are met outside the major requirements. See the DCA course listing (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) and the SRE course listing (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for a full list of classes that fulfill these requirements.

The Class Search tool (https://www.uml.edu/student-dashboard/#class-search/filters) can be used to identify AH and SS courses that simultaneously satisfy the DCA or SRE requirement.

The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum (https://www.uml.edu/resources/catalog-
You should meet with your college-based professional advisor and/or faculty advisor to determine how best to satisfy the Core Curriculum requirements.

Students are required to take one course from the Organisms, Evolution, and Environment (OEE) category and one from the Cell and Tissue (CT) category to ensure they have adequate Breadth of Knowledge at the sophomore level. Students should consult with their advisor regarding course selection to satisfy the OEE and CT elective requirements.

- Organisms, Evolution, and Environment Electives
  BIOL.2055 (https://www.uml.edu/catalog/courses/BIOL/2055) Introduction to Bioinformatics
- Cell and Tissue Electives
  BIOL.2200 (https://www.uml.edu/catalog/courses/BIOL/2200) Principles of Cellular Biology
  BIOL.2520 (https://www.uml.edu/catalog/courses/BIOL/2520) Physiology

Free Electives can be satisfied by any UML course xxxx.1010 or above, with the following exceptions:

- Courses with the MATH prefix must be above the level of Calculus I.
- Courses with the LIFE prefix may NOT be used.
- Additional Biology courses can be used, but NO MORE than 60 credits of BIOL coursework may be applied towards the minimum 120 credits requirement to graduate.

Students must complete five (5) upper-level electives two (2) of which must be lab courses. These courses are selected from two different categories:

- Biotechnology Electives: Four (4) of the five upper-level electives must be selected from an approved list of biotechnology courses. Two (2) of these biotechnology electives must be lab courses. BIOL.3010 (https://www.uml.edu/catalog/courses/BIOL/3010) / BIOL.3030L (https://www.uml.edu/catalog/courses/BIOL/3030L) Microbiology / Microbiology Laboratory
  BIOL.4050L (https://www.uml.edu/catalog/courses/BIOL/4050L) Bioinformatics

  BIOL.4900 (https://www.uml.edu/catalog/courses/BIOL/4900) Recombinant Protein Production Techniques
  BIOL.4420 (https://www.uml.edu/catalog/courses/BIOL/4420) Advanced Cell Biology
  BIOL.4490L (https://www.uml.edu/catalog/courses/BIOL/4490L) Form Feeds Function in Vertebrate Evolution
  BIOL.4600 (https://www.uml.edu/catalog/courses/BIOL/4600) Stem Cell Biology
  BIOL.4620 (https://www.uml.edu/catalog/courses/BIOL/4620) / BIOL.4630L (https://www.uml.edu/catalog/courses/BIOL/4630L) Cardiovascular Physiology / Cardiovascular Physiology Lab
  BIOL.4670 (https://www.uml.edu/catalog/courses/BIOL/4670) Molecular Biology
  BIOL.4690L (https://www.uml.edu/catalog/courses/BIOL/4690L) Molecular Techniques
  BIOL.4720 (https://www.uml.edu/catalog/courses/BIOL/4720) Virology
  BIOL.4760 (https://www.uml.edu/catalog/courses/BIOL/4760) Cell Culture
  BIOL.4800 (https://www.uml.edu/catalog/courses/BIOL/4800) / BIOL.4810L (https://www.uml.edu/catalog/courses/BIOL/4810L)
Note: Labs can be taken as a 3 credit lecture with a 1 credit lab or both combined into a 4 credit class. In addition, some lab courses have a 3 credit lecture with 2 credit lab for a total of 5 credits. Additionally, two labs can be replaced by taking the 4 credit senior research courses BIOL.4110L (https://www.uml.edu/catalog/courses/Biol/4110L) and BIOL.4120L (https://www.uml.edu/catalog/courses/Biol/4120L).

5Free Elective can vary from 0-2 credits depending on the number of 1 credit or 2 credit labs completed. For example:

- If a student completes no more than two 1 credit lab (whether the lab is a separate course or combined with the lecture into a 4 credit class), then Free Elective will be a 2 credit class. Since there are not many 2 credit classes, this could require completion of a full 3 credit class.
- However, if a student completes no more than 2 labs and each lab is a separate 2 credit lab, then the student will have earned two additional BIOL credits which can be used to satisfy Free Elective.

6Courses may be taken in either semester of the year listed. Current UMass Lowell students should use their Advisement Report inSIS (https://www.uml.edu/Enrollment/Sis/default.aspx). If you need assistance, please contact your advisor.

Restriction on off-campus study:

Be advised that any course taken at another institution must be formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the catalog policy (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

**2 Physics sequence (PHYS.1410 and PHYS.1440L)** is an equivalent for the General Physics sequence.

**3 Students with Psychology minor can substitute PSYCH.3600 (Adult Development and Aging for HSCI.3060) is an equivalent for the General Physics sequence.**

**4 EXER.4210** Directed Study in Health Promotion can be taken as a Free Elective.

**5 EXER.4200** Clinical Exercise Physiology is offered in Senior Year, Fall Semester for December graduates.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum policy for further details. You should meet with your faculty advisor to determine how you will meet the Core Curriculum requirements.

Current UMass Lowell students should use their Advisement Report in SIS. If you need assistance, please contact your advisor.

**Restriction on off-campus study:**

Be advised that any course taken at another institution must be formally approved prior to enrollment. See the catalog policy for details.

Last updated: 12/13/2021
BIOL.1110 Principles of Biology I (Formerly 81.111) - Credits: 3
Introduces topics such as the chemical and physical basis of life, its evolution, diversity, distribution, and interrelationships of life forms. The central theme of genetic replication, translation, expression, and selection will be emphasized as a unifying principle which determines and integrates structure and function at the cellular, individual population, and community levels of organization. Designed for those students who intend to pursue career options in the biological sciences, biotechnology or related areas such as medicine, biomedical research, radiological sciences or environmental sciences. It is the first-semester course of a two-semester sequence.

BIOL.1120 Principles of Biology II (Formerly 81.112) - Credits: 3
Serves as a continuation of the 81.111/81.112 sequence for those students who intend to pursue career options in the biological sciences or related professional areas such as medicine, biomedical research or environmental sciences. Molecular energy exchange in organisms (photosynthesis and respiratory metabolism), the common functional needs of support, locomotion, nutrition, internal communication and the maintenance of homeostasis are considered. Control and regulation of organisms at levels beyond the individual are considered through discussions of population and community ecology.

BIOL.1130 Introduction Experimental Biology I (Formerly 81.113) - Credits: 1
Presents a series of field trips and laboratory exercises designed to introduce the student to concepts of the distribution and maintenance of life. Specific consideration is given to the diversity and organization of local ecosystems; the continuation of life is considered through exercises covering mitosis, meiosis, genetics, and evolutionary biology.

BIOL.1140 Introduction to Experimental Biology II (Formerly 81.114) - Credits: 1
Provides laboratory experiments, analyses, and dissections designed to introduce the student to biological techniques and processes at the sub-cellular, cellular, and organ systems levels.

BIOL.1160 Freshman Seminar in Biology (Formerly 81.116) - Credits: 1
This course is designed to acclimate incoming students to their new University environment. Students will learn about the Biology program, its faculty and staff members, University resources, and other information useful for success.

BIOL.1170L Principles of Biology I Laboratory (Formerly 81.117) - Credits: 1
A laboratory course covering introduction to scientific inquiry in the biological sciences for majors in biology and related fields. Techniques that are important in biology (ex: microscopy, spectrophotometry and pipetting) are taught and these techniques are applied to the investigation of biological principles emphasizing basic cell and molecular biology, metabolism and fundamental processes of life.

BIOL.1180L Principles of Biology II Laboratory (Formerly 81.118) - Credits: 1
A laboratory course covering introduction to scientific inquiry in the biological sciences for majors in biology and related fields. Techniques that are important in biology (ex: microscopy, dissection) are taught and these techniques are applied to the investigation of basic biological principles emphasizing plant and animal diversity and organ systems.

BIOL.1220 Biology for Scientists (Formerly 81.122) - Credits: 3
Develops a basic understanding of biological topics relevant to students in the health sciences. Course will introduce students to biochemistry, cell biology, cellular respiration, cell replication, genetics, inheritance and molecular biology. Introduction to prions, viruses, prokaryotic and eukaryotic biology will also be covered.

BIOL.1240L Biology for Scientists Lab (Formerly 81.124) - Credits: 1
Develops a basic understanding of biological topics relevant to students in the health sciences. Course will introduce students to biochemistry, cell biology, cellular respiration, cell replication, genetics, inheritance and molecular biology. Introduction to prions, viruses, prokaryotic and eukaryotic biology will also be covered.

BIOL.1CO-OP Curricula Practical Training - Credits: 0-1
Curricula Practical Training. "Variable credit course, student chooses appropriate amount of credits when registering."

BIOL.2010 General Microbiology (Formerly 81.201) - Credits: 3
A study of the general properties of bacteria and viruses (anatomy, physiology, genetics, metabolism, cultivation, and growth); discussions include major microbial infections in man
(etiologic agent, antibiotics and chemotherapy) and an examination of the role of the microbes in the environment.

**BIOL.2030L General Microbiology Laboratory**  
(Formerly 81.203) - Credits: 2  
A series of laboratory exercises covering basic qualitative and quantitative techniques commonly employed in a microbiology laboratory.

**BIOL.2055 Introduction to Bioinformatics (Formally BIOL.3050)** - Credits: 3  
An introduction to the field of bioinformatics with some hands-on exploration of applications. Specific areas include scientific archives and information retrieval, genome organization and evolution, phylogenetic analysis, comparative genomics, transcriptomics, proteomics, structural bioinformatics, and systems biology. In addition to covering the biological principles underpinning the bioinformatic approaches to study the biology and evolution of genomes and systems, this course also imparts basic computational skills in data retrieval from databases in molecular, functional, and structural biology.

**BIOL.2100 Biology for Engineers**  
(Formerly 81.210) - Credits: 3  
Develops a basic understanding of the science of biology for engineering students, including introduction to biochemistry, cell biology, metabolism, genetics, genomics, molecular biology, cell growth, and nutrition. Both eukaryotic and prokaryotic biology will be covered.

**BIOL.2120L Biology for Engineers Laboratory**  
(Formerly 81.212) - Credits: 1  
This laboratory course will build on BIOL.2100. It will provide an introduction to several basic biological techniques and approaches used in biological engineering laboratories.

**BIOL.2200 Principles of Cellular Biology**  
(Formerly 81.220) - Credits: 3  
This course will cover basic topics in cell and molecular biology, including structures of proteins, lipids, carbohydrates and nucleic acids, structure of DNA and its replication and repair, transcription, and cell-cell communication. The molecular biology of cells and the regulation of cellular processes will be emphasized.

**BIOL.2330L Experimental Methods in Biology**  
(Formerly 81.233) - Credits: 2  
This is a project-based course designed to introduce students to the methods of general biological laboratory research. Techniques will be introduced in the context of interrelated experiments during a semester-long project. Techniques will include, but are not limited to: making solutions, pipetting, using sterile technique, gel electrophoresis, DNA transformations, minipreps, and other molecular and microscopic methods.

**BIOL.2350 Genetics**  
(Formerly 81.235) - Credits: 4  
The theories of both classical and molecular genetics are explored with emphasis on the experimental evidence which has laid the foundation for contemporary understanding of genetics, included is the nature of the genetic material, gene action, genetic recombination, gene regulation, gene interaction, the production and inheritance of genetic phenotypes, chromosomal mechanics, and the behavior of genes in populations.

**BIOL.2400 Evolution, Ecology and Conservation**  
(Formerly 81.240) - Credits: 3  
Over 5 million species thrive in amazingly diverse habitats on Earth ranging from the extreme freezing cold of the poles to the lush warmth of the tropics. How did this fantastic diversity arise on our earth? How are these species intimately interconnected with one another, their communities and their ecosystem? How can we save this remarkable biodiversity from extinction? This course will address these key questions by examining the fundamental concepts of evolution, ecology and conservation biology. Students will be expected to attend a discussion section in which they will examine case studies and primary scientific literature.

**BIOL.2520 Physiology**  
(Formerly 81.252) - Credits: 3  
Presents a comprehensive study of the fundamental mechanisms governing mammalian physiology. The role of cell physiology in determining systemic functions and coordinating biological control systems will be emphasized. Maintenance of homeostasis will be discussed in terms of biochemical, cytological, anatomical, and physical principles.

**BIOL.3000L Directed Research Experience II**  
(Formerly 81.300) - Credits: 2  
**BIOL.3010 Microbiology**  
(Formerly 81.301) - Credits: 3  
General properties of bacteria and viruses including anatomy, physiology, genetics, metabolism, cultivation, growth, control and their role in the ecosystems, and industry.

**BIOL.3030L Microbiology Laboratory**  
(Formerly 81.303) - Credits: 2
A series of laboratory exercises covering basic qualitative and quantitative techniques commonly employed in a microbiology laboratory including sterile technique, microscopy, enrichment and isolation, and prevention.

**BIOL.3050 Introduction to Bioinformatics - Credits: 3**

An introduction to the field of bioinformatics with some hands-on exploration of applications. Specific areas include scientific archives and information retrieval, genome organization, comparative genomics, transcriptomics, proteomics, structural bioinformatics, and systems biology. This course also imparts basic computational skills in data retrieval from the databases in molecular and structural biology.

**BIOL.3060 Invertebrate Zoology (Formerly 81.306) - Credits: 3**

A survey of the phyla of invertebrate animals. Discussions include their physiology, development, morphology, behavior, ecology and adaptations. Corequisite: 81.308

**BIOL.3080L Invertebrate Zoology Lab (Formerly 81.308) - Credits: 1**

A broad spectrum of living and preserved specimens are studied in the laboratory with regard to both structure and function. Corequisite 81.306

**BIOL.3150 Principles of Ecology (Formerly 81.315) - Credits: 3**

A series of lectures concerned with the interrelationships of organisms with their abiotic environment with emphasis on the New England area. Selected current topics will supplement the text.

**BIOL.3170L Principles of Ecology Laboratory (Formerly 81.317) - Credits: 2**

A series of laboratory exercises to supplement and illustrate lectures of 81.315. Field trips are an integral part of the course involving sampling and analysis of such ecosystem components as water, soil, invertebrate fauna and characteristic flora of various habitats. Directed readings, quizzes, practical exam and oral presentation of a research topic are integral parts of the course.

**BIOL.3200 Botany (Formerly 81.320) - Credits: 3**

Serves as an introduction to the study of the plant kingdom dealing with the structure, function, and diversity of plants with an emphasis on seed plants. The physiology, morphology, and taxonomy of plants is emphasized.

**BIOL.3220L Botany Laboratory (Formerly 81.322) - Credits: 1**

Emphasizes material covered in 81.320 using field and laboratory exercises.

**BIOL.3240 Economic Botany (Formerly 81.324) - Credits: 3**

Discussions on how humans use plants. Topics will include: Structure and characteristics of woods and their uses in construction of various items, agricultural uses of food plants and spices, poisonous plants, medicinal plants, plants used in religious ritual and plants used as hallucinogens, plants that have altered human history.

**BIOL.3420 Comp Vertebrate Anatomy (Formerly 81.342) - Credits: 3**

This course is designed to provide students a broad understanding of the anatomy of vertebrates with an emphasis on comparison between taxa and their evolutionary significance. Students will acquire knowledge and understanding of anatomical structure and terminology of vertebrates and an understanding of how these structures have evolved from ancestral forms. There will also be some reference to the fields of embryology, histology and paleontology in the course. This course may interest students who might want to go into various animal/human focused fields (e.g. veterinary science, medicine or graduate studies with more organismal focus), and students who simply want a course focused on vertebrates. However, students should note that this course does not focus on human nor veterinary anatomy. This course could also help undergraduates in the General Biology and Ecology Option satisfy free elective requirements.

**BIOL.3440L Comp Vertebrate Anatomy Laboratory (Formerly 81.344) - Credits: 2**

**BIOL.3500 Parasitic Protozoology - Credits: 3**

An introduction to the diversity of single-celled eukaryotes, i.e., protozoans, that are parasites of humans, domestic, and wild animals. Lectures emphasize the morphology, physiology, and life cycles of species of Plasmodium (Malaria), trypanosoma (Sleeping sickness, Chagas disease), Leishmania (Leishmaniasis), and Toxoplasma (Toxoplasmosis), and include their arthropod vectors when present (mosquitos, sand flys, kissing bugs). We will cover the basics of disease (symptoms and pathologies), treatments, and control measures. Contemporary research efforts will be emphasized.

**BIOL.3550 Plant-Animal Interactions - Credits: 3**
Many of our childhood biology lessons entail examples of plant-animal interactions, with macro-level examples that included bees pollinating flowers, squirrels burying acorns in the Fall and caterpillars eating holes in leaves. Yet there are many less obvious ways that plants and animals interact in our biosphere; this course will attempt to provide an overview of major themes in this field. We will delve into the evolutionary origins of how these relationships began and examine how these ecological interactions seem to sustain all biodiversity of Earth. By end of the course, students will be well versed in the technical jargon used in the field and will appreciate the importance of inter-species interactions between the animal and plant kingdom for evolutionary innovation and diversity.

BIOL.3620 Development and Evolution - Credits: 3

This course will introduce the concepts and methods of the field of evolutionary developmental biology. We will cover gene regulation and evolution. Through primary literature, discussion and presentation, we will explore how genetic changes to developmental processes contribute to evolutionary change.

BIOL.4010L Supervised Teaching Biology I (Formerly 81.401) - Credits: 1

Through observation, preparation of material and presentation of demonstrations in selected courses offered by the Department of Biological Sciences, the student becomes familiar with the materials and teaching/learning situations in biology.

BIOL.4020L Supervised Teaching Biology II (Formerly 81.402) - Credits: 1

Through observation, preparation of material and presentation of demonstrations in selected courses offered by the Department of Biological Sciences, the student becomes familiar with the materials and teaching/learning situations in biology.

BIOL.4050L Bioinformatics - Credits: 4

There is a growing need for bioinformaticians in research and industry as datasets are getting bigger and complex, making computational methods necessary for analysis. This hands-on course introduces principles, databases, software, and programming for the analysis and interpretation of molecular datasets. Emphasis is on practical assignments using computational approaches from a biologist’s perspective. Topics include genome assembly, transcriptomic analysis, and data retrieval from databases using both graphical user interfaces and basic computer programming using Bash and R. A term project and computer-based exercises are designed to showcase the capabilities and limitations of bioinformatics tools used in genome research, as well as to develop skills in coding literacy.

BIOL.4062 Bioinformatic Tools in Sequence Analysis - Credits: 3

This hands-on course introduces databases, approaches, and software for the analysis and interpretation of molecular sequences. Practical assignments and a term project emphasize the application of computational approaches from a biologist’s perspective. Topics include genome assembly, transcriptomic analysis, and data retrieval from databases using both graphical user interfaces and basic computer programming using Bash and R. The class assignments are all computer-based exercises that are designed to showcase the capabilities and limitations of bioinformatics research and tools used in sequence analysis, as well as to develop skills in coding literacy.

BIOL.4062L Bioinformatic Tools in Sequence Analysis Lab - Credits: 1

This lab accompanies the lecture, with hands-on practical assignments to achieve a firmer understanding of bioinformatics tools and principles. Assignments and a term project emphasize the application of computational approaches from a biologist’s perspective. Topics include genome assembly, transcriptomic analysis, and data retrieval from databases using both graphical user interfaces and basic computer programming using Bash and R. The class assignments are all computer-based exercises that are designed to showcase the capabilities and limitations of bioinformatics research and tools used in sequence analysis, as well as to develop skills in coding literacy.

BIOL.4072 Data Science for Biologists - Credits: 3

Like many other areas of science and business, biology in increasingly defined by increasing amounts of available data. The ability to analyze, visualize, and make inferences from this data will become increasingly valuable for future biologists. Data science can be defined as the intersection between computer science, applied statistics, and knowledge of the application domain—in this case, biology. In this class we will apply methods such as generalized linear models, multi-level models, unsupervised learning, and basic neural networks to biological problems. Hands-on activities using programming will give students experience with steps of a data science project, including simulating, exploring, visualizing, drawing conclusions with statistics, and creating a reproducible analysis.

BIOL.4072L Data Science for Biologists Lab - Credits: 1

Each week we will focus on a different set of data science skills with a one-day project done in small teams. Hands-on activities
using data science programming languages will give students experience with steps of a data science project, including simulating, exploring, visualizing, drawing conclusions with statistics, and creating a reproducible analysis.

BIOL.4090 Photobiology (Formerly 81.409) - Credits: 3
Biological process involving light in plants and animals. Topics include mechanisms of light absorption, energy transduction, light reactions in photosynthesis, functions of color in flowering plants, visual systems and structural and pigment coloration in animals, pigmentation in animals affecting camouflage and reproductive strategies. In addition, the genetics involved in responses to light such as photoperiods, circadian rhythms, and seasonal cycles will be covered.

BIOL.4110L Senior Research Biology (Formerly 81.411) - Credits: 4
An individual, directed one-year research program for senior biology majors selected on the basis of previous academic performance at the end of the junior year. A topic will be chosen after consultation with a faculty member. A report of the research in the form of a thesis is required.

BIOL.4120L Senior Research: Biology (Formerly 81.412) - Credits: 4
An individual, directed one-year research program for senior biology majors selected on the basis of previous academic performance at the end of the junior year. A topic will be chosen after consultation with a faculty member. A report of the research in the form of a thesis is required.

BIOL.4190 Biochemistry (Formerly 81.419) - Credits: 3
Studies the structure and properties of proteins, carbohydrates, and lipids which combined with a discussion of elementary enzymology allows for detailed descriptions of several important degradative and biosynthetic pathways, their integration and regulation. Throughout the course, emphasis is on methods and practical application of fundamental information to the solution of problems of current biomedical interest.

BIOL.4200 Biochemistry II (Formerly 81.420) - Credits: 3
This course will focus on protein dynamics where students will gain facility with thermodynamics of protein folding/misfolding, catalysis, kinetics and binding equilibria as they apply to proteins and other molecules in biological systems. The central theme of this course is that living systems can be understood in terms of the fundamental principles defining the structure and energetics of biological molecules. Attention will be given to quantitative aspects of enzyme kinetics and molecular binding. Examples of how these principles apply to the understanding and treatment of human disease will be discussed.

BIOL.4210L Biochemistry Techniques (Formerly 81.421) - Credits: 2
A series of discussions and "hands on" laboratory exercises emphasizing techniques and use of equipment most commonly employed in biochemical-biomedical research laboratories. Techniques to be mastered include: cell culture, cell fractionation, enzyme purification, ultracentrifugation, UV-visible spectrophotometry, spectrofluorometry, various types of chromatography (thin layer, gas, gel exclusion, ion exchange), electrophoresis, liquid scintillation spectrometry, and the safe handling and application of radioisotopes to problems in biochemistry. Wherever possible, the principles presented in 81.419 will be used as a basis for experimentation using the above techniques. Meets Core Curriculum Essential Learning Outcome for Written & Oral Communication (WOC).

BIOL.4225 Advanced Topics in Biochemistry - Credits: 2
This seminar course will focus on the detailed discussion of the structure of proteins and other biological molecules and how the structure determines the function of those molecules.

BIOL.4230 Biology of Global Change (Formerly 81.423) - Credits: 3
An examination of the role of life processes in controlling the cycling of elements on the surface of the Earth and atmosphere from the molecular to the global level. Students will learn how the different physical components of Earth interact, how these interactions are influenced by life, and how they affect Earth's habitability now and in the future.

BIOL.4260 Evolutionary Biology (Formerly 81.426) - Credits: 3
Examines the patterns and processes of biological evolution that have led to the diversity of life. Topics covered include the history of evolutionary thought, the evidence for evolution, the generation and maintenance of population-level variation, natural selection, adaptation, sexual selection, speciation, phylogenetics, molecular evolution, the fossil record and extinctions. In addition to lecture and textbook material, students will read and discuss classic and contemporary primary literature from evolutionary biology.
BIOL.4280 Molecular Biotechnology: Recombinant Protein Production (Formerly 81.428) - Credits: 3

Proteins are major targets of pharmaceuticals, and are themselves increasingly used as therapeutics. However both basic research and the pharmaceutical industry depends on availability of purified proteins that are often difficult to isolate from native sources. In this lecture course, students will learn basic and advanced theoretical background in expression and purification of recombinant proteins. It will cover a variety of expression systems including prokaryotic and eukaryotic cells. The course will also address traditional and new methods in recombinant protein purification. Furthermore, students will be introduced to some downstream applications such as crystallization screens and biochemical/biophysical studies.

BIOL.4290 Recombinant Protein Production Techniques (Formerly 81.429 & 81.529) - Credits: 4

This course introduces students to the principles and practice of recombinant protein expression and purification’s. Proteins are major targets of pharmaceuticals, and are themselves increasingly used as therapeutics. However both basic research and pharmaceutical industry depends on availability of purified proteins that are often difficult to isolate from native sources. This course will provide both didactic and laboratory instruction. It is comprised of a series of lecture and laboratory exercises, with an emphasis on practical techniques and hands-on experience of recombinant protein purification. The course will cover a variety of expression systems, including prokaryotic and eukaryotic cells, and address traditional and new methods in protein purification.

BIOL.4300 Cancer Genomics - Credits: 3

Cancer is usually the result of genetic alterations acquired over a lifetime that enable a tumor to grow and spread. As a result, each tumor is unique and involves a complex combination of mutations—a part of the reason that cancers can be so hard to treat. To better understand the characteristics of these diseases and discover appropriate treatments, institutions have comprehensively profiled the genomic changes across thousands of people’s tumors. That data is available for anyone with the right skills to analyze. In this class, we will delve into the genomics of cancer, as a way to learn how cancers develop, how molecular profiling technologies generate data about these cancers, and how bioinformatics approaches can harness these data to gain insight and discover treatments.

BIOL.4320 Genomics (Formerly 81.432) - Credits: 3

This course surveys the field of genomics, examining current technologies and their biological applications. Lectures cover genome organization, genome sequencing and annotation, functional genomics, evolutionary genomics, transcriptomics, proteomics and the role of bioinformatics in organizing and interpreting genomic data.

BIOL.4340L Genomics Laboratory (Formerly 81.434) - Credits: 1

A series of molecular laboratory and computer-based bioinformatics exercises providing practical experience in the collection and analysis of genomic-level data.

BIOL.4360 Behavioral Ecology - Credits: 3

Animals learn songs, practice agriculture, and craft tools. They build elaborate structures without a blueprint and migrate across the globe without a map. This course explores the mechanistic and evolutionary causes of animal behavior. A combination of lectures, discussions, and animal demos will introduce students to major themes in the field, while emphasizing experiments and ecological context as fundamental to the study of behavior. Students will discuss historic debates and emerging research on the evolution of exaggerated sexual ornaments and defensive structures, sensory bias, heritability of behavior, reciprocity & kinship, and the emergence of animal societies. By the end of the course, students will be able to interpret the behaviors of animals in an evolutionary framework. Students from other departments, including Psychology, and Environmental Science can join this course with instructor permission.

BIOL.4370 Biology and Evolution of Arthropoda (Formerly 81.437) - Credits: 3

A detailed examination of phylum Arthropoda from developmental, ecological, genetic, morphological and paleontological perspectives. Specific topics include the relationships of arthropods to protoarthropod-like groups including tardigrades and onychophorans, the evolution of segmentation, and current perspectives on relationships within the phylum.

BIOL.4380 Advanced Genetic Analysis - Credits: 3

This course explores fundamental concepts in classical and molecular genetics. We will examine how studies in genetic model organisms (including budding yeast, Drosophila, and C. elegans) have yielded remarkable insight into a host of biological mechanisms, including cell-signaling pathways, animal development, and gene regulation. Special emphasis will be placed on how geneticists design and interpret their studies. The semester will cover strategies ranging from the classical (screens, selection, complementation, and conditional mutants) to the modern approaches enabled by the genomic revolution (genetic engineering, gene misexpression, and genome-wide association studies).
BIOL.4390L Biology and Evolution of Arthropoda Laboratory (Formerly 81.439) - Credits: 1
An exploration of protoarthropod and arthropod diversity using live and preserved specimens of the major taxa including Tardigrada, Onychophora, Chelicerata, Crustacea, Myriapoda and Hexapoda. Students will learn to collect, dissect, identify, handle and care for live specimens.

BIOL.4420 Advanced Cell Biology (Formerly 81.442) - Credits: 3
This is an advanced course in cell biology. In this course we will examine different areas of eukaryotic cell biology including: membrane structure and function, cell adhesion, intercellular communication, signal transduction, chemotaxis, receptor-mediated endocytosis and intracellular trafficking. Mechanisms underlying relevant human diseases will also be discussed. Upon completion of the course the student will have a strong understanding of cell biology, develop critical thinking processes, proficiency in scientific reading and how to communicate material succinctly.

BIOL.4480 Form Feeds Function in Vertebrate Evolution - Credits: 4
This course will provide you with a solid comparative knowledge of how vertebrates including humans have evolved, focusing on how anatomy (form) feeds function (physiology, biomechanics) in movement biology (Cardiorespiratory, sensing, locomotion, feeding). It is only by understanding our evolutionary history that you understand e.g. how vertebrates became Olympian movers, how humans became bipedal, why we use parts of the ancestral jaw to hear, and how we avoid choking when we swallow. Such knowledge is key for medical and veterinary school, but will also support you in biomedical and biotechnology fields as well as in various general science disciplines. This course emphasizes modes of thought, including the differences between evidence and inference, and between correlation and causality.

BIOL.4490L Biology of Muscle - Credits: 4
This course takes integrative approaches to exploring architecture, physiology and mechanics of vertebrate skeletal muscle as the main driver of movements in organisms including humans. Combining presentations and discussions of important publications with simple experiments and report-writing, the course hones a specialist-level understanding of how the organ structure is constructed, how cell-level phenomena govern contraction, how the nervous system controls muscle function, how muscle contractions are constrained by physics, and how muscle as an organ structure is able to mitigate those constraints. We will also build and use actuators inspired by muscle function.

BIOL.4510 Senior Seminar in Biology (Formerly 81.451) - Credits: 2
This course instructs students in developing effective writing and speaking skills required for preparation of scientific manuscripts and presentations, and communicating in the scientific world. Students will be required to prepare and present oral presentations and to submit written reports.

BIOL.4550 Entomology - Credits: 3
This course explores the diversity, evolution, and behaviors of insects. Insects are pollinators, undertakers, and parasites. They are master architects, and the inventors of flight and agriculture. Their societies can tower over elephants or fit in the palm of your hand. Plagues of locusts have shaped human history and wars have been won on the backs of fleas. This course emphasizes comparative natural history and experimentation as the foundation of innovations in entomology. Students will develop a solid understanding of the principles of insect biology that can be applied to medical, forensic, veterinary, agricultural, conservation and academic fields.

BIOL.4550L Entomology Lab - Credits: 1
This laboratory focuses on insect classification, development and behavior. Students will travel to local field sites to study and collect insects. Each student will curate a professional insect collection and develop a working knowledge of insect taxonomy through dissection and comparison of preserved specimens, including economically and medically important insects. Students will also rear a variety of social and solitary insects under experimental conditions and report their results. Labs on behavior will focus on insect communication, parental care, eusociality, and orientation.

BIOL.4570 Metazoan Parasitology (Formerly 81.457) - Credits: 3
An introduction to the diversity of metazoans (animals) that parasitize humans, livestock, other animals (both vertebrate and invertebrate), and plants. Lectures emphasize the morphology, form and function, physiology, systematics, evolution, life cycles and pathogenesis of several major parasitic groups. Formerly: Advanced Invertebrate Zoology.

BIOL.4590L Metazoan Parasitology Laboratory (Formerly 81.459) - Credits: 1
The purpose of the laboratory is to provide students an opportunity to identify and work with a variety of parasites that we discuss in lecture. We will work with preserved specimens, slide material, necropsies, and live specimens. Students will learn how to identify parasites and understand
how they affect host biology.

BIOL.4600 Stem Cell Biology (Formerly 81.460) - Credits: 3

The molecular and genetic characteristics of stem cells and their developmental potential will be explored. Lectures and readings will cover the development of embryonic, fetal and adult stem cells, and will examine their use in treating human disorders receiving widespread attention, including neurodegenerative diseases, heart disease, spinal cord injury and leukemia. The ethical, legal and social implications of stem cell research will also be discussed. Additional library investigation and a term paper or seminar will be required.

BIOL.4620 Cardiovascular Physiology (Formerly 81.462) - Credits: 3

This course will focus on human cardiovascular physiology in normal and diseased states. The objective of Cardiovascular Physiology is to reinforce the concept that the cardiovascular system can be understood in terms fundamental biophysical and cellular physiological principles. Quantitative aspects will be reinforced with problem sets in the accompanying lab course 81.463. Key concepts in the course will be placed in a medical context showing the underlying physiological concepts that lead to disease states such as; altered blood pressure, heart failure, valvular disease and arrhythmias.

BIOL.4630L Cardiovascular Physiology Lab (Formerly 81.463) - Credits: 1

Cardiovascular Physiology Lab is designed to supplement Cardiovascular Physiology 81.462. The objective of the course is to teach cardiovascular system function using problems sets as well as clinical and pathophysiological examples.

BIOL.4670 Molecular Biology (Formerly 81.467) - Credits: 3

A study of the principles and specialized techniques of cloning, purifying, and manipulating recombinant DNA molecules.

BIOL.4690L Molecular Techniques (Formerly 81.469) - Credits: 4

Laboratory experiments and independent projects designed to illustrate current techniques and instrumentation used in genetic engineering. Included are restriction mapping, cloning, plasmid purification, blot hybridization, PCR, and DNA sequencing. Students are introduced to computer software utilized for DNA sequence analysis and manipulation.

BIOL.4720 Virology (Formerly 81.472) - Credits: 3

A study of bacterial, animal, and plant viruses, including viral structure, modes of replication, biochemistry of the infected cell, genetic properties, and viral oncogenesis. Emphasis is on virus cell interaction at the molecular level.

BIOL.4760 Cell Culture (Formerly 81.476) - Credits: 4

A series of lecture and laboratory exercises that will focus on the in vitro culture and analysis of multiple cell type commonly used in biomedical research laboratories. The lecture component will review methodologies used to establish immortalized cell lines, medium component for specific cell types, and techniques for genetically manipulating and analyzing cell lines. The laboratory exercises will emphasize the mastery of sterile techniques used to grow both established cell line and primary cultures, and molecular tools used for introducing recombinant genes and for analyzing cell growth and differentiation.

BIOL.4800 Developmental Biology - Credits: 3

This course covers the current understanding of the genetic, molecular, and cellular mechanisms that regulate animal development. Variation in developmental processes, including those involved in evolutionary change as well as disease, are discussed. Specific topics include: fertilization, determination of cell fate and differentiation, establishment of body plans, cell migration, organogenesis, morphogenesis, stem cells, and regeneration.

BIOL.4810L Developmental Biology Lab - Credits: 1

This course provides hands on experience in current methods and model systems used to investigate questions in developmental biology. Students will be exposed to a wide variety of embryonic systems, including intensively studied genetic model systems (e.g. C. elegans, zebrafish, mouse) and others with well-established experimental attributes (e.g. Chick, sea urchin). Analytical and experimental techniques used to explore invertebrate and vertebrate development include embryological manipulation, molecular and cell biology approaches. Conceptual topics include cell specification and differentiation, pattern formation, morphogenesis, and comparative embryology. This lab supplements the Developmental Biology lecture (BIOL.4800).

BIOL.4820 Cancer Biology (Formerly 81.482) - Credits: 3

A study of the genes and proteins implicated in the cause of human cancer and discussion of the complex behaviors of cancer cells that differ from their normal counterparts in human tissue. Lectures and original research papers will be used.
BIOL.4840 Comparative Vertebrate Embryology - Credits: 3

A comparative study of vertebrate embryological development focusing on the morphological development (e.g., differentiation of tissues, organs, and systems) of vertebrates. Evolutionary relationships of the classes of vertebrates will be investigated through their anatomy. This course builds on concepts taught in Developmental Biology, providing more detailed analysis of tissue development in a comparative context.

BIOL.4880 Structural Biology (Formerly 81.488) - Credits: 3

Structural basis of the molecular biology of cells and the regulation of cellular processes will be discussed. This course will cover the fundamental knowledge about protein, nucleic acid and membrane structure in relation to central systems in biology. Topics to be discussed include structural enzymology, macromolecular assemblies for replication transcription, translation, membrane proteins, signal transduction, cell motility and transport, cell-cell interactions, the immune system, and virus structure.

BIOL.4890 Practical Protein Crystallography (Formerly 81.589 & 81.489) - Credits: 4

This course provides grounding in the principles and practice of protein x-ray crystallography. The course will be unique in format and provide both didactic and laboratory instruction. It is comprised of a series of lecture and laboratory exercises, with an emphasis on practical techniques and hands-on experience of modern protein crystallography. The course will cover the fundamental knowledge about x-ray physics, instrumentation and geometrical diffraction, protein crystallization, macromolecular data collection and processing, phase estimation and improvement, model building and refinement, and model assessment. Student will also be given a recently published structural paper for writing a report on the subject.

BIOL.4892 Crystallography and Structural Bioinformatics - Credits: 3

This course provides grounding in the principles and practice of protein x-ray crystallography, with some applications in structural bioinformatics and drug discovery. This course is comprised of a series of lecture with an emphasis on practical methodologies of modern protein crystallography and structural bioinformatics. The course will cover the fundamental knowledge about x-ray physics, instrumentation and geometrical diffraction, protein crystallization, macromolecular data collection and processing, phase estimation and improvement, model building and assessment, and some exploration of bioinformatics tools employed in molecular docking and virtual screening.

BIOL.4894L Crystallography and Structural Bioinformatics Lab - Credits: 1

This lab course provides grounding in the principles and practice of protein x-ray crystallography, with some applications in structural bioinformatics and drug discovery. It covers topics correlated with the co-requisite lecture course BIOL.4892.

BIOL.4910L Senior Project: Biology (Formerly 81.491) - Credits: 4

Individual, directed one semester research project taken in the fall and/or spring. Presentation of an acceptable project plan at the time of registration is required. A project report is required.

BIOL.4920L Senior Project: Biology (Formerly 81.492) - Credits: 4

Individual, directed one semester research project taken in the fall and/or spring. Presentation of an acceptable project plan at the time of registration is required. A project report is required.

BIOL.4930 Immunology (Formerly 81.493 & 81.593) - Credits: 3

A study of the nature of the immune response with sections on antibody structure, function and production; antigen-antibody reactions; immunogenetics; and immune regulation, protection and injury.

BIOL.4940 Immunology II, Current Topics - Credits: 3

This course will focus on recent advances in the field of immunology including the study of immune development and activation, response to infection, vaccines, immunoregulation, cancer immunotherapy, and immune dysfunction. Expanding upon the foundational immunologic concepts covered in BIOL.4930/BIOL.5930, students will gain knowledge of the innate and adaptive immune system at the structural, molecular, cellular, and functional levels. The objectives of Advanced Topics in Immunology are to gain a comprehensive and practical understanding of current immunological principles in research and clinical/applied sciences, learn to critically read and evaluate scientific literature, learn to interpret data, and design experiments that rigorously test hypotheses.

BIOL.4945 Host-Pathogen Interactions - Credits: 3
This transdisciplinary course will examine the interface between pathogens and their hosts at multiple levels. We will begin with molecular and cellular interactions between host and pathogen species and will expand to include ecological patterns, behavioral biology, and host-pathogen co-evolution. Following an introduction to infectious disease, microbiology, and immunology, we will critically read and evaluate scientific literature. The objectives of Host-Pathogen Interactions are to gain a comprehensive and practical understanding of host-pathogen dynamics, pattern of disease ecology, and host-pathogen co-evolution. Students will learn to critically read and evaluate scientific literature, interpret data, and design experiments.

**BIOL.4950L Immunology Laboratory (Formerly 81.495 & 81.595) - Credits: 2**

A series of basic laboratory exercises dealing with the preparation, isolation and characterization of antigens, antibodies and effector cells.

**BIOL.4960 Practicum Experience (Formerly 81.496) - Credits: 3**

On-campus and/or off-campus experiences are developed by the student in consultation with a member of the student’s major department. Specific requirements will vary depending upon department policies and the nature of the program undertaken by the student. The intent of the practicum experience is to provide an occasion for investigation of a scientific area and for applying techniques of problem solving and/or skills which are appropriate to the student’s major discipline. The practicum experience may not be substituted for a required course in the major.

**BIOL.4970 Directed Study: Biological Science (Formerly 81.497) - Credits: 1**

**BIOL.4980 Directed Study: Biology (Formerly 81.498) - Credits: 2**

**BIOL.4991 Directed Study: Biology (Formerly 81.499) - Credits: 3**

**LIFE.1000 Introduction to Biology (Formerly 83.100) - Credits: 3**

Presents environmental and organismal structural interrelationships and relates these to the chemical evolutionary basis of life. Suitable as a Natural Science Elective for a degree in the Division of Sciences.

**LIFE.1020 Life Science II (Formerly 83.102) - Credits: 3**

Emphasis is on systems structure and function. The cellular organization of plants and animals leads into physiological processes of higher organisms with great emphasis on humans. Among topics considered are nutrition and digestion, cellular metabolism, circulation, respiration, excretion, nervous and skeletal-muscular systems. Also considered are the chemical interactions of these systems with immunity, hormonal and reproductive processes. Suitable as a Natural Science Elective for a degree in the Division of Sciences.

**LIFE.1030L Life Science I Laboratory (Formerly 83.103) - Credits: 1**

Concerned with experimentation and interpretation of some of the concepts of Life Science I. Suitable as a Natural Science Elective for a degree in the Division of Sciences.

**LIFE.1040L Life Science II Laboratory (Formerly 83.104) - Credits: 1**

Involved with experimentation and interpretation of some of the concepts of Life Science II. Suitable as a Natural Science Elective for a degree in the Division of Sciences.

**LIFE.1050L Introduction to Biology Lab (Formerly 83.105) - Credits: 1**

Introduction to Biology Laboratory is a co-requisite course for the Introduction to Biology online lecture course - 83.100. The two courses together fulfill a GenEd Science requirement. The lab course can be taken concurrently with the lecture course or subsequent to it. Weekly labs correspond directly with the chapter assignments provided by the 83.100 instructors.

**LIFE.1060 Human Biology (Formerly 83.106) - Credits: 3**

Human Biology is designed to be an accelerated online summer course for non-science majors. This course will cover the major organ systems of the human body (cardiovascular, digestive, nervous, excretory, etc.), how they function and the disorders that arise when these systems don’t function as they were intended.

**LIFE.1070L Human Biology Laboratory - Credits: 1**

This course is a laboratory course for non-science majors and is
designed to accompany the Human Biology (LIFE.1060) lecture course. It will help reinforce the concepts investigated in the lecture course which involves the study of structure (anatomy) and function (physiology) of the major organ systems in the human body. Students will engage in the process of science, make observations, develop questions, collect and analyze data by performing virtual lab experiments, and communicate the results of scientific work in assigned weekly lab reports. Not suitable for credit towards any degree in the College of Sciences.

LIFE.1080 Biochemistry in the Kitchen - Credits: 3
This course is an integrated lecture and laboratory course for non-science majors and is designed to fulfill the core laboratory science requirement. The course will present fundamental principles of biochemistry in the context of cooking and foods to explain everyday phenomena. Class periods will include lecture and discussion and there will be laboratory assignments to be completed by the student.

LIFE.1100 Microbes and Society: Good, Bad and Ugly (Formerly 83.110) - Credits: 3
Examines historical aspects of microbial interactions with human society, including the use of microbes in food production, agriculture, biotechnology, industry and environmental preservation; explores bioterrorism, the problem of antibiotic resistance and surveys some historical and contemporary microbial diseases.

LIFE.1230 Nutrition and Disease (Formerly 83.123) - Credits: 3
Serves as an interdisciplinary survey course for students not majoring in biology, which deals with human nutrition as it relates to various chronic disease states. Methods of detection and treatment of the disorders are considered as well as general concepts of health promotion/disease prevention based on the Dietary Guidelines for Americans. Specific topics covered include the role of nutrition in: heart disease, diabetes, cancer, obesity, alcoholism, and eating disorders. Not suitable for credits toward any degree in the Division of Sciences.

LIFE.1270 Plants & Human Society Lab (Formerly 83.127) - Credits: 1
Plants and Human Society Laboratory is a co-requisite course for the Plants and Human Society online lecture course LIFE.1250. The two courses together fulfill the core science with laboratory requirement. The lab course can be taken concurrently with the lecture course or subsequent to it. Weekly labs correspond with the chapter assignments in the lecture course. Not suitable for credit towards any degree in the Division of Sciences.

LIFE.1280 Biochemistry in the Kitchen - Credits: 3
This course is an integrated lecture and laboratory course for non-science majors and is designed to fulfill the core laboratory science requirement. The course will present fundamental principles of biochemistry in the context of cooking and foods to explain everyday phenomena. Class periods will include lecture and discussion and there will be laboratory assignments to be completed by the student.

LIFE.1250 Plants and Human Society (Formerly 83.125) - Credits: 3
This course is designed to introduce undergraduate students to the fascinating world of plants and their significance in our everyday world. The use of plants in medicine, agriculture, and industry and their importance to humans and our environment will be emphasized. This course is also designed to fulfill the core science elective requirement for the non-science major. Not suitable for credit towards any degree in the Division of Sciences.
CHEM.1010 Applied Chemistry for Non-Scientists (Formerly 84.101) - Credits: 3

Provides an understanding of basic chemical principles -- atomic structure, bonding and interparticle forces, physical and chemical properties of matter through hands-on examination of matter and the analysis of problems dealing with these issues. This course is not available for credit for Science or Engineering majors.

CHEM.1020 Forensic Science for the Non-Scientist (Formerly 84.102) - Credits: 3

This course presents the inherently fascinating topics of crime and criminal investigations as a pathway for teaching the fundamental chemical concepts most often covered in an introductory non-majors course. This course capitalizes on the surge of interest in the scientific investigation of crime (as sparked by CSI and other television shows) and will collate the theme of forensic science with the fundamentals of chemistry. The course material will be continually updated with each offering.

CHEM.1040 Consumer Science 4-1-1: An Essential Guide - Credits: 3

This course introduces chemical principles through the context of examining current and topical consumer items such as drugs, food, dietary supplements and personal care products. Information presented will enhance awareness and confidence in understanding the products, scientific reports, news articles and making decisions about the utilization of available products. Chemistry 1040 is a combined lecture and lab demonstration course for non-science majors designed to fulfill the science with lab perspective (SCL) breadth of knowledge degree requirement.

CHEM.1050 Intro to the Discipline of Chemistry (Formerly 84.105) - Credits: 1

This course provides an introduction to chemistry as a career. Required of chemistry majors, it discusses historical aspects of the field and modern career paths, including academic and industrial chemistry. Students are presented with information regarding career opportunities in chemistry, including: analytical/environmental, forensics, inorganic, organic, materials, pharmaceutical/biochemistry, polymer, and theoretical/physical. They are also given an introduction to graduate school and teaching opportunities often pursued following the B.S. degree. In addition to lectures by the instructor, guests from industry and government laboratories are invited to discuss "what it means to be a chemist".

CHEM.1110 General Chemistry I (Formerly 84.111) - Credits: 3

Provides a one-semester survey of inorganic chemistry: the structure and properties of matter, chemical reactions, stoichiometry, gas laws, solution chemistry, kinetics, equilibrium, and acid-base chemistry.

CHEM.1120 General Chemistry II (Formerly 84.112) - Credits: 3

Surveys the basic principles of organic chemistry and biochemistry with emphasis on biochemical aspects of carbohydrates, lipids, proteins and nucleic acids. Various metabolic pathways are also emphasized.

CHEM.1130L General Chemistry Laboratory I (Formerly 84.113) - Credits: 1

Lab experiments designed to illustrate the principles covered in 84.111.

CHEM.1140L General Chemistry Laboratory II (Formerly 84.114) - Credits: 1

Uses laboratory experiments designed to illustrate the principles discussed in 84.112.

CHEM.1150 Principles of Chemistry (Formerly 84.115) - Credits: 3

The course provides an introduction to the basic concepts of Chemistry with an emphasis on critical thinking, problem-solving, and computational skills required for more advanced Chemistry courses. Topics include measurement, chemical calculations, problem solving logic, units analysis, chemical reactions, the periodic table, basic bonding theory and solutions. No previous Chemistry experience is assumed. There is no lab component to this course.

CHEM.1210 Chemistry I (Formerly 84.121) - Credits: 3

Provides an introduction to the basic concepts of chemistry through classroom discussions and demonstrations. Topics include chemical calculations, atomic structures, the periodic table, basic bonding theory, solutions, liquids, and gases. Restricted to science, engineering, and engineering technology majors.

CHEM.1220 Chemistry II (Formerly 84.122) - Credits: 3

Serves as a continuation of CHEM.1210. Topics include
thermodynamics; kinetics, acids and bases; an introduction to organic chemistry; chemical equilibrium; precipitation reactions; and electrochemistry. Restricted to science, engineering, and engineering technology majors.

CHEM.1230L Chemistry I Laboratory (Formerly 84.123) - Credits: 1
Studies experimental chemical principles and chemical transformation that is coordinated with topics considered in 84.121. Some of the more important reactions of elements, oxides, acids, bases, and salts are examined. Other topics include chemical separation, purification, preparation of inorganic salts, quantitative determinations dealing with the formula of a compound, gas laws, and colligative properties. Careful techniques and precise measurements are stressed. Restricted to science, engineering, and engineering technology majors.

CHEM.1240L Chemistry II Laboratory (Formerly 84.124) - Credits: 1
Serves as a continuation of the laboratory study begun in CHEM.1230L that is coordinated with topics of CHEM.1220. Topics include: thermochemistry, kinetics, spectroscopy, titration, pH, equilibrium reaction and constants. Some aqueous solution reactions and organic reactions are examined. Accurate measurements and precise instrumental and apparatus operation are expected. Restricted to science, engineering, and engineering technology majors.

CHEM.1350 Honors Chemistry I (Formerly 84.135) - Credits: 3
A more in-depth view of the topics covered in Chemistry I (84.121). Topics include chemical reactions and calculations, atomic history and structures, the behavior of gases and bonding theory. Open to students enrolled in the Honors Program, and may be taken instead of 84.121.

CHEM.1360 Honors Chemistry II (Formerly 84.136) - Credits: 3
A continuation of 84.135. A more in-depth view of the topics covered in Chemistry II (84.122). Topics include solutions, kinetics, thermodynamics, acids and bases, chemical equilibrium, electrochemistry and solubility. Open to students enrolled in the Honors Program, and may be taken instead of 84.122.

CHEM.2040 Introduction to Organic and Polymer Chemistry (Formerly 84.204) - Credits: 3
This course is a one-semester overview of organic chemistry for plastics engineering majors. Organic chemistry and its associated principles underscore a broad component of the plastics engineering curriculum. It is desirable therefore for such students to develop a basic appreciation of the fundamental reactions in organic chemistry, as well as an understanding of the interaction of organic compounds with their environment. Students will therefore be expected to secure a basic understanding of, e.g., chemical bonding, the chemistry of alkanes, alkenes, alkynes, aromatic compounds, substitution and elimination reactions, reactions of organic alcohols, ethers, epoxides, aldehydes and ketones, carboxylic acids, and amine compounds. When appropriate, examples will be provided that relate to those typical polymerization reactions (e.g. free-radical or ionic) employed to manufacture commercial polymer materials. Coverage will include synthesis of organic chemicals and polymers from natural and sustainable materials.

CHEM.2050L Principles Of Organic Chemistry Laboratory (Formerly 84.205) - Credits: 1
Introduction to the basic skills and techniques used in the synthesis, purification, and characterization of representative organic compounds. Open to Chemical Engineering students only.

CHEM.2210 Organic Chemistry I (Formerly 84.221) - Credits: 3
CHEM.2210 is the first course of a two-semester sequence of organic chemistry for students majoring in Chemistry, Chemical Engineering, Biological Sciences as well as pre-medical, pre-dental, pre-pharmaceutical and pre-veterinary students. The course focuses on acid-base properties, functional group labels, conformational analyses, stereochemistry, substitution, elimination and addition reactions of organic molecules. Curved arrow mechanisms and the relationship between organic structure and reactivity are emphasized. Aspects of organic spectroscopy are also introduced.

CHEM.2220 Organic Chemistry IIA (Formerly 84.222) - Credits: 3
A continuation of CHEM.2210 including an introduction to infrared and NMR spectroscopy and biochemistry. The application of organic reactions in multi-step synthesis is stressed.

CHEM.2230 Organic Chemistry IIB (Formerly 84.223) - Credits: 3
The course covers the chemical and mechanistic principles of organic reactions utilized in biological systems. Spectroscopy, organic reactions and related mechanisms of bio-molecules or small molecules in biological systems will be discussed from a
functional group perspective. Multiple examples from medicinal chemistry, chemical biology and biochemistry will be used to illustrate the concepts. Knowledge of organic mechanistic arrow-pushing formalism is required.

CHEM.2270L Organic Chemistry Laboratory IA
(Formerly 84.227) - Credits: 2

Laboratory work designed to emphasize the techniques of organic synthesis and the use of instrumentation for identification and characterization of organic compounds. Required for chemistry majors.

CHEM.2280L Organic Chemistry Laboratory IIA
(Formerly 84.228) - Credits: 2

A continuation of 84.227 including an introduction to semimicro organic techniques. Planning and successfully carrying out reactions published in the chemical literature are emphasized. Required for chemistry majors.

CHEM.2290L Organic Chemistry Laboratory IB
(Formerly 84.229) - Credits: 1

Reviews techniques, skills, and heuristic approaches in the synthesis, purification, and identification of organic compounds. IR, GC, and NMR instrumental methods are included. For Biology and Health Science majors.

CHEM.2300L Organic Chemistry Lab IIB (Formerly 84.230) - Credits: 1

A continuation of 84.229/CHEM 2290L. Biology and Health Science Majors.

CHEM.2600 Information Retrieval (Formerly 84.260) - Credits: 2

An introduction to the important chemical and chemical-related reference sources including journals, patents, technical publications, and compiled reference works, and instructions in their use. Assignments require the use of each source discussed. On-line searching using computerized chemical and chemical related databases is also introduced. Meets Core Curriculum Essential Learning Outcome for Information Literacy (IL).

CHEM.2800L Undergraduate Independent Study - Credits: 1-3

This is a guided study course for students who are working in a research lab or another types of chemistry-based research. Students will work with a faculty mentor to design and conduct a research project during the semester and they will prepare a report of their findings at the end of the semester. Credits earned in this course cannot be used to fulfill the advanced Chemistry elective courses or requirements for the Chemistry minor. This course can only be used for up to 3 hours of free elective credit.

CHEM.3010 Special Topics: Chemistry (Formerly 84.301) - Credits: 3

CHEM.3030 Forensic Science I (Formerly 84.303) - Credits: 3

CHEM.3040 Forensic Science II (Formerly 84.304) - Credits: 3

Drug Analysis I, Drug Analysis II, Chemistry of combustion and Arson, Chemistry of color and colorants, Analysis of ink and paints, Chemistry of polymers, Analysis of fibers and papers.

CHEM.3050L Forensic Science I Laboratory (Formerly 84.305) - Credits: 1

CHEM.3060L Forensic Science II Laboratory (Formerly 84.306) - Credits: 1

CHEM.3130 Analytical Chemistry I (Formerly 84.313) - Credits: 3

Focuses on the evaluation of analytical data, aqueous and non-aqueous acid-base systems, oxidation reduction and complexation equilibria, solubility and precipitation, solvent extraction, ion-exchange and chromatographic methods.

CHEM.3140 Analytical Chemistry II (Formerly
84.314) - Credits: 3
Introduces modern instrumental methods of chemical analysis. Topics to be discussed include ultraviolet, infrared nuclear magnetic resonance, emission and atomic absorption spectroscopy. Mass spectrometry, chromatography, thermal and electrochemical methods of analysis will also be covered.

CHEM.3150L Analytical Chemistry Laboratory I
(Formerly 84.315) - Credits: 2
Experiments emphasizing the topics presented in 84.313 are conducted.

CHEM.3160L Analytical Chemistry Laboratory II
(Formerly 84.316) - Credits: 2
Presents laboratory experiments designed to complement the coverage of topics in 84.314.

CHEM.3390 Physical Chemistry Principles (Formerly 84.339) - Credits: 2
A one-semester course designed for plastics engineering majors. Physical chemical concepts of importance to plastics and polymeric materials are emphasized and include kinetics, spectroscopy, phase rule, and statistical thermodynamics.

CHEM.3440 Physical Chemistry I (Formerly 84.344) - Credits: 3
Covers basic physical chemical topics: laws of thermodynamics, solutions, chemical and phase equilibria, electrochemistry, kinetics, atomic, and molecular structure. Meets Core Curriculum Essential Learning Outcome for Quantitative Literacy (QL).

CHEM.3450 Physical Chemistry II (Formerly 84.345) - Credits: 3
CHEM.3450 serves as a continuation of CHEM.3440. Topics covered include the failures of classical physics that led to the rise of quantum mechanics, the postulates of quantum mechanics, the particle-in-a-box, the harmonic oscillator, the rigid rotator, the hydrogen atom and multi-electron atoms. Applications of these quantum mechanical models to chemistry and spectroscopy are discussed, along with aspects of chemical bonding.

CHEM.3460L Analytical Chemistry Laboratory I
(Formerly 84.346) - Credits: 2
Laboratory work designed to exemplify principles covered in CHEM.3390.

CHEM.3470L Physical Chemistry Laboratory II
(Formerly 84.347) - Credits: 1
Provides laboratory work designed to exemplify the principles of chemical kinetics, equilibrium, and spectroscopy.

CHEM.3500L Physical Bioinorganic Laboratory
(Formerly 84.350) - Credits: 2
Coordination compounds are utilized in a core of experiments to illustrate basic physicochemical techniques and analysis of experimental data in electrochemistry and kinetics. A project lab is carried out to apply and extend techniques learned.

CHEM.3600 The Responsible Chemist (Formerly 84.360) - Credits: 3
This course is required of chemistry majors and addresses ethical, regulatory, and environmental aspects of their profession. Students are exposed to a wide range of research integrity issues that include TSCA (Toxic Substance Control Act), SOPs (Standard Operating Procedures) and quality management. Compliance issues include an overview of OSHA (Occupational Safety and Health Administration) and EPA (Environmental Protection Agency), as well as an introduction to patent law. The importance of maintaining integrity in their discipline is emphasized, and case studies are presented for study and discussion. Meets Core Curriculum Essential Learning Outcome for Social Responsibility & Ethics (SRE) and Essential Learning Outcome for Written & Oral Communication (WOC).

CHEM.4020L Organic Synthesis and Characterization Lab - Credits: 3
An advanced project-based organic chemistry laboratory course. Students will separate mixtures of compounds by chromatographic methods, elucidate structures using spectroscopic techniques and consult the chemical literature to design and execute a multi-step synthesis. Emphasis on laboratory work with discussion of theoretical background.

CHEM.4030 Polymer Science I (Formerly 84.403) - Credits: 3
Coverage of step and chain growth polymerizations, kinetics and mechanism, copolymerization, ionic and free radical polymerizations, and industrially important polymers.
CHEM.4070 Undergraduate Thesis (Formerly 84.407) - Credits: 3
Research in biochemistry, electrochemistry or analytical, organic, inorganic, physical or polymer chemistry. Progress report required.

CHEM.4080 Undergraduate Thesis II (Formerly 84.408) - Credits: 3
A continuation of 84.407. Both semesters must be taken and not more than six credits may be used in meeting degree requirements. A written thesis and seminar are required. The written thesis is to follow the conventional form of introduction, literature survey, data, results, and conclusions. One copy of the thesis must be filed in the Department office.

CHEM.4430 Advanced Inorganic Chemistry (Formerly 84.443) - Credits: 3
The chemical behavior, structure and methods of preparation and nomenclature of the more common elements and their compounds.

CHEM.4450L Advanced Inorganic Lab (Formerly 84.445) - Credits: 2
Laboratory to study the reactions of ions in aqueous solutions and to carry out inorganic syntheses and characterizations.

CHEM.4500 Introduction To Biochemistry (Formerly 84.450) - Credits: 3
An introductory study of the fundamental principles of biochemistry including the chemistry of proteins, carbohydrates, nucleic acids and lipids, thermodynamics, kinetics and mechanisms of enzyme action, intermediary metabolism and selected topics in molecular biology.

CHEM.4510 Biochemistry II - Credits: 3
A continuation of CHEM.4500 with emphasis on metabolic pathways of amino acids and nucleic acid, biosynthesis of proteins and selected topics in molecular biology and various areas of biochemistry. This course will be co-convened with CHEM.5510, the graduate version of Biochemistry II.

CHEM.4550L Laboratory in Modern Biochemistry and Biophysics - Credits: 2
This is a laboratory course designed to teach basic biochemistry techniques using a series of well-characterized proteins in a research-like setting. The course will meet twice a week throughout the semester. The first half of the semester will be focused on teaching specific biochemical techniques. In the second half of the semester, students will develop an independent research question using protein(s) from a list using the techniques that were learned in the first half of the semester. Students will produce a report using an ACS journal style based on their results and they will also present their results to the class at the end of the semester.

CHEM.4880 Computational Chemistry - Credits: 3
The field of computational chemistry involves the quantitative treatment of the quantum and classical depiction of atoms and molecules. The first part of the class will involve the quantum chemistry approach which will include semi-empirical theory, the Hartree-Fock model, post-Hartree-Fock models, and Density Functional Theory. Quantum chemistry calculations will be performed using the Gaussian software package. The second part will include classical dynamics of molecules using Molecular Mechanics concepts and empirical force-fields. Students will be introduced to numerical algorithms for the calculation of atomic forces and numerical schemes for the integration of Newton’s equations of motion. Students will learn how to set up, initialize, and run Molecular Dynamics simulations.
Bachelor’s-to-Master’s

The Computer Science Department offers a five-year combined BS/MS program, in which students earn both Bachelor and Master of Science degrees.

Computer Science majors who want to take advantage of this program should consider taking one or two qualifying graduate courses during their senior years. COMP.5020 (https://www.uml.edu/catalog/courses/COMP/5020) Foundations of Computer Science and COMP.5030 (https://www.uml.edu/catalog/courses/COMP/5030) Algorithms are good choices. Either of these can count as an undergraduate computer science elective and as a master’s degree course. Only credits beyond the 120 required for the BS can be double-counted.

The rules governing double-counting of courses are as follows:

- Any graduate course allowed for graduate computer science credit may be taken as an undergraduate course and double-counted.
- With the permission of the undergraduate coordinator, certain project-oriented pairs of graduate courses may be taken for the undergraduate project sequence, and may be double-counted.
- The double-counting of 4000-level courses requires case-by-case Graduate Committee approval.

Students must satisfy prerequisites before they enroll in courses. Please note that some graduate courses offered by the Computer Science Department do not carry credit even for Computer Science students. For example, you cannot receive credit for COMP.5000 (https://www.uml.edu/catalog/courses/COMP/5000)

To be accepted into this program, you must have good grades and apply in your junior year. For more information, see graduate catalog.

For additional information about BS/MS program, contact the Department of Computer Science. (https://www.uml.edu/Sciences/computer-science/Contact.aspx)
COMP.1000 Media Computing (Formerly 91.100) - Credits: 3

An introductory course to computer programming using multimedia applications such as images, video and audio. Linear data structures representing multimedia data are manipulated with loops and conditionals in the Python language.

COMP.1005 An Introduction to Programming for Data Science - Credits: 3

Linguists, chemists, business analysts, social scientists, and essentially everyone needs computational approaches to structure, analyze and present their data. However, non-experts are often intimidated to start programming and may struggle to see the numerous possibilities it may open up for their field of study. Using the poplar and easy-to-learn Python language, this course offers a practical introduction to basics of programming and how it can be used to analyze, structure, and visualize data. Students will also gain hands-on experience with a number of popular libraries useful for data preparation and analysis.

COMP.1010 Computing I (Formerly 91.101) - Credits: 3

Introduction to computing environments: introduction to an integrated development environment; C, C++, or a similar language. Linear data structures; arrays, records, and linked lists. Abstract data types, stacks, and queues. Simple sorting via exchange, selection, and insertion, basic file I/O. Programming style documentation and testing. Ethical and social issues. Effective Fall 2013, Co-req 91.103 Computing 1 Lab.

COMP.1020 Computing II (Formerly 91.102) - Credits: 3

Computing II focuses on the implementation and applications of data structures, including arrays, linked lists, stacks, queues, trees, binary trees, binary search trees, heaps, graphs, and hash tables. Recursive approaches are used. Performance analysis is discussed. Attention is paid to programming style, documentation, and testing. This course includes extensive laboratory work. Effective Fall 2013, Co-req: Computing 2 Lab.

COMP.1030L Computing I Lab (Formerly 91.103) - Credits: 1

This is the lab class for COMP.1010 Computing I. This class must be taken with COMP.1010 Computing I in the same semester.

COMP.1040L Computing II Lab (Formerly 91.104) - Credits: 1

This is a lab class for 91.102 Computing II. This class must be taken with 91.102 Computing II in the same semester.

COMP.1080 Intro to App Des & Mobile Comp (Formerly 91.108) - Credits: 3

This course is an introduction to design principles of applications ("apps") that run on mobile devices (smart phones and tablet computers). The course focuses on software interaction design and computational thinking. Students will gain theoretical knowledge and design skills in these domains by building a series of apps that run on the Android platform using MIT App. Inventor software. The course will also include discussion of societal impacts of computing.

COMP.1110 First Year Seminar for Computer Science Students - Credits: 1

This course is designed to acclimate incoming students to their new University environment. Students will learn about the Computer Science field, the program at the University, its faculty, and other resources useful for success.

COMP.1120 Undeclared Science Seminar (Formerly 91.112) - Credits: 1

Discussions will be conducted on a wide range of topics in the sciences to familiarize the student with the programs, procedures, research, and educational opportunities at the University.

COMP.1130 Exploring the Internet (Formerly 91.113) - Credits: 3

An introduction to internet technologies and how they intersect with social, political, and economic issues. Includes: the history of the internet, how it’s presently managed, how information is transferred between servers and clients, collaborative web technologies, search engines, encryption, digital rights management, certificate authorities, phishing and other malware, and privacy concerns. Students will build a basic website using HTML and CSS.

COMP.2010 Computing III (Formerly 91.201) - Credits: 3

This course presents an introduction to object-oriented software development using the C++ programming language. The main ideas are encapsulation, class hierarchy and inheritance, polymorphism, copy control, operator
overloading, dynamic memory management, and templates. Additional topics include the Standard Template Library (containers and iterators), class design diagrams, and exception handling.

**COMP.2010R Computing III Lab - Credits: 1**

This is the lab class for COMP.2010 Computing III. This class must be taken with COMP.2010 Computing III in the same semester.

**COMP.2030 Assembly Language Programming (Formerly 91.203) - Credits: 3**

Presents the organization and operation of a conventional computer, including principal instruction types, data representation, addressing modes, program control, I/O, assembly language programming, including instruction mnemonics, symbolic addresses, assembler directives, system calls, and macros, the usage of text editors, symbolic debuggers, and loaders, and the use of pseudocode in guiding structured assembly language programming.

**COMP.2030R Assembly Language Programming Lab - Credits: 1**

This is the lab class for COMP.2030 Computer Organization and Assembly Language. This class must be taken with COMP.2030 in the same semester.

**COMP.2040 Computing IV (Formerly 91.204) - Credits: 3**

Advanced C++ programming, which deepens students’ understanding of object-oriented analysis and design. Basic software engineering principles and practice, including work with APIs. Topics may include program translation, web software, parsing, and regular expressions.

**COMP.2110 Computer Science for SRT Applications (Formerly 91.211) - Credits: 3**

This course is an introduction to C programming, with applications in sound recording technology. Students will write and execute several programs that perform operations pertinent to SRT, including manipulating MIDI codes, performing simple signal processing functions, processing sampled data, and synthesizing sound algorithmically. Not for computer science majors.

**COMP.2120 Special Topics: Sound Thinking (Formerly 91.212) - Credits: 3**

Special Topics: Sound Thinking is an interdisciplinary elective for students at the sophomore level and above that explores the intersection of computing and music. The course explores the properties of sound, musical form, non-traditional notation, music programming, the computer as a musical instrument, and live performance. It is co-taught by Music and Computer Science faculty.

**COMP.2300 Introduction to Computer Security (Formerly COMP.3611) - Credits: 3**

This course introduces students to introductory concepts in cybersecurity. The course will cover generic topics such as introduction to networks, security vulnerabilities in networking protocols, the confidentiality, integrity and availability (CIA) triad, basic cryptography concepts, key management, cryptographic protocols and practical applications of cryptography. For topics in computer security, this course will cover an overview of operation systems security (particularly Linux), password security, access control mechanisms, patching, vulnerability analysis, intrusion detection, auditing, system hardening, virtualization, and security policies. For topics in Network Security, this course will cover major threats affecting networks such as Denial of Service (DoS), brute-force, malicious packets, etc. There will be a high-level overview on network specific attacks such as replay, reflection and MitM and how modern authentication and communication protocols like SSH and TLS prevent them. For topics in application security, this course will overview major threats affection application such as Buffer Overflows, Race Conditions, XSS, Injection attacks, etc. and techniques to prevent them.

**COMP.2350 Cyber Crime Investigation (Formerly COMP.4611) - Credits: 3**

This class introduces students to computer forensics and network forensics, which are two major components of digital forensics. The class covers topics including legal compliance, applicable laws, affidavits, root cause analysis, case law, chain of custody, digital Investigations, authentication of evidence, metadata, using virtual machines for analysis, how to testify, E-Discovery, HIPAA/FERPA, computer security act, Sarbanes - Oxley Act, Gramm - Leach - Bliley Act, Children’s Online Privacy Protection Act (COPPA), payment card industry data security standard (PCI DSS), state, US and international standards/Jurisdictions, laws and authorities, US Patriot Act, problem solving, log-file analysis, interlacing of device and network forensics, etc.

**COMP.3010 Organization of Programming Languages (Formerly 91.301) - Credits: 3**

Analytical approach to the study of programming languages. Description of the salient features of the imperative, functional, logical, and object-oriented programming paradigms in a suitable metalanguage such as Scheme. Topics include

**COMP.3040 Foundations of Computer Science**  
(Formerly 91.304) - Credits: 3

**COMP.3050 Computer Architecture**  
(Formerly 91.305) - Credits: 3

Examines the basic functional components of a computer system including the CPU, memory systems, and I/O systems. Each of these three areas will be developed in detail with a focus on the system design and component integration. Topics will include CPU control and ALU operation, computer timing, data address and I/O bus activity, addressing model, programmed and DMA I/O, and instruction sets and microcode.

**COMP.3080 Operating Systems**  
(Formerly 91.308) - Credits: 3

Presents an introduction to major operating systems and their components. Topics include processes, concurrency and synchronization, deadlock, processor allocation, memory management, I/O devices and file management, and distributed processing. Techniques in operating system design, implementation, and evaluation will be examined.

**COMP.3090 Database I**  
(Formerly 91.309) - Credits: 3

The Database I and II course pair provides students with a comprehensive introduction to data modeling, design of databases, use of database management systems for applications, and exploration into the building of databases. Database II focuses on database design with Entity-Relationship (E-R) models. Students design and implement a web-based database using MySQL and PHP.

**COMP.3300 Introduction to Malware Analysis** - Credits: 3

This course covers a variety of topics on malware analysis, including basic and advanced static analysis and dynamic analysis, virtual machines, assembly language, reverse engineering tools, anti-reverse engineering techniques, and shell code analysis. Students will be able to apply the techniques to detect malware behaviors in binaries and systems.

**COMP.3310 Cyber Defense** - Credits: 3

The course objectives are to (1) train students on designing, implementing, and evaluating operating systems, enterprise networks, protocols, and services that are secure from modern threats and attacks and (2) train students on performing security and vulnerability analysis of the aforementioned technologies. The focus will be on highly used protocols such as Secure Shell (SSH), Remote Desktop Protocol (RDP), Active Directory (AD), Domain Name System (DNS), Transport Layer Security (TLS), Virtual Private Network (VPN), OpenID Connect (OID), OAuth, and services such as email servers and web servers. The overarching goal is to understand the underlying principles behind the technologies, what makes these technologies inherently insecure and the steps to make them more resilient to attacks.

**COMP.3350 Special Topics**  
(Formerly 91.350) - Credits: 3

Topics of mutual interest to the instructor and student(s). (Formerly 91.350).

**COMP.4010 Software Project I**  
(Formerly 91.401) - Credits: 3

Specification, design, and implementation of a one- or two-semester software project proposed to a directing faculty member. Projects may be proposed as a one- or two-semester effort based on faculty approval. A two-semester effort requires subsequent registration for COMP.4020. Prerequisite: Students must submit a proposal to the directing faculty member, obtain his/her signed approval, and forward a copy of the signed proposal to department chairperson.

**COMP.4020 Software Project II**  
(Formerly 91.402) - Credits: 3

A continuation of COMP.4010. Students must submit a
proposal to the directing faculty member, obtain his/her signed approval, and forward a copy of the signed proposal to the department chairperson.

COMP.4040 Analysis of Algorithms (Formerly 91.404) - Credits: 3

Development of more sophisticated ideas in data type and structure, with an introduction to the connection between data structures and the algorithms they support. Data abstraction. Controlled access structures. Trees, lists, stacks, queues, graphs, arrays, hash tables. Algorithm design strategies such as divide and conquer. Elementary techniques for analysis; asymptotic analysis, recursion equations, estimation methods, elementary combinatorial arguments. Examination of problem areas such as searching and sorting, and the indicated representations and algorithms. The student will use the techniques learned in this course and in previous courses to solve a number of logically complex programming problems using pseudocode, with an emphasis on establishing algorithmic correctness and estimating time and space complexity.

COMP.4060 Compiler Construction I (Formerly 91.406) - Credits: 3

Includes both theory and practice. A study of grammars; specification and classes; the translation pipeline: lexical analysis, parsing, semantic analysis, code generation and optimization; and syntax-directed translation. Use of automatic generation tools in the actual production of a complete compiler for some language.

COMP.4110 Software Engineering I (Formerly 91.411) - Credits: 3

Software Engineering is an essential discipline for any computer science major. In this class you will learn skills that will help you design and build software projects for advanced computer science classes. This course provides an introduction to systematic techniques for development of software, i.e., "the Engineering of Software". Topics to be discussed include software life-cycle, group coordination, requirements specification, software design, software testing and software maintenance. Emphasis is given to the development of one complex software system and the system documentation necessary for such a complete software product. The students will mock the software cycle via a medium-to-large semester-long project.

COMP.4120 Software Engineering II (Formerly 91.412) - Credits: 3

Software development methodologies for large-scale systems. Project organization, life cycle concept, data modeling, structured analysis and design, information hiding, and the use of computer-aided software engineering (CASE) tools. Team projects are required; these emphasize the design, documentation, and maintenance of complex software systems. Not open to students who have taken 91.523 Software Engineering I.

COMP.4130 Data Communications I (Formerly 91.413) - Credits: 3

This course provides an introduction to fundamental concepts in the design and implementation of computer communication networks, their protocols, and applications. Topics include: TCP/IP and OSI layered network architectures and associated protocols, application layer, network programming API (sockets), transport, congestion, flow control, routing, addressing, autonomous systems, multicast and link layer. Examples will be drawn primarily from the Internet.

COMP.4140 Data Communications II (Formerly 91.414) - Credits: 3

A continuation of 91.413. Topics include Multimedia Networks, network Management, Network Security, Wireless and Mobile Networks. Students will track discussion in IETF committees and work in a dedicated network laboratory. Meets Core Curriculum Essential Learning Outcome for Applied & Integrative Learning (AIL) and Information Literacy (IL).

COMP.4200 Artificial Intelligence (Formerly 91.420) - Credits: 3

Topics include: search techniques and their properties, including A*; game-playing, including adversarial and stochastic search; probabilistic reasoning, including Markov Decision Processes and Hidden Markov Models; and reinforcement learning, including value iteration and q-learning. Topics are developed theoretically and with programming assignments. The course includes a student-directed final project and paper.

COMP.4210 Data Mining (Formerly 91.421) - Credits: 3

This introductory data mining course will give an overview of the models and algorithms used in data mining, including association rules, classification, and clustering. The course will teach the theory of these algorithms and students will learn how and why the algorithms work through computer labs.

COMP.4220 Machine Learning (Formerly 91.422) - Credits: 3
This introductory course gives an overview of machine learning techniques used in data mining and pattern recognition applications. Topics include: foundations of machine learning, including statistical and structural methods; feature discovery and selection; parametric and non-parametric classification; supervised and unsupervised learning; use of contextual evidence; clustering, recognition with strings; small sample-size problems and applications to large datasets.

COMP.4230 Computer Vision I (Formerly 91.423 & 91.523) - Credits: 3

Computer vision has seen remarkable progress in the last decade, fueled by the ready availability of large online image collections, rapid growth of computational power, and advances in representations and algorithms. Applications range from 3-D scene reconstruction, to visual Simultaneous Localization and Mapping (SLAM) for robotics, to real-time human body pose estimation. This introductory computer vision course explores various fundamental topics in the area, including the principles of image formation, local feature analysis, segmentation, multi-view geometry, image warping and stitching, structure from motion, and object recognition.

COMP.4240 Introduction to Reinforcement Learning - Credits: 3

This course provides a solid introduction to the field of Reinforcement Learning (RL) and Decision Making. The students will learn about the basic blocks, main approached, and core challenges of Reinforcement Learning including tabular methods, Finite Markov Decision Processes, Dynamic Programming, Monte Carlo Methods, Temporal-Difference learning, policy search, function approximation, exploration, and generalization. Through a combination of lectures, and written and coding assignments, students will become well versed in key ideas and techniques for RL. Assignments will include the basics of reinforcement learning. In addition, students will advance their understanding and the field of RL through a final project.

COMP.4270 Computer Graphics I (Formerly 91.427) - Credits: 3

Introduction to graphics systems and concepts. History of graphics. Introduction to hardware, software, and mathematical tools. Graphics languages and APIs (OpenGL and other traditional and web-based libraries). Graphics data structures and algorithms for 2D and 3D modeling and viewing. Input, archiving, and display architectures.

COMP.4280 Computer Graphics II (Formerly 91.428) - Credits: 3

An advanced course in computer graphics for students familiar with basic issues in computer graphics. Details on hidden line and surface removal, 2D and 3D curve and surface generation, rendering, illumination, and color models, realism through precision (ray tracing) and imprecision (fractals), modern hardware architectures, and animation and simulation systems.

COMP.4290 Bioinformatics for CS - Credits: 3

Complete genomic sequences of human, other mammals, and numerous other organisms are known for some time. From early on, comparisons or analyses of genomic sequences require aids of computer programming. After brief introductions to molecular biology for Computer Science students, the course will examine computer algorithms used in bioinformatics problems including sequence alignment, phylogeny, DNA sequencing, and data analyses.

COMP.4420 Natural Language Processing (Formerly 91.442 & 91.542) - Credits: 3

This course introduces principles and techniques behind natural language processing (NLP), and covers a large selection of important automatic text processing tasks. Selected topics include n-gram language models, part-of-speech tagging, statistical parsing, word sense disambiguation, discourse segmentation, information extraction, sentiment analysis, machine translation. Quantitative techniques are emphasized, with a focus on applying statistical models to large collections of text. The course provides students with a hands-on experience in building a substantial NLP application of their choice.

COMP.4500 Mobile Robotics I (Formerly 91.450) - Credits: 3

An introduction to robotics, including laboratory. In the lab, students build and program robots. Topics include sensors, locomotion, deliberative, reactive, and hybrid control architectures, computer vision, application domains, and current research.

COMP.4510 Mobile Robotics II (Formerly 91.451) - Credits: 3

Advanced topics in robotics, including laboratory. Topics to be covered include probabilistic methods, including sensor modeling, hidden Markov models, particle filters, localization, and map making. Research-level robots are used in the laboratories.

COMP.4600 Selected Topics (Formerly 91.460) - Credits: 3
Depends on faculty interest, student demand, and developments in the field.

COMP.4610 Graphical User Interface Programming I (Formerly 91.461) - Credits: 3

This is a first course in the design and implementation of graphical user interfaces (GUIs) for web-based environments. The course requires the completion of several client-side programming projects that are evaluated on design and layout of the user interface, coding style, and comprehensiveness of documentation. Students learn to create web pages using HTML, CSS, JavaScript, jQuery, and a variety of jQuery plugins. Server-side techniques using PHP and MySQL are explored if time permits. The course may be taken on its own, but is intended to be followed by 91.462 to complete a two-course CS project sequence.

COMP.4620 Graphical User Interface Programming II (Formerly 91.462) - Credits: 3

A second course in the design and implementation of graphical user interfaces for web-based environments. The course requires the completion of a semester-long project done with others as a team. It explores the writing of a project proposal, the development and presentation of alpha and beta versions, usability testing, and a final presentation to an external audience.

COMP.4630 Mobile App Programming I - Credits: 3

This is a first course in the design and implementation of mobile applications. The course requires the completion of several Android programming projects that are evaluated on the functional correctness, coding style, and documentation. Students learn the fundamental principles of Android components, application architectures, and common Android libraries to create non-trivial mobile applications. The course may be taken on its own, but is intended to be followed by Mobile App Programming II to complete a two-course CS project sequence.

COMP.4631 Mobile App Programming II - Credits: 3

A second course in the design and implementation of mobile applications on Android platform. The course requires the completion of a semester-long project done with others as a team. It explores the writing of a project proposal, the development and presentation of alpha and beta versions, usability testing, and a final presentation to an external audience.

COMP.4650 Introduction to IoT Security and Privacy - Credits: 3

The Internet of Things (IoT) has broad application domains including healthcare, smart home, retail, manufacturing, agriculture, environmental monitoring and industrial automation. This course introduces different aspect of IoT security and privacy on hardware, software, network, and data. The key objectives include: understanding IoT frameworks, applications and security and privacy concerns; being familiar with IoT hardware security; understanding IoT system security; mastering IoT network security; understanding the IoT data security and privacy.

COMP.4800 Honors Project I (Formerly 91.480) - Credits: 3

This course provides an undergraduate research experience for Computer Science majors enrolled in the Honors Program. Each student develops a project idea in consultation with the instructor. The student writes a proposal for the project, reads the relevant literature, performs the project, writes a project report or thesis, and makes an oral presentation about the project.

COMP.4810 Honors Project II (Formerly 91.481) - Credits: 3

In this course, students continue and complete the project started in 91.480 Honors Project I.

COMP.4900 Directed Studies in Computer Science (Formerly 91.490) - Credits: 1-4

Individual study for a student desiring more advanced or more specialized work. This course may not be taken more than twice and may not be substituted for scheduled offerings. Prerequisite: Students must submit a proposal to the directing faculty member, obtain his/her signed approval, and forward a copy of the signed proposal to the department chairperson.

COMP.4930 Cooperative Education in Computer Science (Formerly 91.493) - Credits: 1

Supervision of cooperative educational experiences in Computer Science.

MSIT.3010 Organization of Programming Languages (Formerly 94.301) - Credits: 3

Analytical approach to the study of programming languages. Description of the salient features of the imperative, functional, logical, and object-oriented programming paradigms in a suitable metalanguage such as Scheme. Topics include iteration, recursion, higher-order functions, types, inheritance, unification, message passing, orders of evaluation, and scope rules. Elementary syntactic and semantic descriptions.
Implementation of simple interpreters. Note: This course is for CS graduate students needing to fulfill prerequisite requirements. It is not available to CS undergraduates without specific permission from the Undergraduate Coordinator.

**MSIT.3040 Foundations of Computer Science**  
(Formerly 94.304) - Credits: 3

A survey of the mathematical foundations of Computer Science. Finite automata and regular languages. Stack Acceptors and Context-Free Languages. Turing Machines, recursive and recursively enumerable sets. Decidability. Complexity. This course involves no computer programming. This course is for CS graduate students needing it to fulfill prerequisite requirements. It is not available to CS undergraduates without specific permission from the Undergraduate Coordinator.

**MSIT.3050 Computer Architecture**  
(Formerly 94.305) - Credits: 3

Examines the basic functional components of a computer system including the CPU, memory systems, and I/O systems. Each of these three areas will be developed in detail with a focus on the system design and component integration. Topics will include CPU control and ALU operation, computer timing, data address and I/O bus activity, addressing model, programmed and DMA I/O, and instruction sets and microcode. This course is for CS graduate students needing it to fulfill prerequisite requirements. It is not available to CS undergraduates without specific permission from the Undergraduate Coordinator.

**MSIT.3080 Introduction to Operating Systems**  
(Formerly 94.308) - Credits: 3

Presents an introduction to major operating systems and their components. Topics include processes, concurrency and synchronization, deadlock, processor allocation, memory management, I/O devices and file management, and distributed processing. Techniques in operating system design, implementation, and evaluation will be examined. This course is for CS graduate students needing it to fulfill prerequisite requirements. It is not available to CS undergraduates without specific permission from the Undergraduate Coordinator.

**MSIT.4040 Analysis of Algorithms**  
(Formerly 94.404) - Credits: 3

Development of more sophisticated ideas in data type and structure, with an introduction to the connection between data structures and the algorithms they support. Data abstraction. Controlled access structures. Trees, lists, graphs, arrays; algorithms design strategies; backtracking, greedy storage, divide and conquer, branch and bound. Elementary techniques for analysis; recursion equations, estimations methods, elementary combinatorial arguments. Examination of problem areas such as searching, sorting, shortest path, matrix and polynomial operations, and the indicated representations and algorithms. The student will use the techniques learned in this course and in previous courses to solve a number of logically complex programming problems. This course is for CS graduate students needing it to fulfill prerequisite requirements. It is not available to CS undergraduates without specific permission from the Undergraduate Coordinator.

ATMO.1020 Weather Forecasting Seminar (Formerly 85.102) - Credits: 1

Introduction to forecasting techniques including use of upper air observations and numerical forecast guidance. This course is intended primarily for students majoring in the various options of environmental science. It does not satisfy specific science requirements for majors in the Division of Science.

ATMO.1200 The Nature of Science (Formerly 85.120) - Credits: 3

In this course students are introduced to the role of critical thinking in the development of scientific theories. Several major areas of science are explored with a focus on the link between conceptual thought and the resulting physical laws. The importance to society of scientists and citizens making informed decisions on science/technology issues are examined. Methods to gather and assess data are discussed and a number of examples of the use of scientific principles to prove fact or fraud are studied. The students will learn how to question propositions put before them.

ATMO.1410 Weather and Climate (Formerly 85.141) - Credits: 3

General meteorology course. Topics include atmospheric composition, solar radiation, temperature, moisture and condensation relationship between air pressure and wind, weather patterns, severe weather, optical phenomena in the atmosphere, and the behavior and possible change of climate. Appropriate for KCS major science elective.

ATMO.1430L Weather and Climate Laboratory (Formerly 85.143) - Credits: 1

The laboratory encourages students to apply knowledge from the lectures to a variety of atmospheric and climatic phenomena developed from data analysis, experimentation, and maps. Synthesis and critical thinking are encouraged in the solution of problems.

ATMO.1500 The Physical Science of Climate Change - Credits: 3

Due to the complexity of climate change, there are many important dimensions to the problem, including political, economic, social, and ethical. This course focuses on the physical science dimension of climate change: what are the key scientific principles that are needed to understand the causes and physical impacts of climate change, and to evaluate possible responses and their likely effectiveness. The class is offered for both science and non-science majors.

ATMO.1520L The Physical Science of Climate Change Lab - Credits: 1

This laboratory is designed to accompany the lecture material of The Physical Science of Climate Change (ATMO.1500), which focuses on the key scientific principles that are needed to understand the causes and physical impacts of climate change, and to evaluate possible responses and their likely effectiveness. The course is offered for both science and non-science majors.

ATMO.1990L Atmospheric Sciences 1000 level elective Lab (Formerly 85.199) - Credits: 1

Atmospheric Sciences 1000 level elective Lab.

ATMO.2130L Atmospheric Science Laboratory (Formerly 85.213) - Credits: 1

The plotting and analysis of meteorological data is introduced, with the goal of understanding the basis for various ways of looking at weather systems. After each technique is introduced, students will see the computer counterpart using the workstations in the weather lab. Both the strengths and weaknesses of automated displays are made clear to students, thus making them better able to interpret the computer images on a daily basis.

ATMO.2140L Meteorology Analysis Laboratory (Formerly 85.214) - Credits: 1

The use of the skew-T diagram to understand the vertical structure in the atmosphere is the main focus of this course. Students will learn to plot and analysis atmospheric sounding data, and to recognize various structures in the analyzed data. Both hand and computer-aided analysis will be compared.

ATMO.2340 Scientific FORTRAN Programming (Formerly 85.234) - Credits: 3

A basic course in computer programming using FORTRAN 90/95. Topics include programming arithmetic, decisions, repetition, input/output structures, arrays and array processing, and simple algorithms for searching and sorting.

ATMO.2910 Practicum in Meteorology (Formerly 85.291) - Credits: 1-3

ATMO.3010 Atmospheric Thermodynamics (Formerly 85.301) - Credits: 3

The variables of state, Charles’ law, Boyle’s law, equation of state for an ideal gas, mixtures of gases. Thermodynamics of dry air, water vapor and moist air. Clausius-Clapeyron

ATMO.3040 Methods in Meteorology (Formerly 85.304) - Credits: 3
The application of vector analysis to dynamic meteorology. Three-dimensional divergence and vorticity, circulation, and solenoids. Selected ordinary and partial differential equations of fluid mechanics and their solutions. Spectral decomposition of hemispheric wave motion.

ATMO.3050 Methods in Meteorology II (Formerly 85.305) - Credits: 3
Fundamentals of numerical weather prediction. Data analysis methods in meteorology using the techniques of curve fitting, correlation, and power spectrum analysis. Solution of stability problems.

ATMO.3080 Synoptic Meteorology (Formerly 85.308) - Credits: 3
Explores techniques of synoptic analysis including graphical subtraction, thickness analysis, isentropic analysis, streamlines and trajectories, divergence and vorticity. The use of a computer to perform these computations is explored through student projects.

ATMO.3090 Forecasting and Synoptic Techniques II (Formerly 85.309) - Credits: 3
Explores three-dimensional structure and dynamics of mid-latitude storm systems; capabilities and limitations of the barotropic model; quasi-geostrophic model; and operational primitive equation models. Some mesoscale phenomena are covered as time permits including coastal cyclogenesis, thermal lows, and sea-breeze circulations.

ATMO.3130 Physical Climatology (Formerly 85.313) - Credits: 3
Atmospheric processes determining the climate: solar and terrestrial radiation, elevation and thermal properties of surfaces, atmospheric circulations and eddy conduction between the atmosphere and land or sea surfaces, heat and water balance of earth’s surface and the atmosphere; hydrologic cycle; and climatic simulation models.

ATMO.3400 Tropical Meteorology (Formerly 85.340) - Credits: 3
An introduction to the tropical atmosphere including tropical climatology, structure and dynamics of easterly waves, tropical cyclones and monsoonal circulations.

ATMO.3500 Satellite and Radar Meteorology (Formerly 85.350) - Credits: 3
Explores theory and applications of radar, satellites, and lidar. Use of satellite imagery as a forecasting aide, theory and use of satellite profiling, and application of conventional and Doppler radar to severe weather and short term forecasting. Use of lidar and other profiling techniques to determine vertical temperature structure and turbulence.

ATMO.4030 Physical Meteorology (Formerly 85.403) - Credits: 3
Explores solar and terrestrial radiation processes and the heat balance of the atmosphere; fundamentals of radiation theory; radiative transfer processes in the atmosphere; atmospheric condensation processes; and nucleation theory and the growth of water drops and ice crystals by condensation, sublimation and accretion.

ATMO.4080 The Climate System (Formerly 85.408) - Credits: 3
The course covers the main elements of the climate system--the atmosphere, ocean, biosphere, solid earth, and cryosphere--and the primary source of energy, the sun. The elements are examined in terms of observed structure and important physical processes, the ways in which they interact, and how they can be modeled. The global energy budget is discussed and both natural and human-caused climate change are considered.

ATMO.4100 Advanced Forecasting (Formerly 85.410) - Credits: 3
Advanced analysis techniques and their use as forecasting tools are explored in both manual and computer formats. Techniques include moisture advection, moist isentropic trajectories, boundary layer destabilization, and other state-of-the-art techniques. Application of techniques to small and mesoscale phenomena.

ATMO.4120 Synoptic Weather Patterns (Formerly 85.412) - Credits: 3
This course is focused on applying meteorological theory to real weather patterns, with an emphasis on how the theory helps to understand the broad forcing mechanisms for each pattern as well as gaining an appreciation for the individual characteristics of each example. Topics will include nor’easters, back-door cold fronts, Alberta clippers, upper-air blocking,
snow squalls, and stationary fonts. Analysis techniques will use digital display software as well as manual analysis of plotted weather data. In addition to individual homework, some case studies will be examined in small groups.

**ATMO.4150 Atmospheric Dynamics (Formerly 85.415) - Credits: 3**

**ATMO.4160 Advanced Atmospheric Dynamics (Formerly 85.416) - Credits: 3**

**ATMO.4200 Introduction to Operational Numerical Weather Prediction (Formerly 85.420) - Credits: 3**

In this class, the student will learn the structure and science behind modern numerical weather prediction models and how to use them to solve real-world issues facing modern meteorological consultants. The student will learn how to operate and apply a modern numerical weather prediction model to study such issues as offshore wind farm siting, solar power prediction, and energy load forecasting. Students should be prepared to use Linux-based PC’s (supplied) to perform and submit projects.

**ATMO.4500 Satellite and Radar Meteorology (Formerly 85.450) - Credits: 3**

This course explores the theory behind the operation of radar, satellites, and lidar. It demonstrates the use of satellite imagery as a forecasting aid, and the application of conventional and Doppler radar to severe weather and short term forecasting. Additional topics include the techniques used to determine vertical profiles of temperature, moisture and turbulence using lidar and satellite data.

**ATMO.4710 Air Pollution (Formerly 85.471) - Credits: 3**

**ATMO.4840 Space Weather (Formerly 85.484) - Credits: 3**

Space Weather is an emerging field of space science focusing on understanding the conditions and processes on the sun, in the interplanetary space, and in the Earth's magnetosphere, ionosphere and thermosphere that can influence the performance and reliability of space-borne and ground-based technological systems and can endanger human life or health. This course is an introduction level course. It applies knowledge learned in Physics I and II in particular in electromagnetics to a real situation: space. The course introduces the present knowledge of space phenomena and the physical understanding of the plasma environment from the sun to the earth's ionosphere and in the heliosphere. Regions in space to be discussed include solar surface, solar wind, bow shock, magnetosheath, magnetosphere, magnetotail, radiation belts, ring currents, and ionosphere. Among space plasma physics theories, single particle theory, kinetic theory, and magnetohydrodynamics, which describe charged particle motion in electromagnetic fields and its consequences, are introduced and applied to space environment.

**ATMO.4870 Cloud Physics (Formerly 85.487) - Credits: 3**

The course considers the physical processes involved in the formation of clouds and precipitation, and the properties of clouds. Topics include the thermodynamics of dry and moist air, with emphasis on moist air saturation; atmospheric dynamics leading to instabilities, convection, and air mixing; the formation and growth of air droplets, ice crystals, clouds, and the initiation of precipitation.

**ATMO.4910 Directed Study (Formerly 85.491) - Credits: 1-3**

Students, through regular and frequent consultation with the instructor, undertake independent study of a particular area of meteorology.

**ATMO.4930 Internship: Atmospheric Science (Formerly 85.493) - Credits: 1-3**

Work experience with private or public employer. Written report and supervisor evaluation required.

**ATMO.4950 Honors Research: Atmospheric Science (Formerly 85.495) - Credits: 3**

An individual or team research project carried out by qualified students with the approval of and supervision by a faculty member.

**ATMO.4960 Practicum Experience in Meteorology**
A program of on-campus and/or off-campus experiences developed by the student in consultation with a faculty member and, when appropriate, a member of the staff of an off-campus firm. May be repeated up to a maximum of six credits. The practicum may not be substituted for a non elective course in the major.

**ATMO.4970 Research: Atmospheric Science - Credits: 3**

An independent scientific research project carried out by a qualified senior under the supervision of a faculty member.

**ENVI.1010 Environmental Science Seminar (Formerly 87.101) - Credits: 1**

A survey of the field of environmental science, curriculum options, and career opportunities. Presentations by members of the department and guest speakers. This course is intended primarily for students majoring in the various options of environmental science. It does not satisfy specific science requirements for majors in the Division of Science, nor does it qualify as a science with lab perspective.

**ENVI.1020 Environmental Problems Seminar (Formerly 87.102) - Credits: 1**

A survey of environmental problems and issues. Topics include air, water, and noise pollution; solid and liquid waste disposal; and the social, political, and economic implications of these issues. Readings, discussions, guest speakers, and field trips. This course is intended primarily for students majoring in the various options of environmental science. It does not satisfy specific science requirements for majors in the Division of Science.

**ENVI.1100 Global Environmental Studies - Credits: 3**

This course investigates how human activities impact the earth’s environment on a local, national, and global scale. Topics covered include the scientific method, population, fresh water resources, air and water pollution, climate change, energy, biodiversity, food security, solid waste management and sustainable living. Suitable as a Science elective for a degree in the College of Sciences.

**ENVI.1110 Sustainable Solutions for People and the Planet - Credits: 3**

This course explores some of the most challenging questions of our times: How can modern society thrive on a finite and changing planet? In what ways is our climate changing and what is causing those changes? How will human society be impacted: What could a transition to a sustainable, green, low-carbon economy consist of? We will explore these questions through a combination of simulations, serious games, and ‘systems thinking’ - building a skill set to think strategically about complex, dynamic problems. The course considers current events as they relate to climate change and sustainability and introduces students to real-world, interactive tools that allow them to explore scenarios and solutions for themselves.

**ENVI.1120L Global Environmental Studies Lab - Credits: 1**

This laboratory course will complement the material covered in the Global Environmental Studies Lecture. Topics include ecological footprints, nutrient cycling, water, and air quality, soil characteristics, ocean pollution, environmental justice, and climate change.

**ENVI.1150 Astronomy (Formerly 87.115) - Credits: 3**

Offers an introduction to the study of astronomy including historical development, instruments, solar system dynamics, planetary evolution, stellar systems and stellar evolution. Several field trips are included. This course satisfies the Gen Ed science requirement, but not specific science requirements for majors in the Division of Science.

**ENVI.1170L Astronomy Lab (Formerly 87.117) - Credits: 1**

Intended to develop a deeper understanding of astronomy through an exposure to the methods and materials used in astronomical analysis. Corequisite: 87.115 I,II(0,2)1

**ENVI.1200 Principles of Environmental Science - Credits: 3**

In this course, we will approach Environmental Science from an interdisciplinary viewpoint and use quantitative approaches to understand the physical, chemical, and biological environment and their interactions. A critical emphasis through this course will be on ecosystem services and how climate change, land use change, and pollution affect these. We will further review environmental law and policies and address concepts of sustainability and resource conservation.

**ENVI.1990L Envi. Science 1000 level elec. - Credits: 1**

Envi. Science 1000 level elec.

**ENVI.2010 Earth Systems: Geosphere (Formerly 87.201) - Credits: 3**
Earth Systems: Geosphere deals with the origin of the universe, solar systems and planet earth, the solid earth and processes at the earth’s surface, geological hazards, coastal processes, deep sea sediments and the climate record, and contamination of water and soil.

ENVI.2020 Earth Systems: Atmosphere and Oceans (Formerly 87.202) - Credits: 3

Earth Systems: Atmosphere and Oceans deals with the atmosphere, and oceans, as well as the important role they play within Earth’s vital systems. These interactions will address atmospheric structure, processes, and pollution. It will also address ocean-atmosphere exchange, ocean structure, processes, pollution, and coastal and deep sea sedimentation processes.

ENVI.2030L Earth Systems: Geosphere Laboratory (Formerly - Credits: 1)

The Laboratory component Earth Systems: Geosphere requires the student to make measurements, analyze and plot data, draw conclusions from the data plots, characterize and identify earth materials, and interpret geospatial representations. These skills will follow lecture material and increase understanding through active learning.

ENVI.2040L Earth Systems: Atmosphere and Oceans Laboratory (Formerly 87.204) - Credits: 1

Earth Systems: Atmosphere and Oceans Lab is designed to complement the lecture material from ENVI.2020 - Earth Systems Atmosphere and Oceans. This course, along with the other Earth Systems courses and corresponding labs use a systems-based approach for the topic of Earth and Environmental Science. This laboratory will concentrate on the Atmosphere and Oceanography.

ENVI.2050 Earth Systems: Biosphere and Global Change - Credits: 3

Earth Systems: Biosphere and Global Change explores the origin and evolution of life on Earth, its history, and how life has interacted with Earth systems throughout its history. Students will become familiar with the biomes of the world, ecological processes within those biomes, the biological communities that inhabit them, and how ecological processes lead to evolution over time. Throughout the course, we will examine how human society interacts with the biosphere, including how global change is both generated by and responds to the interaction.

ENVI.2070L Earth Systems: Biosphere and Global Change Lab - Credits: 1

This lab is designed to complement the lecture material from ENVI.2050 - Earth Systems: Biosphere and Global Change. This course, along with the other Earth Systems courses and corresponding labs use a systems-based approach for the topic of Earth and Environmental Science. This laboratory will concentrate of the Biosphere and Global Environmental Change.

ENVI.2990L Envi. Science 2000 Level Elective - Credits: 1

ENVI.3010 GIS in Earth and Environmental Sciences (Formerly 87.301) - Credits: 3

This course introduces earth and environmental science students to applications of geographic information systems, emphasizing hands-on field experience in collecting spatial location data and in mapping environmental data using GIS software. Covers fundamentals of: geodesy; spherical and plane coordinate systems; spatial data concepts, including error, accuracy, and precision; location measurement technologies including GPS: vector and raster GIS data structures and file types, basic GIS operations, including georeferencing of raster files and editing of vector files; assembly of field data over a base map; analysis of spatial relationships using GIS tools; symbology and methods of map presentation.

ENVI.4000 Senior Seminar in Environmental Sciences - Credits: 1

The Senior Seminar in Environmental Sciences includes speaker presentations by invited external and internal faculty, as well as student presentations. The class includes interdisciplinary topics in Atmospheric Sciences, Geosciences, and Environmental Sciences. The goals are to improve oral communication skills and expand knowledge of stat-of-the-art research approaches and research themes.

ENVI.4100 Soil Science - Credits: 3

This class provides a fundamental understanding of the formation, structure, and functioning of soils. Topics include soil formation and history, soil chemistry and physics, soil endangerment and protection, and distribution and characteristics of soils across the world.

ENVI.4120L Soil Science Laboratory - Credits: 1

This lab is designed to complement the lecture material from ENVI.4100 - Soil Science. The lab includes field and laboratory measurements of soil structure and soil physical and chemical characteristics. As the outermost layer of the Earth’s crust, soils are at the interface between earth, air, water, and life. Soils
provide important ecosystem services and are critical for the sustenance of humanity.

ENVI.4150 Biogeochemical cycles - Credits: 3
This class will explore the origins, transport, and transformations of elements in the global environment. We will use quantitative approaches to understand physical, chemical, and biological controls on elemental cycles. Many of these elements cycle between the geosphere, atmosphere, hydrosphere, and biosphere, and quantifying exchanges and fluxes between compartments is a critical component of understanding their distribution. We will also emphasize microbial processes that are critical in shaping biogeochemical cycles.

ENVI.4160 Climate Change: Science, Communication, and Solutions (Formerly 81.416/BIOL.4160) - Credits: 3
Like many of the 'grand challenges' currently facing society, climate change is a complex problem that cuts across academic disciplines, including the physical sciences, biology, engineering, economics, political sciences, and behavioral psychology. In this course, we integrate recent research from many of these disciplines to explore the scientific basis of climate change, its impacts on the natural world and human society, and societal responses to it. Through interactive simulations, class discussions, lectures, current scientific literature, and student-led projects (such as video production and dynamic modeling), the goal of this course is to empower students to come to their own decisions about how society can address the climate change challenge.

ENVI.4170L Climate Change: Science, Communication, and Solutions Lab - Credits: 1
This course is designed to integrate closely with the lecture course, Climate Change: Science, Communication, and Solutions. Students will use interactive simulations, build models, and create media projects that explore climate change and sustainability. Topics include the physical climate system and carbon cycle, human energy systems, and climate policy and economics.

ENVI.4930 Internship: Environmental Studies (Formerly 87.493) - Credits: 1-3
Work experience with private or public employer. Written report and supervisor evaluation required. Meets Core Curriculum Essential Learning Outcome for Applied &Integrative Learning (AIL) and Written &Oral Communication (WOC).

ENVI.4950 Honors Research: Environmental Studies (Formerly 87.495) - Credits: 3
An individual or team research project carried out by qualified students with the approval of and supervision by a faculty member. Meets Core Curriculum Essential Learning Outcome for Applied &Integrative Learning (AIL) and Written &Oral Communication (WOC).

ENVI.4960 Practicum (Formerly 87.496) - Credits: 1-3
A program of on-campus and/or off-campus experiences developed by the student in consultation with a faculty member from the Department and, when appropriate, a member of the staff of an off-campus firm. May be repeated to a maximum of six credits. The practicum may not be substituted for a required course in the major.

ENVI.4970 Research: Environmental Studies - Credits: 3
An independent scientific research project carried out by a qualified senior under the supervision of a faculty member.

GEOL.1010 General Geology (Formerly 89.101) - Credits: 3
Presents a study of the earth with emphasis on earth materials, earth structure (crustal and internal), earth history, and the development of life. Designed for the general student.

GEOL.1030L General Geology Laboratory (Formerly 89.103) - Credits: 1
Topics covered include rock and mineral identification; interpretation of topographic and geologic maps; earthquakes and rock deformation; ground water, streams, wind, and glaciers and the sculpting of the Earth’s surface; and natural hazards and their impacts to humans.

GEOL.1510 Earth and Life (Formerly 89.151) - Credits: 3
This course will trace the changes in both the Earth and a variety of organisms through an investigation of fossils, field sites, map interpretation, and basic earth science principles. The effects of physical change and geobiochemical processes on evolution will be stressed as will the effects of life on Earth. Students will gain an appreciation of the very special nature of the earth and its symbiont life forms when seen against the background of other planets.
GEOL.1530L Earth and Life Laboratory (Formerly 89.153) - Credits: 1
This laboratory will concentrate on the identification of fossils, discrimination of fossils from sedimentary structures, and interpretation of ancient environments from lithology, fossils, and maps. A field trip is required.

GEOL.1990L Geology Lab 1000 level elective - Credits: 1
Geology Lab 1000 level elective

GEOL.2150 Forensic Geology (Formerly 89.215) - Credits: 3
This course deals with the application of geological and related principles to the solution of various types of crimes. The course will explore the use of evidence (rocks and minerals, soils, geochemistry, etc.) to identify the source and hence the potential perpetrator of the crime. Meets Core Curriculum Essential Learning Outcome for Critical Thinking & Problem Solving (CTPS) and Quantitative Literacy (QL).

GEOL.2990L Geology Lab 2000 level elective - Credits: 1
Geology Lab 2000 level elective

GEOL.3010 Mineralogy and Crystallography (Formerly 89.301) - Credits: 3
This course will introduce the concepts of crystallography necessary to prepare the student to use the analytical equipment of Optical Mineralogy and X-ray Crystallography. It also contains topics on the physical properties and chemistry of minerals aimed at improving the student’s ability to identify mineral samples. A significant portion of the course will be devoted to an introduction to optical methods using oil immersion and thin section techniques.

GEOL.3030L Mineralogy And Crystallography Laboratory (Formerly 89.303) - Credits: 1
Techniques of crystallographic description. Megascopic and microscopic techniques of mineral identification.

GEOL.3040 Igneous & Metamorphic Petrology (Formerly 89.304) - Credits: 3
The origin and evolution of igneous and metamorphic rocks. Emphasis will be on physical and chemical processes, magma transport and crystallization, phase equilibria, development of metamorphic facies, open and closed system behavior, and the development of metamorphic fabric.

GEOL.3060L Igneous and Metamorphic Petrology Laboratory (Formerly 89.306) - Credits: 1
Identification and classification of igneous and metamorphic rocks. Emphasis is on thin section identification and use of rock textures and compositions as guides to petrogenesis.

GEOL.3070 Earth Materials I (Formerly 89.307) - Credits: 3
An introduction to the basic principles that control the arrangement of atoms in crystalline solids (minerals) and their physical and chemical properties. Topics include crystal chemistry, crystal symmetry, macroscopic mineral identification, and the use of polarizing light microscopy and X-ray diffraction to identify and characterize minerals.

GEOL.3080 Earth Materials II (Formerly 89.308) - Credits: 3
Origin and properties of igneous, metamorphic, and sedimentary rocks. The rock cycle is used as a unifying concept. The role of rock properties in environmental, economic, and engineering applications is considered.

GEOL.3090L Earth Materials I Laboratory (Formerly 89.309) - Credits: 1
Laboratory to accompany Earth Materials I lecture. Topics include crystal structures, crystal symmetry, hand-speciman identification of minerals, X-ray diffraction, and polarizing light microscopy.

GEOL.3100L Earth Materials II Lab (Formerly 89.310) - Credits: 1
Macroscopic and microscopic characterization and classification of rocks. Investigation of physical processes and spatial representation of rock and sediment distribution.

GEOL.3140 Hydrogeology (Formerly 89.314) - Credits: 3
This course investigates the science of water in a geologic setting with special emphasis on the distribution, movement, and chemistry of the water. The course will include the following topics: techniques for measuring elements in the hydrologic equation, accuracy of hydrologic measurement, statistical studies of floods, and study of groundwater for both...
steady-state and transient conditions.

GEOL.3150 Environmental Geochemistry (Formerly 89.315) - Credits: 3
Application of geochemical principles to environmental problems including air pollution and atmospheric processes, climate change, water chemistry and water-rock interactions, and the transport and dispersal of organic and inorganic pollutants. Meets Core Curriculum Essential Learning Outcome for Applied & Integrative Learning (AIL) and Written & Oral Communication (WOC).

GEOL.3160 Geomorphology (Formerly 89.316) - Credits: 3
A study of the physical and chemical processes at work on the earth’s surface which result in the formation and development of surface features. Emphasis is placed on the mechanics of erosion (water, wind, ice, and waves) and the morphology and spatial distribution of the resultant landforms.

GEOL.3170L Environmental Geochemistry Lab - Credits: 1
Application of geochemical principles to environmental problems including air pollution and atmospheric processes, climate change, water chemistry and water-rock interaction, and the transport and dispersal of organic and inorganic pollutants. Meets Core Curriculum Essential Learning Outcome for Applied & Integrative Learning (AIL) and Written & Oral Communication (WOC).

GEOL.3180L Geomorphology Laboratory (Formerly 89.318) - Credits: 1
Investigates landforms and surficial processes through an interpretation of maps and field work. Environmental applications of surficial processes are stressed.

GEOL.3190 Earth Surface Processes (Formerly 89.319) - Credits: 3
A study of the physical and chemical processes that create landforms on the Earth’s surface. Emphasis is placed on physical and chemical weathering, fluvial erosion, glacial processes, soil formation, mass movements, slope stability and tectonic geomorphology.

GEOL.3210L Earth Surface Processes Laboratory (Formerly 89.321) - Credits: 1
Hands-on investigation of landforms and surficial processes through interpretation and synthesis of maps, aerial photography and field data.

GEOL.3220 Structural Geology (Formerly 89.322) - Credits: 3
An analysis of crustal deformation through detailed study of geologic structures with emphasis upon the response of geologic materials to stress and strain. Field techniques, tectonic principles, and geometrical analysis are employed.

GEOL.3240L Structural Geology Laboratory (Formerly 89.324) - Credits: 1
A survey of the graphical techniques used to convert field measurement into the information needed in the construction of geologic maps, cross-sections, and crustal stress-strain histories.

GEOL.3250 Geology for Engineers (Formerly 89.325) - Credits: 3
This course will introduce basic geological principles with an emphasis on engineering applications. Topics covered include minerals and rocks and their properties, surface processes, earthquakes and rock deformation, dynamic processes that affect the earth’s surface, geological hazards and their mitigation, earth resources.

GEOL.3310 Earth History (Formerly 89.331) - Credits: 3
An introduction to the history of the Earth and its life over the last 4.6 billion years. Applications include geologic principles, earth material, depositional environments, stratigraphy, the geological timescale, plate tectonics, and evolutionary theory.

GEOL.3330L Earth History Laboratory (Formerly 89.333) - Credits: 1
This laboratory compliments Earth History lecture material. Exercises include stratigraphic methods, geologic maps and fossil identification.

GEOL.3400 Geology of North America - Credits: 2
This is a reading course that is paired with a summer field experience lab section (GEOL.3420L). This course will involve familiarization of the geology of a region in North America including, but not limited to State and National Parks, with a different regional focus each time the course is offered. Students will read and discuss papers on the region of geologic interest and will learn necessary skills (e.g., geologic mapping, sampling, geophysical methods, equipment use, safety, etc.).
Field experience is essential to geoscience education. This course will include a minimum of two weeks of intensive field work including note taking, mapping, analysis of geologic history and structures, geologic illustration, and report writing. Completion of this course will create a skill set that will be very beneficial to the geology professional. Additional fees may be required to cover transportation and lodging.

**GEOL.3520 Sedimentation And Stratigraphy**  
(Formerly 89.352) - Credits: 3

Principles and processes of sedimentation: erosion, mechanics of transport, diagenesis and lithification, models for sedimentary environments. Development of the stratigraphic record, relative and absolute time, and seismic stratigraphy.

**GEOL.3540L Sedimentation And Stratigraphy Laboratory**  
(Formerly 89.354) - Credits: 1

Determination of mass properties of sediments with emphasis on mechanical and statistical analysis, identification and description of sedimentary rocks, facies models and stratigraphic cross-sections.

**GEOL.4100 Geology of New England** - Credits: 3

New England has an ancient and diverse geologic history. This course covers the tectonic and sedimentary processes that formed the bedrock of New England and New York, the Pleistocene history of ice sheet erosion and deposition and the most recent period of human interactions with the landscape.

**GEOL.4130 Exploring the Solar System** - Credits: 3

We live in a remarkable era of robotic space exploration. In this course, we will walk through the formation of the Solar System and the comparative evolutions of the planets, moons, and other objects from a geological perspective, with special attention paid to the latest research and missions. We will also consider the prospects for life on other planetary bodies in our Solar System and in extrasolar planetary systems.

**GEOL.4560 Applied Geophysics**  
(Formerly 89.456) - Credits: 3

Application of geophysics to problems in geology and environmental science. Principles and techniques of gravity, magnetic, electrical, and seismic methods. Field projects and surveys.

**GEOL.4910 Directed Study: Geoscience**  
(Formerly 89.491) - Credits: 1-3

The student, through regular and frequent consultation with the instructor, undertakes independent study of a particular area of the geosciences.

**GEOL.4930 Internship: Environmental Geoscience**  
(Formerly 89.493) - Credits: 1-3

Work experience with private or public employer. Written report and supervisor evaluation required. Meets Core Curriculum Essential Learning Outcome for Applied & Integrative Learning (AIL) and Written & Oral Communication (WOC).

**GEOL.4950 Honors Research: Geoscience**  
(Formerly 89.495) - Credits: 3

An independent scientific research project carried out by a qualified senior under the supervision of a faculty member. Meets Core Curriculum Essential Learning Outcome for Applied & Integrative Learning (AIL) and Written & Oral Communication (WOC).

**GEOL.4970 Research: Geoscience** - Credits: 3

An independent scientific research project carried out by a qualified senior under the supervision of a faculty member.
MATH.1020 Freshman Seminar in Mathematics
(Formerly 92.102) - Credits: 1
This course is designed to orient undergraduate math majors to
the university and to their chosen field. Students will learn
about the mathematics program, the mathematics faculty and
their research interests, careers in math-related areas,
internship opportunities, and university resources.

MATH.1070 Elementary Math for Teaching: Numbers
and Operations (Formerly 92.107) - Credits: 3
The Number and Operations course for elementary and middle
school teachers examines the three main categories in the
Number and Operations strand of Principles and Standards of
School Mathematics (NCTM) -- Understanding numbers,
representations, relationships, and number systems; the
meanings of operations and relationships among those
operations; and reasonable estimation and fluent computation.
No credit in Science or Engineering.

MATH.1080 Elementary Math for Teaching: Algebra
and Data Analysis - Credits: 3
This course seeks to support students in furthering their
understanding of elementary mathematics concepts. The goal is
for students to not only pass the MTEL for elementary
mathematics, but to lay the groundwork for graduate work in
elementary mathematics education. Specifically, we use an
integrated approach to algebra that draws on real-world data
to the extent possible. To this end, learners will gain experience
in selecting and developing a number of data representations,
organizing data, looking for patterns in the data and, finally,
using words, symbolic notation, graphs and tables to generalize
those patterns. No credit in Science or Engineering.

MATH.1110 Quantitative Reasoning (Formerly 92.111)
- Credits: 3
An introduction to the mathematics concepts and skills
important in modern society, even for non-technical pursuits.
The course will emphasize conceptual understanding as well as
a facility in performing elementary computations. Topics to be
examined will include types of reasoning, problem-solving
methods, techniques of estimation, algebraic essentials, and the
nature of probability and statistics. No credit in Science or
Engineering.

MATH.1110SI SI for Quantitative Reasoning &
Introduction to Statistics (Formerly
92.111SI/92.2830SI) - Credits: 2
This course provides supplemental instruction in mathematics
to students whose Elementary Algebra Accuplacer exam scores
indicate the need for such instruction. The credits in this course
can not be used to satisfy the credits required for graduation,
but may be used to satisfy the credits required for full time
student status.

MATH.1115 Fundamentals of Algebra (Formerly
90.111) - Credits: 3
Intended for students with little or no background in basic
algebra or whose background is not current. Topics covered
include: the real number system, factoring fractions, linear
equations, functions, graphs, systems of equations, and the
quadratic equation. Students will not receive credit for this
course toward any degree program at the University of
Massachusetts Lowell.

MATH.1210 Management Precalculus (Formerly
92.121) - Credits: 3
Review of algebra. The Real Numbers, inequalities and
intervals on the number line, factoring, radical notation,
properties of exponents, scientific notation, and operations on
rational expressions. Function definition and graph of
linear/nonlinear functions such as quadratic, cubic, absolute
value, piecewise-defined, rational, and power function.
Additional topics with functions included such as
transformations of graphs and symmetry, composite functions,
one-to-one and inverse functions. Solving linear and quadratic
equations algebraically and graphically. Solving systems of
equations in two variables algebraically and graphically.
Modeling systems of equations in three variables and solving
them analytically and with matrices using TI-84
implementation. Modeling with linear as well as quadratic and
power functions with the aid of a graphing calculator and
Excel spread sheets. Business applications are included.

MATH.1210SI Management Pre-Calculus
Supplemental Instruction (Formerly 92.121SI) -
Credits: 1
Taken simultaneously with MATH.1210, this 1-credit course
offers students taking MATH.1210 supplemental instructions
to foster a greater opportunity for successful completion of
Management Precalculus. The course credit cannot be used to
satisfy the credits required for graduation, but may be used to
satisfy credits required for full time student status.

MATH.1220 Management Calculus (Formerly 92.122)
- Credits: 3
Review of difference quotient, least squares modeling, limit of
difference quotient, differential calculus: derivatives,
differentials, higher-order derivatives, implicit differentiation,
relative and absolute maxima and minima of functions, and applications of derivatives to business and economics. Integrals and applications to business. No credit in Science or Engineering.

MATH.1220SI Management Calculus Supplemental Instruction (Formerly 92.122SI) - Credits: 1

Taken simultaneously with MATH.1220, this 1-credit course offers students taking MATH.1220 supplemental instructions to foster a greater opportunity for successful completion of Management Calculus. The course credit cannot be used to satisfy the credits required for graduation, but may be used to satisfy credits required for full time student status.

MATH.1230 Precalculus Mathematics II (Formerly 92.123) - Credits: 3

Reviews angles and their measure, the trigonometric functions, solving triangles, law of sines, law of cosines, circular functions and their graphs, vectors and trigonometric identities. No credit in Science or Engineering.

MATH.1270 Preparation for Calculus (Formerly 92.127) - Credits: 4

A review of precalculus (algebra and trigonometry) together with development of problem solving skills. No credit in Science or Engineering.

MATH.1280 Calculus IA (Formerly 92.128) - Credits: 4

Provides a review of pre-calculus algebra and trigonometry integrated with the first half of Calculus I: limits, continuity, derivatives, basic derivative formulas, chain rule, implicit differentiation. Students are expected to have taken pre-calculus and trigonometry in order to be successful in this course.

MATH.1280SI Calculus IA Supplemental Instruction (Formerly 92.128SI) - Credits: 1

Taken simultaneously with MATH.1280, this 1-credit course offers students retaking MATH.1280 supplemental instructions to foster a greater opportunity for successful completion of Calculus IA. The course credit cannot be used to satisfy the credits required for graduation, but may be used to satisfy credits required for full time student status.

MATH.1290 Calculus IB (Formerly 92.129) - Credits: 4

Provides a review of pre-calculus, algebra and trigonometry integrated with the second half of Calculus I. Inverse trig functions and their derivative, logarithmic functions and their derivative, related rates, L’Hospital’s Rule, optimization problems, curve sketching, linearization, Newton’s Method, hyperbolic functions and their derivative, antiderivatives. Completion of this course is equivalent to MATH.1310 Calculus I.

MATH.1290SI Calculus IB Supplemental Instruction (Formerly 92.129SI) - Credits: 1

Taken simultaneously with MATH.1290, this 1-credit course offers students retaking MATH.1290 supplemental instructions to foster a greater opportunity for successful completion of Calculus IA. The course credit cannot be used to satisfy the credits required for graduation, but may be used to satisfy credits required for full time student status.

MATH.1310 Calculus I (Formerly 92.131) - Credits: 4

Serves as a first course in calculus. Functions, limits, continuity, derivatives, rules for differentiation of algebraic and transcendental function; chain rule, implicit differentiation, related rate problems, linearization, applied optimization, and curve sketching. Introduction to area and integration. Students are expected to have taken pre-calculus and trigonometry in order to be successful in this course.

MATH.1320 Calculus II (Formerly 92.132) - Credits: 4

Serves as a continuation of Calculus I. Integration and techniques of integration including the substitution method, integration by parts, trigonometric integrals, trigonometric substitution, integration of rational functions by partial fractions, numerical integration, and improper integrals. Volumes using cross-sections, the disk method, the washer method and the shell method. Arc length and surface area. Infinite series, power series, Maclaurin and Taylor series. Polar coordinates and areas and lengths in polar coordinates.

MATH.1380 Calculus for the Life Sciences I (Formerly 92.138) - Credits: 4

This is a single variable calculus course with applications to the life sciences. Review of basic algebra, trigonometry, functions and graphs. Limits and derivatives, including differentiation rules, curve sketching and optimization problems. Implicit differentiation. Study of exponential and logarithmic functions motivated by growth, decay and logistic modes. Introduction to integration, techniques, applications and the fundamental theorem.

MATH.1390 Calculus for the Life Sciences II (Formerly 92.139) - Credits: 4

MATH.1410 Honors Calculus I (Formerly 92.141) - Credits: 4
This course covers the same topics as MATH.1310 Calculus I, but in an enriched environment.

MATH.1420 Honors Calculus II (Formerly 92.142) - Credits: 4
This course covers the same topics as MATH.1320 Calculus II, but in an enriched environment.

MATH.1510 Explorations in Mathematics (Formerly 92.151) - Credits: 3
This course is not so much about the mathematics of formulas, equations, rules and errors, as about mathematics that can be experienced: counted, drawn, seen, created; quite simply: played with. Officially, we will encounter concepts of combinatorics, geometry, number theory and Boolean logic. Unofficially, we will experiment with puzzles and patterns and develop as much mathematics from them as we can. Prerequisites: high school mathematics and willingness to explore. No credit in science or engineering. This course satisfies the Quantitative Reasoning requirement.

MATH.2100 Functions and Modeling (Formerly 92.210) - Credits: 3
Engage in lab-based activities designed to strengthen their problem-solving skills and expand knowledge of the topics in secondary mathematics, focusing especially on topics from precalculus and the transition to calculus. Explore a variety of contexts that can be modeled using families of functions. Topics include conic sections, parametric equations and polar equations. Multiple representations, transformations, data analysis techniques and interconnections among geometry, probability and algebra. Quantitative approaches and building relationships between discrete and continuous reasoning will be recurrent themes.

MATH.2190 Discrete Structures I (Formerly 92.321 and MATH.3210) - Credits: 3
Presents propositional logic, combinatorics, methods of proof, mathematical systems, algebra of sets, matrix algebra, relations and functions, recursion and generating functions, applications to computer science, and graph theory.

MATH.2210 Linear Algebra I (Formerly 92.221) - Credits: 3
Elementary set theory and solution sets of systems of linear equations. An introduction to proofs and the axiomatic methods through a study of the vector space axioms. Linear analytic geometry. Linear dependence and independence, subspaces, basis. Inner products. Matrix algebra. Applications of the above will also be discussed.

MATH.2220 Linear Algebra II (Formerly 92.222) - Credits: 3
Linear transformations. Linear operators, change of basis, inner product and the diagonalization problem. Quadratic forms. Convex sets and geometric programming, input/output models for an economy, Markov chains, other applications of linear algebra.

MATH.2270 Elementary Math for Teaching: Geometry and Measurement (Formerly 92.227) - Credits: 3
This is a mathematics content course which covers the geometry/measurement strands of the Massachusetts Curriculum Frameworks in Mathematics at a collegiate level. The goal is not only to prepare students for the elementary mathematics MTEL, but to lay the groundwork for graduate work in elementary mathematics education. The course centers around "Big Ideas" such as Equivalence, Proportionality, Transformations; and Shapes & Solids. No credit in Science or Engineering.

MATH.2310 Calculus III (Formerly 92.231) - Credits: 4
Extends the concepts of Calculus I and II that deal with functions of a single variable to multi-variable functions, vector-valued functions and vector fields. Vectors and vector-valued functions, the dot and cross products, curves in space and the calculus of vector-valued functions. Multi-variable functions, limits, continuity, and differentiation. Partial derivatives, directional derivatives, the gradient, Lagrange multipliers and optimization. Double and triple integrals in Cartesian, polar and spherical coordinates. Vector fields and the fundamental theorems of vector calculus developed, line and surface integrals, Green’s theorem, Stokes’s theorem, and
the divergence theorem.

MATH.2320L Math Lab I (Formerly 92.232) - Credits: 1

An introduction to mathematics related software. Topics from Calculus & Differential Equations will be explored using a symbolic package like Maple. The course will also introduce LaTeX, the standard for typesetting mathematics.

MATH.2340 Differential Equations (Formerly 92.234) - Credits: 3

MATH.2360 Engineering Differential Equations (Formerly 92.236) - Credits: 3

Introduction to differential equations with an emphasis on engineering applications. Topics include first-order equations, higher-order linear equations with constant coefficients, and systems of first-order equations. Applications of each topic are introduced and qualitative, analytical, and numerical solution techniques are studied. Laplace transform methods are discussed. The software package MATLAB is used throughout the course for both analytical and numerical calculations.

MATH.2410 Honors Calculus III (Formerly 92.241) - Credits: 4

Covers the same topics as MATH.2310 Calculus II, but in an enriched environment.

MATH.2440 Honors Differential Equations (Formerly 92.244) - Credits: 3

Introduction to differential equations. Topics include first-order equations, second-order and higher-order linear equations, systems of first-order linear equations with constant coefficients, and Laplace transforms.

MATH.2720 Introduction to Programming with MATLAB (Formerly 92.272) - Credits: 3

This course will introduce basic programming concepts using MATLAB as the programming environment. Topics include an introduction to MATLAB, array manipulation, graphics, script files, data input and output, relational and logical operators, conditional statements, loops, and iterative procedures. Additional topics will be discussed as time permits. Additional topics will be chosen from the following: finding roots of nonlinear equations, random number generation, Markov processes, simple statistics, interpolation, and the basics of Fourier analysis.

MATH.2830 Introduction to Statistics (Formerly 92.283) - Credits: 3

An introduction to descriptive statistics, graphing and data analysis, probability laws, discrete and continuous probability distributions, correlation and regression, inferential statistics. No credit in Sciences (except Biology and EEAS) or Engineering. Meets Core Curriculum Essential Learning Outcome for Quantitative Literacy (QL).

MATH.2830SI SI for Quantitative Reasoning & Introduction to Statistics (Formerly 92.111SI/92.2830SI) - Credits: 2

This course provides supplemental instruction in mathematics to students whose Elementary Algebra Accuplacer exam scores indicate the need for such instruction. The credits in this course can not be used to satisfy the credits required for graduation, but may be used to satisfy the credits required for full time student status.

MATH.3010 Introduction to Applied Mathematics I (Formerly 92.301) - Credits: 3

Discusses vector analysis, Green’s Theorem, Divergence Theorem, Stokes’ Theorem, Fourier series, integrals, and partial differential equations of physics and engineering.

MATH.3020 Introduction to Applied Mathematics II (Formerly 92.302) - Credits: 3

MATH.3220 Discrete Structures II (Formerly 92.322) - Credits: 3

Examines graph theory, trees, algebraic systems, Boolean algebra, groups, monoids, automata, machines, rings and fields, applications to coding theory, logic design, and sorting.
This course will focus on reading and writing mathematics. Students will learn how to analyze and interpret mathematical statements and understand the reasoning behind these statements. They will also learn how to convey mathematical ideas and write proofs using precise language, correct logic, and other important elements.

**MATH.3300 Symbolic Logic (Formerly 92.330)** - Credits: 3

An introduction to symbolic logic. Symbolic logic provides a framework of formal reasoning with applications in mathematics, cognitive science, computer science and philosophy. Topics include propositional logic, boolean algebras and rings, first-order logic and systems of deduction. Time permitting, we will touch on Tarski’s notion of model, and the completeness and incompleteness theorems of Godel.

**MATH.3600 Mathematic Structure for Computer Engineers (Formerly 92.360)** - Credits: 3

**MATH.3620 Numerical Analysis I (Formerly 92.362)** - Credits: 3

Focuses on the theory and application of numerical techniques including error analysis. Also discusses solution of linear, nonlinear and differential equations, interpolation, numerical integration, and curve fitting. Computer solutions are emphasized.

**MATH.3630 Intro to Data Analysis (Formerly 92.363)** - Credits: 3

Computer analysis of data derived from research conducted in physical, social, and life sciences. Data preparation. Data modification, file manipulation, and descriptive statistics using SPSS. Programming ability is not required. No credit in Science or Engineering.

**MATH.3750 Senior Seminar I (Formerly 92.375)** - Credits: 1

Student works with an advisor to develop a proposal for a senior project that will be carried out as part of MATH.4750 Senior Seminar II. Generally taken during the spring of the junior year. Prerequisite: Permission of instructor.

**MATH.3810 Mathematical Physics (Formerly 92.381)** - Credits: 3

Intended for students having completed 2 full years of physics and math, this course is designed to develop competency in the applied mathematical skills required of junior and senior level physics majors. Covering topics involving infinite series, power series, complex numbers, and linear algebra along with vector and Fourier analysis, students will be trained with the rigor required to solve a wide range of applications in the physical sciences. Physics majors only.

**MATH.3850 Applied Statistics (Formerly 92.385)** - Credits: 3

Introduction to experimental design, data analysis and formal statistical procedures from an applied point of view.

**MATH.3860 Probability and Statistics I (Formerly 92.386)** - Credits: 3

Provides a one-semester course in probability and statistics with applications in the engineering sciences. Probability of events, discrete and continuous random variables cumulative distribution, moment generatory functions, chi-square distribution, density functions, distributions. Introduction to estimation, hypothesis testing, regression and correlation. No credit for both MATH.3860 and MATH.4070, Math majors should take MATH.4070.

**MATH.4030 Mathematical Analysis (Formerly 92.403)** - Credits: 3

The real numbers, completeness, sequences of real numbers, functions, continuity, uniform continuity, differentiability, the Riemann integral, series or real numbers, sequences and series of functions, uniform convergence, power series.

**MATH.4070 Probability and Mathematical Statistics I (Formerly 92.407)** - Credits: 3

Addresses the topics of probability, random variables, discrete and continuous densities, expectation and variance, special distributions (binomial, Poisson, normal, etc.), moment generating functions, joint and conditional distributions, transformations of variables, sampling, and the central limit theorem.

**MATH.4100 Computers and Calculators in the Classroom (Formerly 92.410)** - Credits: 3

This course explores the roles of mainframes, PC’s and hand calculators in instruction, examine some of the available
software and consider their use in a variety of areas of secondary mathematics, such as algebra, geometry (Euclidean and analytic), probability and statistics and introductory calculus. No credit in Science or Engineering.

MATH.4110 Complex Variables I (Formerly 92.411/511) - Credits: 3

A first course in theory of analytic functions of one complex variable: complex differentiability and the Cauchy-Riemann equations, Cauchy Integral Theorem and Cauchy Integral Formula, Taylor and Laurent series, zeroes of analytic functions and uniqueness, the maximum modulus principle, isolated singularities and residues. Applications.

MATH.4130 Number Theory (Formerly 92.413) - Credits: 3

Studies congruencies and the Chinese Remainder Theorem, Primitive roots, quadratic reciprocity, approximation properties of continued fractions, Pell's equation. Recent application of number theory such as primality testing, cryptology, and random number generation will also be covered.

MATH.4190 Mathematica - Credits: 3

A project -based course starting with an introduction to the basic features of Mathematica. A project that allows the student to focus on certain features in more detail is required and occupies the second half of the course.

MATH.4200 Mathematical Problem Solving (Formerly 92.420/520) - Credits: 3

Focuses on: mathematical resources, ability to use heuristics, the student’s beliefs about the use of mathematics to solve problems, and the student’s self-confidence as a problem solver. Effective strategies for incorporating problem solving in the curriculum will also be discussed.

MATH.4210 Abstract Algebra I (Formerly 92.421/521) - Credits: 3

Elementary group theory, groups, cosets, normal subgroups, quotient groups, isomorphisms, homomorphisms, applications.

MATH.4270 Geometry (Formerly 92.427/527) - Credits: 3

This course is designed for current and prospective geometry teachers. In addition to the development of Euclidean geometry, students will become familiar with geometry applications in Geometer's Sketchpad software, and to a lesser degree with other geometry software applications including Geogebra, and Cabri. There will be an introduction to spherical and hyperbolic geometry and triangle measurements will be computed for each. Calculus based derivations of area and volume for surfaces and solids will be generated and related to Euclidean geometry topics.

MATH.4350 History of Mathematics (Formerly 92.435/535) - Credits: 3

Examines ancient numeral systems, Babylonian and Egyptian mathematics, Pythagorean mathematics, duplication, trisection, and quadrature, Euclid’s elements and Greek mathematics after Euclid, Hindu and Arabian mathematics, European mathematics from 500 to 1600, origins of modern mathematics, analytic geometry, the history of calculus. Also covers the transition to the twentieth century and contemporary perspectives.

MATH.4450 Partial Differential Equations (Formerly 92.445) - Credits: 3

MATH.4480 Mathematics of Signal Processing (Formerly 92.448) - Credits: 3

MATH.4500 Mathematical Modeling (Formerly 92.450) - Credits: 3

Applications of mathematics to real life problems. Topics include dimensional analysis, population dynamics wave and heat propagation, traffic flow.

MATH.4540 Computational Mathematics (Last Term 2009 Spring)(Formerly 92.454) - Credits: 3

This course serves as an introduction to the theory and applications of numerical techniques. The course emphasizes an understanding of why numerical methods work and their limitations. Topics include Taylor series, interpolation, curve
fitting, numerical differentiation and integration, numerical solution of systems of equations, and numerical solution of boundary value problems. Scientific programming languages are used to illustrate numerical computations.

MATH.4660 Stat Program Using SAS (Formerly 92.466) - Credits: 3

An introduction to creation and manipulation of databases and statistical analysis using SAS software. SAS is widely used in the pharmaceutical industry, medical research and other areas. Cannot be used as a Math Elective.

MATH.4750 Senior Seminar II (Formerly 92.475) - Credits: 3

Undergraduate seminar on advanced mathematical topics. Students are required to develop an understanding of an advanced subject beyond the scope of an existing course or synthesize two or more different areas form their curriculum. Students are required to participate in the seminar, present their results to the Department and write a substantial thesis in their topic area. Essential course elements include library research, original research, and both verbal and written exposition. The first semester is a graduation requirement for majors in mathematics.

MATH.4760 Senior Seminar III (Formerly 92.476) - Credits: 3

An optional second semester seminar to allow for continuation of study initiated in Senior Seminar I.

MATH.4860 Probability and Math Statistics II (Formerly 92.486) - Credits: 3

MATH.4900 Selected Topics (Formerly 92.490) - Credits: 1-3

Individual study for the student desiring more advanced or more specialized work in algebra. May be repeated for a total of six semester credits. Course may not be substituted for scheduled offerings.

MATH.4940 Directed Study in Statistics (Formerly 92.494) - Credits: 3

Individual study for the student desiring more advanced or more specialized work in Statistics. May be repeated for a total of six semester credits. Course may not be substituted for scheduled offerings. Prerequisite: Permission of Department Chair.

MATH.4960 Mathematics Practicum (Formerly 92.496) - Credits: 1-3

Unpaid internship in the Department of Mathematical Sciences. This allows students to receive up to 3 (free elective) credits while working on an approved project. Students who have a position and who wish to take advantage of this Practicum should see the department Internship Coordinator.
Physics & Applied Physics Department

Mission Statement

Establishing the foundation of physical insight for emerging technologies in every student, the Department of Physics engages bachelor’s, masters and doctoral level students in state-of-the-art research and academic curriculum in preparation for professional careers in science.

Overview/Description

The University of Massachusetts Lowell physics program is designed to introduce the student to both fundamental and applied aspects of physics leading to a wide range of career options after graduation. Some of our graduates seek employment after receiving the Baccalaureate degree, while others continue on to graduate study aiming for a research career. The employer for a present-day physics graduate may be an educational institution, a small business, an industrial firm, a government laboratory or a non-profit research center.

Physics majors at the University of Massachusetts Lowell have the opportunity to become involved and discover first-hand what scientific research is all about. Research projects can be undertaken both during the regular academic year, as well as during the summer months and other semester breaks. In most cases, the student earns a stipend during the process, and benefit from working with physics faculty who are regularly engaged in a variety of research programs in subatomic physics, astrophysics, nanoscience, photonics, terahertz technology, radiological and medical physics.

Upon entering the program, incoming students are assigned a faculty advisor, who guides the student throughout his or her undergraduate career at the University. The advisor is available at any time to discuss the academic concerns of the student, and helps the student plan a program of study. Available programs of study include the Standard program and Radiological Health Physics option, as well as programs meant to prepare the student for graduate studies or a teaching career.

For additional information, visit the Department of Physics & Applied Physics website.

Majors

The Department of Physics & Applied Physics offers a Bachelor of Science degree with a major in Physics and a Bachelor of Science degree with a major in Engineering Physics.

PHYSICS MAJOR

The major has three options:

- General Option
- Astronomy and Astrophysics Option
- Radiological Health Physics Option

General Option

The General option provides students with a launching pad for a wide range of career choices, from academic appointments in universities to technical positions in industry, from research in national laboratories to science policy in government. It superimposes technical elective courses chosen by the student and his/her academic advisor on a general physics foundation of the kernel courses. The special non-physics electives may be in any of the engineering fields, computer science, mathematics, biology or chemistry. Students pursuing this course of study develop a broad and solid grounding in physics (with 60 credits of physics coursework required for graduation), and concurrently acquire a background in related scientific disciplines. Research opportunities in many subfields of physics provide students with the necessary training to either pursue graduate studies to explore deeper into the world of physics or branch out into interdisciplinary fields as their passion leads them.

Astronomy and Astrophysics Option

Astronomy and Astrophysics focuses on studies of celestial objects and phenomena beyond our planet earth, using techniques of observational astronomy, computational modeling, rocket-launched instruments and satellite observations. This option will prepare students specifically interested in pursuing careers in this field. Specialty courses include optical system design, scientific computing, computerized data-acquisition, image processing and statistical data analysis. Currently, there are 8 courses relevant to the Astronomy and Astrophysics option. Students interested in this option will take 4 of those courses as physics electives as part of the Physics degree requirements, and be able to take cross-disciplinary special electives in earth and atmospheric sciences, computer science, math, chemistry and engineering.

Radiological Health Physics Option

Radiological Health Physics involves the study of the effects of radiation and radioactivity on life processes. It also can be called radiation protection science and is particularly involved with the effects of radiation on the human body and the control of such radiation. A graduate of this curriculum would enter the profession of health physics, which is devoted to the protection of man and the environment from the harmful effects of radiation, while at the same time making it possible for our advancing civilization to enjoy all of the benefits resulting from uses of radiation.

View all the complete Degree Pathways
ENGINEERING PHYSICS MAJOR

The Engineering Physics degree is designed for students whose interests and career objectives span both physics and engineering. It is aimed at filling an increasing need of a nimble workforce trained for success in the technological world of today, where the traditional disciplinary lines between science and engineering are being continually blurred. It prepares students for professional careers where advanced rigorous math skills, experience in computer modeling, a high level of critical and independent thinking and familiarity with engineering principles are required, including the research and development in emerging technologies.

The major has two options:

- **Mechanical Engineering Option**
- **Electrical and Computer Engineering Option**

**Mechanical Engineering Option**

The Mechanical Engineering option includes about a quarter of the required courses and two-thirds of the elective courses to be from Mechanical Engineering, in addition to core, math and chemistry courses common to both Physics and Engineering Physics degree pathways. These include Statics, Strength of Materials, Materials Science for Engineers, Fluid Mechanics and Heat Transfer. The option provides the flexibility to continue on to graduate degrees in either Mechanical Engineering or Physics.

**Electrical and Computer Engineering Option**

The Electrical and Computer Engineering option includes about a quarter of the required courses and two-thirds of the elective courses to be from Electrical and Computer Engineering, in addition to core, math and chemistry courses common to both Physics and Engineering Physics degree pathways. These include Application Programming, two semesters of Circuit Theory and basic Circuits Labs, and Logic Design. The option provides the flexibility to continue on to graduate degrees in either Electrical and Computer Engineering or Physics.

View all the complete Degree Pathways
(https://www.uml.edu/Sciences/physics/Programs-of-Study/Physics-major.aspx).

**Minor**

The Department of Physics & Applied Physics offers a minor in Physics.

A student who has a basic background in physics and mathematics may be able to take more advanced physics courses. The goal of the Physics minor program is to provide recognition for students in other majors who wish to enhance their understanding and mastery of a broader range of subjects than is provided in their major field alone.

The Physics minor will establish the physics background needed to enter interdisciplinary fields such as biophysics, medical physics, or material science. In addition, Physics minor would be especially useful for students majoring in Biology, Chemistry, Mathematics, Earth Sciences, Engineering or Computer Science.

A minor in Physics consists of 21 credits. All course prerequisites and co-requisites must be satisfied.

**Required Courses**

- **PHYS.1410**
- **PHYS.1610**
- **PHYS.1410L**
- **PHYS.1610L**
Physics I Lab / Honors Physics I Lab

PHYS.1440

Physics II / Honors Physics II

PHYS.1440L

Physics II Lab / Honors Physics II Lab

PHYS.2450

Physical Properties of Matter / Honors Physics III

PHYS.2450L

Choose one from the following:

PHYS.2610L

Physics of Materials & Devices

PHYS.2620L

Principles in Laboratory Automation

PHYS.2100

Intro to Modern Physics

6 credits of Physics Elective at the 3000 level or above

For more information, contact the Department of Physics & Applied Physics.

### Total Minimum Credits = 120

Consult the General Education website for General Education requirements. See your Faculty Advisor to determine which courses you should take to fulfill the Gen. Ed. Diversity (D) and Ethics (E) requirements.

1. Number of specified physics credits.
2. May substitute HSCI.1010 & HSCI.1040 Human Anatomy & Physiology I & II (8 credits for 5).

**Restriction on off-campus study:**

Be advised that any course taken at another institution must be formally approved prior to enrollment. See the catalog policy.
for details.

*Last Updated: 10/17/2017*

### Suggested Degree Pathway for Physics - Photonics Option

For students who entered Fall 2013 to Spring 2015.

**Note:** no more students are being accepted into this option as of fall 2016.

Total Minimum Credits = 120

1Number of specified physics credits.

2Must be an elective from outside the Physics Dept.

3The Core Curriculum Essential Learning Outcomes for Diversity and Cultural Awareness (DCA) and Social Responsibility and Ethics (SRE) are fulfilled outside this major. See the DCA course listing and the SRE course listing for a full list of classes that fulfill these requirements.

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the CoreCurriculum policy for further details. You should meet with your faculty advisor to determine how you will meet the Core Curriculum requirements.

Current UMass Lowell students should use their Advisement Report in SiS. If you need assistance, please contact your adviser.

Restriction on off-campus study:

Be advised that any course taken at another institution must be formally approved prior to enrollment. See the catalog policy for details.

2The Core Curriculum Essential Learning Outcomes for Diversity and Cultural Awareness (DCA) and Social Responsibility and Ethics (SRE) are fulfilled outside this major. See the DCA course listing and the SRE course listing for a full list of classes that fulfill these requirements.

3Choose from the following:

- PHYS.4240
  Environmental Health Physics
- PHYS.4410
  Radiochemistry
- RADI.5750
  Certification Preparation in Radiological Sciences

No more than two Breadth of Knowledge courses can be taken with the same prefix. The Core Curriculum courses may be taken in any sequence. Refer to the Core Curriculum policy for further details. You should meet with your faculty advisor to determine how you will meet the Core Curriculum requirements.

Current UMass Lowell students should use their Advisement Report in SiS. If you need assistance, please contact your adviser.

**Restriction on off-campus study:**

Be advised that any course taken at another institution must be
formally approved (https://www.uml.edu/docs/offcampus_courses_tcm18-274376.pdf) prior to enrollment. See the catalog policy (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) for details.

</tbody>
</table>

### Total Minimum Credits = 120

1. Number of specified physics credits.

2. Special Electives:
   - Special Electives must be courses from outside the Physics Department.
   - Courses below the lowest-level required course in the Physics major cannot be used as Special Electives. For example, no MATH course below Calculus I is acceptable.
   - Any combination of 10 credits that meets the above two conditions is acceptable.

3. The Arts and Humanities (AH) and Social Sciences (SS) perspectives are subsets of the Breadth of Knowledge (BoK) requirements in the Core Curriculum (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf). No more than two BoK courses can be taken with the same prefix.

The Core Curriculum also includes seven Essential Learning Outcomes (ELOs). The Diversity and Cultural Awareness (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) (DCA) and Social Responsibility and Ethics (https://www.uml.edu/resources/catalog-archive/current/Undergraduate.pdf) (SRE) are met outside this major. See the DCA course list (https://www.uml.edu/resources/catalog-
Astronomy Electives:

Twelve (12) credits of upper-level physics electives must be completed from the following list of approved Astronomy courses.

- PHYS.3050
  Exoplanets

- PHYS.3370
  Geometric Optics

- PHYS.3830
  Astronomy &Astrophysics

- PHYS.3840
  Observational Astronomy

- PHYS.4170
  Space Science Mission Design

- PHYS.4560
  Radiative Processes in Astrophysics

- PHYS.4640
  Particle Astrophysics

- PHYS.4690
  Plasma Physics

Current UMass Lowell students should use their Advisement Report in SiS. If you need assistance, please contact your adviser.

Restriction on off-campus study:

Be advised that any course taken at another institution must be formally approved prior to enrollment. See the catalog policy for details.

_Last Updated: 11/8/2021_
PHYS.1010 Introductory Physics (Formerly 95.101) - Credits: 3
A survey course for students majoring in sound recording technology. Topics covered include: one and two dimensional motion, Newton’s Laws of dynamics, statics, circular motion, work and energy, linear and angular momentum, electrostatics, electric and potential fields, magnetic fields, vibrations, waves, sound, Faraday’s Law and AC circuits.

PHYS.1010L Introductory Experimental Physics (Formerly 96.101) - Credits: 1
Experimental physics with topics correlated with the corequisite lecture course.

PHYS.1030 General Physics I (Formerly 95.103) - Credits: 3
Serves as the first semester of a one-year course which surveys the field of physics at a non-calculus level. Topics include force and motion, vectors, gravity, energy and momentum, heat and thermodynamics, and oscillations, waves and sound. Although the course emphasizes conceptual understanding, a functional knowledge of algebra and geometry is essential.

PHYS.1030L General Physics I Lab (Formerly 96.103) - Credits: 1
Presents the first semester of a one-year course which surveys the field of experimental physics with topics correlated to the corequisite lecture course.

PHYS.1040 General Physics II (Formerly 95.104) - Credits: 3
Provides a continuation of 95.103. Topics include electricity and magnetism, geometrical and physical optics, atoms, and nuclei.

PHYS.1040L General Physics II Lab (Formerly 96.104) - Credits: 1
Serves as a continuation of 96.103 with topics correlated with the corequisite lecture course.

PHYS.1050L Sounds of Music (Formerly 96.105) - Credits: 3
Examines the physical process that makes musical sounds from acoustic instruments. Hands-on laboratory experiences explore how the vibrations of strings, air columns, membranes, plate and bars are transformed into musical sounds, how these propagate and are transformed by the listening space, and how these are received by ears and perceived by the brain. In addition, harmonic series, the mean-tempered scale, the use of decibels, sonic interference and diffraction are explained.

PHYS.1120 Freshman Physics Seminar (Formerly 95.112) - Credits: 0-1
An introduction to the scientific methods of physics and the exploration of research opportunities for undergraduates.

PHYS.1210 Exploring the Universe (Formerly 95.121) - Credits: 3
Addresses topics that include: Planet Earth, its structure, plate tectonics, greenhouse effect, ozone layer, craters and dinosaurs; our satellite Moon; other planets; our star Sun and its energy source; other stars, the HR diagram and stellar evolution, white dwarfs, neutron stars, supernovae, black holes; our galaxy, the Milky Way, its structure; other galaxies; the universe, its structures and expansion; evolution of galaxies, quasars, cosmology, the Big Bang and Unification of the forces of nature. Satisfies Gen Ed science requirements for non-science majors. Does not satisfy science requirements for Science majors but may be used as a free elective by Science majors.

PHYS.1210L Exploring the Universe Laboratory (Formerly 96.121) - Credits: 1
Provides laboratory exercises to illustrate the basic principles and measurement techniques of astronomy. Quantitative techniques, properties of angles, modeling the earth-sun system, comparative planetology, the constellations, the inverse square law, blackbody radiation and spectra, the Hertzsprung-Russell diagram, distances to the stars, the Andromeda galaxy, cosmology. Satisfies Gen Ed science requirements for non-science majors. Does not satisfy science requirements for Science majors but may be used as a free elective by Science majors.

PHYS.1310 Technical Physics I (Formerly 99.131) - Credits: 3
Presents material in both the class and laboratory format. Topics include: vectors; one- and two- dimensional motion; Newton’s laws of motion; translational and rotational equilibrium; work and energy; linear momentum; and circular motion and gravitation. Two additional Friday night classes are required.

PHYS.1320 Technical Physics II (Formerly 99.132) - Credits: 3
Covers material in both the class and laboratory format. Rotational dynamics; mechanical vibrations and waves; sound; solids and fluids; thermal physics; heat and law of thermodynamics will be discussed. One session per week. Two additional Friday night classes are required.

PHYS.1410 Physics I (Formerly 95.141) - Credits: 3
First semester of a two-semester sequence for science and engineering majors. Mechanics including vectors, kinematics in one and two dimensions, Newton's laws of dynamics, work and energy, energy conservation, linear momentum conservation, rotational kinematics and dynamics, Newton's Universal Law of Gravitation, oscillatory motion and mechanical waves.

PHYS.1410L Physics I Lab (Formerly 96.141) - Credits: 1
Serves as an introductory course on methods and techniques of experimentation in physics with experiments in mechanics selected to support the concepts of the corequisite lecture course.

PHYS.1410SI Supplemental Instruction for Physics I - Navitas Only (Formerly 95.141SI) - Credits: 1
Supplemental Instruction for Physics I - Navitas Students Only. Credits do not count toward degree requirements.

PHYS.1440 Physics II (Formerly 95.144) - Credits: 3
Continuation of 95.141, Physics I. Electricity and magnetism including Coulomb's Law, electric field, Gauss’ Law, electric potential, Ohm’s law, DC circuits with resistors, magnetic field, Ampere's Law, Faraday's Law, inductance, Maxwell’s equations, and electromagnetic waves. Optics including Wave Optics (interference, diffraction) and Ray Optics (reflection, refraction, dispersion, ray tracing).

PHYS.1440L Physics II Lab (Formerly 96.144) - Credits: 1
Serves as a continuation of 96.141 with experiments in optics, electricity and magnetism.

PHYS.1410 Honors Physics I (Formerly 95.161) - Credits: 4
Introductory mechanics at a more challenging level and the first semester of a sequence for physics majors. Mechanics of particles in one dimension, kinematics, forces, dynamics; particles in two and three dimensions, vectors, curvilinear and oscillatory motion; conservation principles, work, energy, linear momentum, collisions; rotational mechanics, angular momentum, torque and static equilibrium; gravitation and planetary orbits; wave motion, transverse and longitudinal, standing waves.

PHYS.1410L Honors Physics I Laboratory (Formerly 96.161) - Credits: 2
An introductory laboratory course at the honors level on the methods and techniques of experimental physics. Lectures on measurement uncertainties and error analysis are included and experiments are selected principally in mechanics.

PHYS.1640 Honors Physics II (Formerly 95.164) - Credits: 4
Geometrical optics, reflection, refraction, flat and curved mirrors, thin lenses; physical optics, interference and diffraction; electrostatics, charge, electric forces, fields and flux, electric potential, capacitance and field energy; electric charge in motion, currents, DC and RC circuits; magnetic fields, forces on moving charges, magnetic field of an electric current, electromagnetic induction, inductance, changing currents, AC circuits; electromagnetic radiation; the limits of classical electromagnetic theory.

PHYS.1640L Honors Physics Lab II (Formerly 96.164) - Credits: 2
A continuation of 96.161 with experiments selected principally in optics, electricity and magnetism.

PHYS.2010L Health Physics Internship I (Formerly 96.201) - Credits: 3
Applied work experience as a health physics technician at a government laboratory or a radiation facility of some industry, hospital, or education and research institution.

PHYS.2040 Introduction to Radiological Sciences (Formerly 95.204) - Credits: 3
This course is designed to introduce students to the working practices encountered in health physics. This is accomplished through field trips to local facilities that use radioactive materials, laboratory exercises, and class discussions. This class exposes the student to basic health physics procedures, vocabulary, and equipment.

PHYS.2100 Introductory Modern Physics (Formerly 95.210) - Credits: 3
Special theory of relativity, experimental basis of quantum theory, structure of the atom, wave properties of matter, quantum theory, hydrogen atom, atomic nucleus, nuclear interactions and applications, and semiconductors.

PHYS.2450 Physical Properties of Matter (Formerly 95.245) - Credits: 3

Fluid statics, dynamics of fluids, properties of solids, advanced topics in waves and vibrations, temperature and heat flow, kinetic theory of gases, thermodynamics, and the limits of classical physics.

PHYS.2450L Physics III Lab (Formerly 96.245) - Credits: 1

Experiments are selected principally in properties of solids, vibrations, waves, heat, and thermodynamics.

PHYS.2610L The Physics of Materials and Devices (Formerly 96.261) - Credits: 3

Investigating the phenomenology of materials involve sensing devices in which electrical signals must be evaluated. Observing physical phenomena with an electrical sensing device enables one to calibrate the dynamics of the electrical signal associated with the changes in the physical phenomenology observed with that device. Applications in these laboratory-based measurement techniques include the Wheatstone bridge, current/voltage device characterization, the operational amplifier as an active filter, stress & strain, Newton's law of cooling, Stefan/Boltzmann's law and the ideal gas law.

PHYS.2620L Principles in Laboratory Automation (Formerly 96.262) - Credits: 3

This is an introduction to the principles of automating today's research laboratory. A foundation of the Labview-based software and hardware tools required to conduct computer-controlled experiments will be presented, demonstrated and then used to acquire, display and analyze data on some typical physical phenomena. Students will be fully involved in designing the control and acquisition software as well as setting up the experimental hardware. Applications of the automated acquisition environment include AC characterization of RC and LRC circuits, the use of thermistors and thermocouples along with acquiring the temperature dependent resistivity of high Tc super conductors.

PHYS.2690 Honors Physics III (Formerly 95.269) - Credits: 4

Statics and dynamics of fluids, pressure, viscosity, Archimedes and Bernoulli principles, mechanical properties of solids, stress and strain, shear, electric and magnetic properties of materials, para- dia- and ferromagnetism, electro-mechanical and magneto-mechanical effects, hysteresis, advanced topics in waves and vibrations, damping, resonance in mechanical and AC oscillators, thermodynamics, Maxwell's velocity distribution, blackbody radiation, and the limits of classical physics, introduction to special relativity.

PHYS.2800 Introduction to Space Weather - Credits: 3

"Space weather" is a multi-disciplinary field of science studying the conditions on the Sun and in the solar wind, magnetosphere, ionosphere, and thermosphere that can influence the performance and reliability of space-born and ground-based technological systems and can endanger human life or health. Space weather depends on the behavior of the Sun, the nature of Earth's magnetic field and atmosphere, and our location in the Solar system. In this course for science and engineering students, the phenomenology of the solar-terrestrial relationship is introduced and basic physics describing this interaction is explored.

PHYS.3010L Health Physics Internship II (Formerly 96.301) - Credits: 1-3

PHYS.3020L Health Physics Internship II (Formerly 96.302) - Credits: 3

PHYS.3040 Vibration and Sound (Formerly 95.304) - Credits: 3

The course serves to integrate the various sub-topics of physics that undergraduate majors have experienced by exploring the physical processes of vibrations of lumped and continuous electrical mechanical and acoustic systems: the damped harmonic oscillator in electrical and mechanical form, the flexible string in tension and the coaxial cable with differing end conditions, vibrations of bars, membranes and plates, plane waves of sound, standing waves, radiation and scattering. Throughout reference is made to analogous process in the quantum mechanical domain. Closely coordinated with the recitations is the co-requisite laboratory course, which provides concrete experience with the phenomena discussed in the recitations.

PHYS.3040L Vibration and Sound Lab (Formerly 95.304) - Credits: 1

A series of four directed four-hour experiments and one student directed experiment all of which are coordinated with Vibration and Sound 95.304. Emphasis is on non-intrusive measurement techniques; choosing, evaluating and applying appropriate transducers and structuring data processing and display in measurements of transfer functions. Impedances and
modal structures for the system studied analytically in the companion course.

**PHYS.3050 Exoplanets - Credits: 3**

Beginning with the history of exoplanet research, observational techniques (transits, radial velocity, microlensing, direct imaging), and observations of exoplanet atmospheres via transmission spectra, the course will survey this rapidly developing field and focus on its theoretical foundations, including planet formation and dynamics, planetary atmospheres, planet habitability and astrobiology, star-planet interaction, and space weather on exoplanets.

**PHYS.3080 Physics with Computers I (Formerly 95.308) - Credits: 3**

**PHYS.3160 Science and Technology in an Impoverished World (Formerly 95.316) - Credits: 3**

Intended for junior-level science and engineering majors, this is a one-semester 3-credit course focused on the impact of science and technology in poverty-stricken regions of the world. Students will be challenged to consider the implementation of past and present technologies for solving resource shortages, evaluate and strengths and limitations of these solutions while developing alternatives to address future barriers to positive change. Encouraged to work toward these issues, students will:
1) Pursue and evaluate topics in science and technology through the skills of inquiry, research, critical thinking and problem solving. 2) Demonstrate the knowledge for quantitative and qualitative analysis of problems in science and technology. #0 Analyze and interpret issues in interdisciplinary areas of science and engineering developing a level of comfort with solving unfamiliar problems using acquired knowledge and skills.

**PHYS.3370 Geometrical Optics (Formerly 95.337) - Credits: 3**

Properties of light, plane surfaces and prisms, thin and thick lenses, mirrors and stops, matrix methods applied to Gaussian (paraxial) optics, Lagrange-Helmholtz invariant, primary and chromatic aberrations, ray tracing and Abbe's sine condition, basic optical instruments including cameras, telescopes, and microscopes.

**PHYS.3380 Optics and Waves (Formerly 95.338) - Credits: 3**

Wave nature of light, mathematics of wave motion, electromagnetic theory of light propagation, reflection and refraction, Fresnel coefficients, polarization, interference, Young's experiment, fringe visibility and coherence, various interferometers, Newton's ring and applications, Fraunhofer diffraction by single and multiple apertures and diffraction gratings.

**PHYS.3530 Electromagnetism I (Formerly 95.353/553) - Credits: 3**

The theory of electromagnetic fields using vector analysis: electrostatic fields and potentials in vacuum, conductors, and dielectric media, magnetic effects of steady currents in nonmagnetic media, magnetic induction and time varying currents and fields. (offered as 95.553 for graduate credit)

**PHYS.3540 Electromagnetism II (Formerly 95.354.554) - Credits: 3**

Magnetic materials, electric multipoles, solutions to Laplace's equation, boundary conditions, image charge problems, Maxwell's equations; propagation of electromagnetic waves in vacuum, conductors and dielectrics; reflection and refraction of electromagnetic waves; radiation from dipoles and antennas. (offered as 95.554 for graduate credit).

**PHYS.3810 Mathematical Physics I (Formerly 95.381) - Credits: 3**

Intended for students having completed 2 full years of physics and math, this course is designed to develop competency in the applied mathematical skills required of junior and senior level physics majors. Covering topics involving infinite series, power series, complex numbers, and linear algebra along with vector and Fourier analysis, students will be trained with the rigor required to solve a wide range of applications in the physical sciences.

**PHYS.3820 Mathematical Physics II (Formerly 95.382) - Credits: 3**

Expanding on the skills mastered in 95.381 Mathematical Physics I, this course is designed to continue developing competency in the applied mathematics required of junior and senior level physics majors. Intended for students having completed at least 2 years of physics and math, topics covered will involve ordinary, differential equations, calculus of variations, tensor analysis, special functions, series solutions of differential equations, partial differential equations, and complex variables as well as probability and statistics. Students will be trained with the rigor required to solve a wide range of applications in the physical sciences.

**PHYS.3830 Astronomy and Astrophysics I (Formerly 95.383) - Credits: 3**

This course is designed for an interdisciplinary general undergraduate (upperclassmen) audience. Fundamentals of
PHYS.3840 Observational Astronomy - Credits: 3

The course provides project-based practical experience in observational astronomy. Guided by faculty, students will make their own astronomical investigations using telescopes, cameras, and spectrographs. Participants will become trained and certified to use the university observatory. Observations may include stars, planets, galaxies, the sun, and phenomena of tropical interest. Skills will be developed in image processing, data visualization, controlling telescopes/instruments, obtaining data remotely, and communication of results to peers.

PHYS.3930L Advanced Experimental Physics Laboratory I (Formerly 96.393) - Credits: 2

Some of the most significant experiments in the history of physics are revisited. Form measuring the universal gravity constant to observing the quantization of light and matter, this laboratory course challenges students’ experimental skills and tests their understanding of fundamental concepts. Preparing high quality lab reports and presentations is emphasized.

PHYS.3940L Advanced Physics Lab II (Formerly 96.394) - Credits: 2

A continuation of 96.393 with experiments selected mainly from condensed matter and nuclear physics. Opportunities for independent work by permission of the instructor.

PHYS.4010 Radiation Safety and Control I (Formerly 95.401) - Credits: 4

Introduction to radiation protection, including radiation sources, radiation dose and dose measurement, radiation exposure, radiation protection techniques, monitoring methods and instruments, contamination control and waste storage, facility design, hazards analysis, and applied health physics techniques for the safe handling and control of radioactive material including laboratory. (offered as RADI.5010L for graduate credit)

PHYS.4020L Radiation Safety and Control II (Formerly 95.420/98.502) - Credits: 3-4

This course provides a continuation of the theoretical and practical aspects of radiation protection provided in Radiation Safety and Control I (95.501). Topics include the statistical analyses and data reduction techniques that are used to analyze radiation measurements pertaining to the field of radiation protection. Laboratory sessions on alpha and gamma radiation measurements and air sampling will reinforce class lectures.

Students also will experience applied radiation protection and dose assessment through a contamination control exercise that involves the use of protective clothing and respiratory protection.

PHYS.4060 Nuclear Instrumentation (Formerly 96.406) - Credits: 3

This course provides the operating principles and applications of nuclear radiation detection systems, including detector theory, electronic signal processing, and measurement and data reduction techniques. The systems covered include gas-filled detectors (ion chambers, proportional counters, and Geiger-Mueller counters), inorganic and organic scintillators, and high-purity germanium detectors, for the detection of alpha, beta, gamma, and neutron radiation. This course also covers hypothesis testing, detection limits, and detector dead time (offered as 98.506 for graduate credit).

PHYS.4090 Nuclear Instrumentation (Formerly 96.409) - Credits: 3

This course provides the operating principles and applications of nuclear radiation detection systems, including detector theory, electronic signal processing, and measurement and data reduction techniques. The systems covered include gas-filled detectors (ion chambers, proportional counters, and Geiger-Mueller counters), inorganic and organic scintillators, and high-purity germanium detectors, for the detection of alpha, beta, gamma, and neutron radiation. This course also covers hypothesis testing, detection limits, and detector dead time. This course is adapted for Nuclear Engineering and Medical Physics majors. (offered as 98.509 for graduate credit).

PHYS.4110 Physics Perspectives (Formerly 95.411) - Credits: 1

Discussions on the role of the professional physicist in society.

PHYS.4110L Senior Research In Radiological Sciences (Formerly 96.411) - Credits: 3

A research problem related to the field of radiation protection is investigated by the student under the direction of faculty and staff of the Nuclear Center. The student will present a seminar on this research project. Areas of research may include radiation shielding, radiation detection and measurement, radiation survey and monitoring, radiation biology, radiation chemistry, radiobiology, radiochemistry, radiocology, natural radioactivity, fallout, analyses and measurement of radioactivity and radiation levels associated with the operation of reactors and accelerators, and radioactive aerosols.
PHYS.4130 Mechanics (Formerly 95.413/513) -  
Credits: 3  

PHYS.4170 Space Science Mission Design (Formerly 95.417/517) - Credits: 3  
This one-semester, 3-credit course intended for junior level science and engineering majors, is centered around the conceptual design of a spaceflight mission. In this project-based and team-based class, students will apply their science and technical knowledge to develop a spacecraft and mission concept tailored to answer a specific science question. Students will perform quantitative trade studies consistent with real-life constraints such as cost, schedule, manufacturability, team-expertise, operational environment, mission lifetime, etc. Students will 1) learn the fundamentals of key subsystems involved in a space flight mission and 2) apply their skills of inquiry, research, critical thinking to design a complete space science mission to solve a real-world problem while working within a multidisciplinary team.

PHYS.4210 Statistical Thermodynamics (Formerly 95.421/521) - Credits: 3  
An integrated study of the thermodynamics and statistical mechanics, review of the experimental foundations and historical development of classical thermodynamics; probability and statistical methods of studying macroscopic systems; atomic basis of the laws of thermodynamics and microscopic definitions of thermodynamics quantities using the method of ensembles; entropy and related quantities; TdS equations, Maxwell relations, equation of state, and applications; canonical and grand canonical ensembles; phase transitions; quantum statistics; application to radiation, magnetism, specific heats. (offered as 95.521 for graduate credit)

PHYS.4240 Environmental Health Physics (Formerly 98.524 & 94.424) - Credits: 3  
Natural and man-made sources of environmental radioactivity and radiation; environmental transport in air, water, and soil; exposure pathways; environmental standards and regulations; environmental monitoring and surveys (MARSSIM); contaminated site characterization, and site remediation; environmental radiological impact of industry, accidents, and natural and man-made disasters.

PHYS.4360 Introductory Quantum Mechanics II (Formerly 95.436) - Credits: 3  
The three dimensional Schroedinger equation, the deuteron nucleus, angular momentum, spin, the hydrogen atom, spin-orbit interaction, Zeeman effect, Pauli exclusion principle, atomic structure, multi-electron atoms, the Fermi gas, X-rays. (offered as 95.536 for graduate credit)

PHYS.4390 Electro-Optics (Formerly 95.439/539) - Credits: 3  
Optical properties of materials, including dispersion, absorption, reflection and refraction at the boundary of two media. Crystal optics and induced birefringence and optical activity. Polarization states and Jones matrices. Applications to electro-optic devices. Experiments and projects involving the study of optical sources and detectors, spectroscopy, polarization, birefringence, Pockels' effect, optical fibers, and optical communication. (offered as 95.539 for graduate credit)

PHYS.4410 Radiochemistry (Formerly 95.441) - Credits: 3  
This course stresses analytical techniques applicable to identification and quantification of radionuclides in various sample types. Considerable time will be spent on review of general chemistry and inorganic analytical chemistry. The theories and applications of various separation techniques including precipitation, solvent extraction, ion exchange chromatography, and electrodeposition will be discussed with emphasis on separation of radioactive species. Additional material to be covered includes instrumental techniques for analysis of radioactive species, radiotracer and isotope dilution techniques, neutron activation analysis, and sample preparation.

PHYS.4450L Characterization of Materials (Formerly 96.445/545) - Credits: 2  
A one-semester course designed to teach the student several of the important techniques for characterizing the structural, optical, and electronic properties of materials. Experiments will include x-ray diffractometry, hardness measurements, ellipsometry, visible and near infrared spectroscopy, far infrared spectroscopy, and raman spectroscopy.

PHYS.4530L Health Physics Capstone (Formerly 95.453) - Credits: 3  
This course will provide the B.S. candidate in Physics (Radiological Health Physics option) with an undergraduate capstone experience through basic independent research, including critical thinking, problem solving, report writing, and
presentation skills.

PHYS.4531L Optics Project (Formerly 96.453) - Credits: 3

This course will provide the graduating physics major with a capstone experience through an exposure to the rudiments of independent research; incorporating critical thinking, problem-solving, report-writing, and presentation skills learnt in the course of the undergraduate curriculum. Prerequisite: Senior Status.

PHYS.4560 Radiative Processes in Astrophysics (Formerly 95.456/556) - Credits: 3

Our knowledge of the universe beyond the Solar System is derived almost entirely from our interpretation of the radiation we receive from the universe; Our knowledge of the Earth’s upper atmosphere and the atmospheres of other solar system objects is heavily dependent on observations of electromagnetic radiation. To understand the atmospheres of Earth and other planets, stars, galaxies and the universe, we need to understand the processes which produce electromagnetic radiation, and how radiation interacts with matter and propagates through space. This course describes the basic processes which create and alter such electromagnetic radiation before it’s detected here in the Solar System. The course will consist of a combination of lectures, problem sets and class discussion sessions. The lectures will be expanded from the material in the text and will include additional material on the astrophysical and planetary context of radiative processes, drawn primarily from the following list of references. The discussion sessions will often be based on recent problem sets - regular participation of students in class discussions is expected.

PHYS.4610 Nuclear Physics I (Formerly 95.461/561) - Credits: 3

Nuclear properties including size, mass, binding energy, electromagnetic moments, parity and statistics; nuclear shell model, collective structure, deformed shell model, radioactive decay law and the Bateman equations, radioactive dating, counting statistics, energy resolution, coincidence measurements and time resolution, lifetime measurements; nuclear barrier penetration; angular momentum, Coulomb barrier, alpha decay and systematics, fission. (offered as 95.561 for graduate credit).

PHYS.4620 Radiation Biology (Formerly 95.462) - Credits: 3

Effects of ionizing radiation on cellular, molecular and organ systems levels of biological organization; Study of x-rays, gamma rays, accelerator beams, and neutrons in interaction with living systems; Cohesive treatment of radiation biophysics with applications in health physics and radiation oncology. (offered as 98.562 for graduate credit)

PHYS.4630 Computational Methods in Physics - Credits: 3

A practical overview of advanced computational methods currently used in physics research using kinetic, fluid, and spectral approaches, as well as other practical applications that physics researchers may encounter, such as high-performance computing and grid construction. The course will focus on hands-on experience with coding the algorithms of finite differences, finite volume, finite elements, Monte Carlo, particle in cell, and spectral methods, and will provide the students with tools to develop and use scientific numerical models.

PHYS.4640 Particle Astrophysics (Formerly 95.464/564) - Credits: 3

PHYS.4690 Plasma Physics - Credits: 3

Introduction to plasma physics, focusing on the fundamental physics principles aimed at upper level undergraduate and graduate students in physics and engineering. Material covered in the course includes single particle motion in a magnetic field, particle drift, adiabatic invariants, kinetic theory moments,
fluid approximation of plasma & magnetohydrodynamics, waves in plasma, shocks, resistivity, plasma instabilities, plasma kinetic theory, plasma applications, and computational plasma physics.

PHYS.4720 Solid State Physics (Formerly 95.472/572) - Credits: 3
Crystal structures, x-ray diffraction, crystal binding, lattice vibrations, free electron and band models of metals. (offered as 95.572 for graduate credit).

PHYS.4770 Solid State Electronic and Optoelectronic Devices (Formerly 95.477/577) - Credits: 3
This course is an introduction to solid state electronic and optoelectronic devices for undergraduate science students (i.e. biology, chemistry, mechanical engineering, electrical engineering, physics, etc.) graduate students just entering a scientific endeavor which utilizes solid state devices, and practical engineers and scientists whose understanding of modern electronics and optoelectronics needs updating. The course is organized to bring students with a background in sophomore physics to a level of understanding which will allow them to read much of the current literature on new devices and applications. The course will cover fundamental crystal properties, atoms and electrons, energy bands and charge carriers, excess carriers, junctions and p-n junction diodes (includes photodiodes and light-emitting diodes). Three or four practical demonstrations will also be performed with the analysis of the generated data assigned as homework. (offered as 95.577 for graduate credit)

PHYS.4810 Mathematical Methods of Radiological Sciences (Formerly 95.481) - Credits: 3
An applied course emphasizing the mathematical skills used in radiological sciences/health physics fields, including special techniques used in radiation physics, radiation dosimetry, and radiation shielding. Computer applications will be emphasized. (offered as 98.581 for graduate credit)

PHYS.4820 Numerical Methods of Radiological Sciences (Formerly 95.482) - Credits: 3
Advanced mathematical treatment of topics covered in 98.481 with extensive application of computer techniques to problem solutions applicable to Radiological Sciences and Protection. (offered as 98.582 for graduate credit)

PHYS.4950L Special Research Problems I (Formerly 96.495) - Credits: 3
Special problems in physics assigned to the individual student with emphasis on modern research methods and preparation of results for publication.

PHYS.4960L Special Research Problems II (Formerly 96.496) - Credits: 3
A continuation of 96.495 for a second semester.

PHYS.4970L Senior Thesis in Physics (Formerly 96.497) - Credits: 3
SCIE.1500 Exploring the Sciences - Credits: 1

The seminar is designed to help undeclared science students make an informed and sound decision regarding their choice of major. The course surveys the different disciplines and curriculum options within the College of Sciences as well as their associated career paths. Students will engage in personal assessments and develop career planning and decision-making skills to better guide their selection of a specific major. The course also provides an introduction to various academic success strategies and an overview of campus resources.

SCIE.1990L Intercollegiate Sciences Lab 1000 level elective. - Credits: 1

SCIE.2100 Professional Development Seminar (Formerly 82.210) - Credits: 1

The Professional Development Seminar is designed to provide students with the necessary structure, resources, and support to successfully secure and engage in their first cooperative education experience. Through a variety of teaching methodologies and assignments, students will prepare to engage in the job search process through resume writing, strategic interviewing, professional networking and through learning professional behavior and presentation skills. Course open to undergraduates who have previously applied and been accepted to participate in the Professional Co-op Program. Enrollment is by Instructor permission only. For more information on applying to the Professional Co-op Program, see https://www.uml.edu/student-services/Career-Services/Cooperative-Education/Forms-Handbooks.aspx. Pre-Req: Permission of Instructor.

SCIE.2200 Integrated Sciences: Biology, Ecology, and Earth - Credits: 3

SCIE.2200 is one of two required science courses for BA Ed Elementary Education majors. This course introduces future educators to the basic concepts and applications in Biology, Ecology, and Earth Sciences. Lectures, inquiry-based activities, and laboratory sessions are closely integrated. Students become skilled in scientific practices, including generating and testing hypotheses and gathering and analyzing data.

SCIE.2400 Integrated Sciences: Astronomy, Physics, and Tech - Credits: 4

This is one of two required science course for BA Ed Elementary Education majors. This course introduces future educators to the basic concepts and applications of Physics, Chemistry, Astronomy, and Engineering Technology. Lectures, inquiry-based activities, and laboratory sessions are closely integrated. The course explicitly addresses laboratory skills, tools, and the use of technology in the application of content.

Students become skilled in scientific practices, including generating and testing hypotheses, and gathering and analyzing data.

SCIE.3100 Co-op Assessment 1 (Formerly 82.310) - Credits: 1

The primary goal of this seminar is to assist students in the overall assessment of their overall cooperative education experience. Through facilitated small group discussion, individual consultation and hands on practice, students will have an opportunity to identify and articulate their technical and professional skills, and explore how these skills and their co-op employment might be translated and leveraged into future work environments and their academic program at UML.

SCIE.3200 Co-op Assessment I (6 months) - Credits: 2

This seminar is designed to support and assist students in the assessment of their 6 month cooperative education experience. Students will reflect of their extended time in a work environment, the impact of their experience on their planning, and how organizational culture, personal interests and values can inform their subsequent decisions for career development. Through facilitated small group discussions, individual consultation and hands on practice, students will have the opportunity to identify and articulate their technical and professional skills.

SCIE.4100 Co-op Assessment 2 (Formerly 82.410) - Credits: 1

This seminar is designed to support and assist students in the continued assessment of their cooperative education experience. Through a deepening of their work in Co-op Assessment 1, students will review their overall performance in the cooperative education program, while continuing to demonstrate their technical and professional skills through written work and public presentations to multiple audiences. It is expected that students will clearly define their future academic and career goals, enhance their professional networks, and develop a future plan to support aspirations related to their major.

SCIE.4200 Co-op Assessment 2 (6 months) - Credits: 2

This seminar is designed to support and assist students in the assessment of their second cooperative education work experience that was for a 6 month cycle. Students will reflect on their extended time in this second work environment, and how their two different co-op work experiences impacts their
subsequent decisions for career development. Students will review their overall performance in the cooperative education program, and demonstrate their technical and professional skills through written work and public presentations to multiple audiences.
RADI.1010 Radiation and Life (Formerly 99.101) -
Credits: 3
This course will provide students with an understanding of the nature, sources, uses, and biological effects of natural and man-made radiations. Radiations discussed include non-ionizing radiations such as ultraviolet and microwave as well as the ionizing radiations produced by radon in homes and radio nuclides released from nuclear power plants. Students will have a better understanding of the risks and benefits of radiation in the modern world. Satisfies Gen Ed science requirements for non-science majors. Does not satisfy science requirements for Science majors but may be used as a free elective by Science majors.

RADI.1020L Radiation and Life Laboratory (Formerly 99.102) - Credits: 1
This laboratory course which is suitable for non-science majors will provide the student with an opportunity for some hands-on experience with modern equipment used to identify and quantify levels of radioactivity in the environment. Students will measure radiation from a variety of sources and will determine concentrations of radionuclides in several environmental samples including making measurements of the radon levels in the air of their own homes. Students will also study the effects of ionizing radiation on the germination and growth rate of exposed seeds. Satisfies Gen Ed science requirements for non-science majors. Does not satisfy science requirements for Science majors but may be used as a free elective by Science majors.

RADI.1330 Technical Physics III (Formerly 99.133) -
Credits: 3
Presents material in both the class and laboratory format. Reflection, refraction, mirrors, lenses, wave optics, optical instruments, Coulomb's law, magnetic force, quantum physics, atomic physics and nuclear physics will each be addressed. One session per week. Two additional Friday night classes are required.

RADI.4810 Mathematical Methods of Radiological Sciences (Formerly 98.481/581) - Credits: 3
This course provides an overview of applied mathematical concepts that are useful in radiological sciences and protection, including special techniques for radiation physics, radiation dosimetry, and radiation shielding, with emphasis on computer applications.
EDUC.1000 Teaching in the Inclusive Classroom, Part I - Credits: 2

This course introduces students to what it means to teach in an inclusive elementary classroom. Students will be introduced to designing standards-based lesson plans and measurable learning outcomes. Additionally, they will begin to learn the importance of both formative and summative assessment. Students will learn and practice classroom management techniques to create a safe and effective learning community. Students will also be introduced to effective strategies for differentiation of instruction to make learning accessible to all students.

EDUC.1100 Introduction to teaching in Inclusive Classrooms - Credits: 3

The course provides teachers candidates with an introduction to planning lessons and the opportunity to teach small groups of students in a partner elementary school. Additionally, teacher candidates will begin to use technology that will assist them in managing their own classroom. Teacher candidates will be expected to demonstrate commitment, professionalism and appropriate dispositions for working with diverse learners.

EDUC.1500 Teaching in the Inclusive Classroom, Part 2 - Credits: 2

This course is a continuation of the Part I course. Students will continue to explore and practice teaching in an inclusive elementary classroom. They will work on refining curriculum development skills including designing a unit and standards-based lesson plans with clearly-aligned assessments and measurable learning outcomes. Students will refine and practice classroom management techniques to create a safe and effective learning community that promotes democratic practices and is an example of a culturally responsive classroom. Students will also practice and refine effective strategies for differentiation of instruction to make learning accessible to all students.

EDUC.1600 Technology and Digital Literacy in the Classroom - Credits: 3

This course allows students to explore the wide-range of educational technologies, including technology for teaching, as well as technology of learning. Students will explore educational technology standards for teaching and learning, have a chance to try out many types of technologies, and see how these technologies are being used in classroom.

EDUC.2000 Foundations of Reading - Credits: 3

This course focuses on the psychological bases of reading process, stages in development of reading ability and the sequence of reading skill acquisition. Topics covered will include the nature of oral language development, the reading process, and the relationship between reading, writing, speaking, listening, visualizing and visually representing. Students will study models of literacy instruction, and the theoretical and practical reasons undergirding those models. The use of diagnostic strategies for knowing the learners' literacy performance and strategies for remediation will be examined. The format of the course will be primarily lecture, discussion, small group activities and presentations.

EDUC.2030 Multicultural Children’s Literature in the Classroom - Credits: 3

This course can be applied to the education minor. The purpose of this course focuses on the development of a critical lens that examines the cultural authenticity of multicultural children’s literature and the impact of cultural, ethnic, linguistic, gender, (dis)ability, social class, and religious diversity in children’s literature on the teaching and learning of young children with diverse backgrounds. Students in this course will also learn about the notion of "culturally sustaining pedagogy" through the use of multicultural children’s literature to understand and support children who have been traditionally underrepresented in elementary classrooms.

EDUC.2040 Coaching Young Adolescents - Credits: 3

This course is designed to better prepare future coaches who will be coaching young adolescents in schools, clubs, communities and other sporting environments.

EDUC.2050 Connecting Local and Global Issues in Education - Credits: 3

This educational minor course explores how we prepare students to thrive in a world of volatility, uncertainty, and complexity. Does the traditional view of what students need to know and be able to do by graduation provide the competencies needed to navigate that world? What to graduates need to be successful in a world we cannot even envision, in jobs that have yet to be created? This hybrid course is an elective.

EDUC.2060 Inclusion in Education and Society - Credits: 3

This course focuses on the how students with disabilities are included in education and society. The course offers multiple perspectives, strategies and readings to consider how inclusive schools and societies that provide supportive, context-appropriate conditions for learning can lead to more positive outcomes for all students and community members. Within the context of special education, students will be introduced to different types of disabilities and services that can be provided
in schools, communities and in society to ensure effective inclusion of people with disabilities. This course may be taken for the education minor.

EDUC.2100 Introduction to Moderate Disabilities - Credits: 3

This foundational course consists of two major components. The first provides candidates with a comprehensive examination of special education laws and legislation and the characteristics of students with moderate disabilities. The second component provides and overview of instructional models that have empirical support for their effectiveness in teaching students with moderate disabilities. Candidates also gain exposure to IEP writing and lesson planning.

EDUC.2200 Education Assessment of Students with Moderate D - Credits: 3

This course is designed to provide candidates with a framework for understanding the process of assessing students with moderate, high-incidence disabilities. Candidates focus on all aspects of the evaluation process from the point of pre-referral to identification and re-evaluation, with an emphasis on administering, scoring, interpreting, and reporting on formal and informal educational assessments. Emphasis is on the interpretation of assessment data for the purposes of making eligibility decisions and establishing individualized Education Program annual goals, objectives, instructional strategies, and placement decisions.

EDUC.2500 Teaching Elementary Social Studies in the Inclusive - Credits: 3

Teaching Elementary Social Studies prepares teacher candidates to help the younger learner gain knowledge about past and present human experiences as well as to develop the skills necessary to process and apply information. It also prepares the younger learner to develop democratic values and attitudes by providing opportunities for social participation.

EDUC.2990 Education 2000 level elective (Formerly 01.299) - Credits: 3

Education 2000 level elective.

EDUC.3000 Understanding Family and Community Engagement - Credits: 3

This course is designed to introduce undergraduate students to key concepts of family and community engagement. Students will utilize readings, discussions, and hands-on activities to examine their understanding of the role that families and communities play in the educational lives of students. They will learn community-based relational approaches and design on family or community engagement strategy to utilize in their classrooms. The course will also explore how social networks and school structures impact the development of meaningful relationship between teachers, families, and community members.

EDUC.3010 Early Literacy Community Experience I (Formerly 02.301) - Credits: 3

This is Part One of a two semester course that focuses on experiential learning associated with the Jumpstart Program. The course provides students in the education minor with the necessary skills for working with children in early childhood community agencies. Topics based on the National Association for the Education of Young Children (NAEYC) Standards which include child development, family and community, assessment, teaching and learning, literacy development, and professionalism will be the focus of the course.

EDUC.3020 Early Literacy Community Experience II (Formerly 02.302) - Credits: 3

This is Part Two of a two semester course that enhances the experiential learning of students in the education minor participating in the Jumpstart Program. Building on the knowledge base of the first semester, the course allows students to deepen their understanding of the social, emotional and behavioral needs of children in early childhood settings and reflect on how they have integrated what they learned during the experience.

EDUC.3050 Directed Study - Credits: 1-3

This directed study option is available for UG students who are interested in exploring an educational topic that is not in the educational minor and/or furthering their knowledge and skills about a topic that has been introduced in the educational minor. Students in the directed study will work extensively with one instructor who has a depth of knowledge and experience in this specific topic. With the guidance of the instructor, they will develop and submit a study plan with a final project (concrete deliverable that meet the rigor of a -- credit course).

EDUC.3200 Methods of Teaching Students with Moderate Disabilities - Credits: 3

This course focuses on practices to support teaching and learning of students with persistent academic and behavior difficulties. Consisting of four interrelated components, core topics addressed in the course include: (1) Effective classroom management to enhance appropriate behavior, prevent problem behavior, and support students at-risk for and with behavior difficulties; (2) Evidence-based instructional design
principles, explicit teaching procedures, and interventions for improving access to the general curriculum and specifically for promoting student capacity for decoding, vocabulary use, fluency, and comprehension; (3) Assistive technology use to support instruction and accessibility; and (4) Collaboration with colleagues and families.

EDUC.3400 Mathematics and Problem Solving in the Inclusive E - Credits: 3

There is a renewed focus in creating math learning environments in the elementary classroom where students are continuously involved in problem solving. In fact, one of the main goals in elementary math is to provide children with the experiences and support to use a variety of strategies to solve real-world problems. This course will help preservice teachers understand how children with different strengths learn math so they can develop, create, implement, and assess lessons and units that align with the Massachusetts Math Common Core State Standards.

EDUC.3500 Language and Writing Development - Credits: 3

This course focuses on the theories of language development and the relationship of language learning to the development of writing. Major themes of the course include theoretical frameworks, instructional, and curricular issues underpinning of language and writing development of young children and the need of designing language and writing instruction sensitive to the diverse backgrounds of children. Students will examine the major aspects of language and writing development such as cognition, texts, context, culture, and gender, etc. Specifically, students will examine important issues related to assessment and instruction in the teaching of writing.

EDUC.3600 Teaching Science through Inquiry in the inclusive - Credits: 3

In this course, students will do what scientists do: have a chance to ask and answer questions about the world around us, collect data in a variety of ways and use data to help investigate the world. Students will explore how carefully coaching children to learn the skills that scientists use can build their developing science literacy. Students will work in pairs and, with a mentor teacher in a local school, plan, implement, and assess a science unit. Using high-quality science kits, teaching pairs will focus on a different set of science teaching skills each week. The course instructor and mentor teacher will observe and provide verbal and written feedback each week. Must take 1 undergraduate laboratory science course.

EDUC.3710 Educational Psychology (Formerly 01.371) - Credits: 3

An introduction to the study of human learning, this course covers topics such as efficiency in learning, testing, the psychology of learning, and theories of learning. For undergraduates only.

EDUC.3730 Teaching and Learning with Technology (Formerly 01.373) - Credits: 3

Explore the wide-range of educational technologies, including technology for teaching, as well as technology of learning. We'll examine educational technology standards for teaching and learning, try out and apply many types of technologies and see how these technologies are being used in educational settings. Finally, you'll be trained and tested as a Google Level 1 Educator.

EDUC.3840 Language, Literacy and Culture (Formerly 01.384) - Credits: 3

The course examines the role that socio-cultural and socio-political contexts play in children's literacy development, with particular focus on English Language Learners (ELLs). The course is designed to help students understand the complex and dynamic worlds of diverse learners represented in twenty-first century classrooms. Students will learn new and effective approaches to teaching and learning that provides struggling learners, especially English Language Learners a fair and equitable chance to succeed in the learning contexts.

EDUC.3910 Understanding Education (Formerly 01.391) - Credits: 3

The aim of the course is to assist students to build knowledge about educational structures and roles in diverse settings as they consider how education could figure as a calling. Using a broad range of inquiry methodologies and technologies, students will explore areas of self-selected interest in formal educational settings (K-12 or higher education) or informal educational settings (community or health settings, policy, etc.). These explorations will culminate in case presentations in the form of digital stories, in which students will share their findings and discuss future goals in the area of education.

EDUC.3950 Special Topics in Education - Credits: 3

This course focuses on the exploration of thematic or issue-oriented or timely topics of interest in education and society. The precise topics and methods of each section will vary. Barring duplication of topic, the course may be repeated for credit.

EDUC.4000 Sheltered English Instruction - Credits: 3

This course will prepare students with the knowledge and skills to effectively shelter content instruction to ensure that English
Learners (ELs) can access grade level curricula, succeed academically and "contribute their multilingual and multicultural resources as participants and future leaders in the 21st century global economy" (MA DESE, 2016). This is a service-learning course. Students will be required to spend 15 hours in schools supporting the instruction of ELs and incorporating the skills and strategies that they learn in this course. This course has three overarching goals that are directly aligned with the MA DESE approved course.

EDUC.4010 Exploring Teaching (Formerly 01.401) - Credits: 3

This course is for third and fourth year undergraduates who are considering teaching as a career. Focusing on students, teachers, classrooms and schools, the course will provide an overview of the historical, philosophical, legal and societal influences that shape education today. Field work in an elementary, middle or high school will be an integral component of the course.

EDUC.4030 Understanding Child Development in a Diverse Society (Formerly 01.503) - Credits: 3

Examines the major theoretical frameworks of child development and how cultural differences affect development and learning. Focus is on helping students make responsive and culturally relevant pedagogical decisions.

EDUC.4050 Children with Disabilities in the Classroom (Formerly 01.505) - Credits: 3

This course examines the nature of cognitive emotional, developmental, sensory, and physical disabilities that compromise student capacity to make adequate academic progress without special intervention. Legal and ethical responsibilities of the educator in inclusive classroom settings and as an active member of a multidisciplinary learning team are emphasized.

EDUC.4100 Pre-practicum - Credits: 2

The pre-practicum focuses on what it means to be a teacher, as well as the content, dispositions and skills necessary to succeed in the teaching profession. Throughout the pre-practicum, learning about the teaching comes through a variety of opportunities: (1) Structured and focused observations in schools of different demographics; (2) Teaching experiences; (3) Participation in professional seminars on diverse educational topics; (4) Engagement with different types of school professionals around educational topics; (5) Reflection on coursework with a field experience component that bridges the gap between academic knowledge and practitioner knowledge.

EDUC.4110 Elementary Education Practicum and Seminar - Credits: 9

The Elementary Education Practicum is a culminating supervised field experience for Teacher Candidates. During this experience, the Teacher Candidates, with guidance and support from the Supervising Practitioner and the Program Supervisor, gradually work towards full-time teaching responsibility in the Supervising Practitioner’s classroom in a general education classroom. Beginning on the first day of classes and continuing through the last day of classes for the semester, Teacher Candidates will attend their practicum site all day, every day, following the calendar of the practicum site. They will mirror the expectations of their Supervising Practitioner. Successful completion of the Elementary Practicum includes meeting all expectations as described by the Department of Elementary and Secondary Education (DESE). The field experience is accompanied by a weekly seminar.

EDUC.4120 Special Education Practicum and Seminar - Credits: 9

The Special Education Practicum is a culminating supervised field experience for Teacher Candidates. During this experience, the Teacher Candidates, with guidance and support from the Supervising Practitioner and the Program Supervisor, gradually work towards full-time teaching responsibility by mirroring the responsibilities of the Supervising Practitioner. Beginning on the first day of classes and continuing through the last day of classes for the semester, Teacher Candidates will attend their practicum site all day, every day, following the calendar of the practicum site. They will mirror the expectations of their Supervising Practitioner. Successful completion of the Special Education Practicum includes meeting all expectations as described by the Department of Elementary and Secondary Education (DESE). The field experience is accompanied by a weekly seminar.

EDUC.4200 Elementary Education Practicum I - Credits: 3

This is the first practicum undertaken by teacher candidates and represents the first 100 hours of their required 300 hour practicum. Teacher candidates will spend on day each week for a full semester, working in a regular classroom setting. During the 100 hours, they will be supervised by a Supervising Practitioner and Program Supervisor.

EDUC.4300 Elementary Education Practicum II - Credits: 6

Elementary Education Practicum II is a continuation of practicum I in the same setting and requires completion of 200 hours of teaching in a Massachusetts Public School under the
supervision of a school-based Supervising Practitioner and a university Program Supervisor. The teacher candidate must assume responsibility for teaching for a minimum of 100 hours during the practicum. Candidates are required to attend a bi-weekly seminar at the Graduate School of Education throughout the practicum and successfully complete the Candidate Assessment of Performance (CAP).

EDUC.4400 Special Education Practicum - Credits: 6

The Special Education Practicum is required for a teaching license in special education at the PreK-8 level. The practicum requires 300 hours working, under the direction of the special education teacher (supervising practitioner) and a university program supervisor. The teacher candidate must assume responsibility for teaching for a minimum of 100 hours during the practicum. Candidates are required to attend a bi-weekly seminar at the Graduate School of Education throughout the practicum and successfully complete the Candidate Assessment of Performance (CAP).

EDUC.4410 Teach Reading/English Bilingual Student (Formerly 02.441) - Credits: 3
EDUC.4430 Methods of Teaching (Formerly 02.443) - Credits: 3

Examines the methods of teaching students with moderate disabilities. Topics include curriculum (including the Massachusetts frameworks), IEPs, and instructional modifications appropriate for students with special needs.

EDUC.4500 Clinical Seminar - Credits: 2

The clinical seminar occurs in conjunction with the elementary and special education practicum. Each seminar session addresses a different section of the Candidate Assessment of Performance (CAP) required for teacher licensure in the Commonwealth of Massachusetts. The seminar also provides the opportunity for teacher candidates to share experiences with peers and faculty. The seminar prepares candidates for their first teaching interviews by providing the services of the University’s career services who will focus on resume and cover letter writing and by creating opportunities for mock interviews with partner district principals, assistant principals and special education directors.

UTCH.1010 STEP 1: Inquiry Approaches to Teaching (Formerly UTL.101) - Credits: 1

This course provides students with an introduction to teaching in order for them to explore a career as a middle or high school math or science teacher. During the courses, students pairs teach math and/or science lessons in a local elementary school classroom and receive feedback from a mentor teacher.

Additionally, students are introduced to the theory and practice that is necessary to design and deliver excellent instruction. This course is the first step for those students interested in exploring the STEM TEACHING MINOR with UTeach UMass Lowell.

UTCH.1020 STEP 2: Inquiry Based Lesson Design (Formerly UTL.102) - Credits: 1

Students who are exploring teaching as a career become familiar with the middle school setting by observing and discussing the middle school environment, and by teaching several lessons in a middle school classroom. They build upon and practice lesson design skills that were developed in Step 1 and also become familiar with excellent science and mathematics curricula for the middle school setting.

UTCH.1030 Exploring Teaching and Learning in STEM - Credits: 3

This is an experiential learning course that also allows students to explore teaching and learning in a STEM content area. Students plan and teach inquiry-based science, math, technology, or engineering lessons, collect data on students' learning, and determine how they could make adjustments to improve the learning gains of students in a middle school classroom.

UTCH.2010 Knowing and Learning in Math and Science (Formerly UTL.201) - Credits: 3

The course starts by imparting the understanding that there is a science to learning and by having students examine ideas of what it means for an individual to know or understand something. This course focuses on several essential questions which enable students to explore how knowing and learning are structured with specific emphasis on mathematics and science. Students will come to understand what it means to know something, how we can understand student thinking and how theories of learning inform instructional decisions; in particular students will explore the idea that learning is a social activity. Students are prompted to reflect on their own ways of looking at various ideas and concepts and to consider alternative perspectives. Students will conduct an analysis of reasoning processes through a clinical interview process, one-on-one with learners engaging in problem solving. This course is required for the STEM TEACHING MINOR.

UTCH.2020 Interactions and Equity (Formerly UTL.202) - Credits: 3

This course examines the organization of instructional settings that maximize learning for all. Students will examine gender issues, cultural issues, bilingual education and learning
disabilities as they impact learner success. A major portion of the course is a field experience in which students interview high school teachers, observe a high school classroom, then teach three lessons. The purpose of these experiences is to ensure that students recognize the diversity of students and their specific learning needs. This course is required for STEM TEACHING MINOR.

**UTCH.2040 Perspectives on Mathematics and Science (Formerly UTL.204) - Credits: 3**

This course examines the history and philosophy of mathematics and science. Students will explore a selection of topics and episodes in the history of science and mathematics recognizing that many gains in knowledge have emerged through struggle, and in spite of resistance from cultural, religious and social structures. Students will learn that ideas in science and mathematics are dynamic and that disagreement can often lead to major breakthroughs. Students must think critically about how K-12 STEM education texts portray the history and philosophy of science and mathematics. This course is required for the STEM TEACHING MINOR.

**UTCH.3010 Project-Based Instruction (Formerly UTL.301) - Credits: 3**

This is a key component of the Minor as it engages students in designing, implementing and employing a project-based curriculum. Students will observe project-based learning in high schools, before creating and leading their own field-based unit. The unit must incorporate major components of project-based learning, namely collaboration, formulating questions, making predictions, designing investigations, collecting and analyzing data, making products and sharing ideas. This course is required for the STEM TEACHING MINOR.

**UTCH.3020 Research Methods (Formerly UTL.302) - Credits: 3**

The goal of this course is to provide students with an understanding of and the ability to use tools that scientists use to solve problems. Students will also learn how scientists communicate their findings and engage in peer-review. Students design and carry out four independent inquiries, which they write up and present in the manner that is common in the scientific community. Students will work in multidisciplinary teams. The course is divided between class and lab sessions, but is primarily lab-based. The topics of the class sessions are: Curiosity and Scientific Inquiry, Experimental Design and Analysis, Statistics, Modeling, Presenting Scientific Information. Students conduct their inquiries, incorporate statistics to interpret their results and present their scientific work orally. This course is required for the STEM TEACHING MINOR.

**UTCH.4010 Practicum (Formerly UTL.401) - Credits: 6**

This is the culminating experience to the STEM Teaching Minor and must be taken for initial teacher licensure. Students are required to spend a minimum of 12 weeks (full time) teaching a STEM subject in a middle or high school classroom and attend a weekly practicum seminar. Candidates are required to have (I) completed the STEM Teaching minor, (II) passed both of the required MTEL examinations and (III) maintained a minimum overall GPA of 2.7. For MATH, Science and Engineering student in the STEM Teaching minor.

**UTCH.4410 Teaching Emergent Bilingual Students (Formerly 02.541 & UTL.441) - Credits: 3**

The purpose of this course is to prepare new secondary teacher candidates with the knowledge and skills to effectively shelter their content instruction, so that the growing population of English learners (ELs) in PK-12 schools can achieve academic success, and contribute their multilingual and multicultural resources. The course will provide aspiring teachers with practical research-based methods, strategies, and protocols to integrate subject area content, language, and literacy. Successful completion of this course provides SEI (Sheltered English Immersion) endorsement, which is required for teaching in the Commonwealth of Massachusetts. This is a service learning course.

**UTCH.4910 Directed Study (Formerly UTL.491) - Credits: 1-9**
ACCT.2010 Accounting/Financial (Formerly ACCT/60.201) - Credits: 3

Presents a comprehensive, detailed exposure to basic accounting theory. Beginning with the accounting equation, students are introduced to the accounting cycle, preparation of the statement of financial position and the income statement, accounting for assets, liabilities, and stockholders’ equity of the firm, and cash flow and financial statement analysis.

ACCT.2020 Accounting/Managerial (Formerly ACCT/60.202) - Credits: 3

Examines the use of accounting systems for managerial decision-making. Budgeting, forecasting, and cost accumulation systems, which relate to manufacturing systems, will be studied.

ACCT.2030 Fundamentals of Accounting - Credits: 3

This course presents an intensive introduction to critical Financial and Managerial Accounting tools, techniques, and concepts. The course provides a comprehensive exposure to basic accounting theory and the use of accounting for managerial decision-making. Topics include the accounting equation, the accounting cycle, preparation of the financial statements, cost accumulation, cost behavior, and cost-volume-profit analysis.

ACCT.3020 Intermediate Accounting II (Formerly ACCT/60.302) - Credits: 3

Presents the in-depth study of the valuation and disclosure issues associated with corporate liabilities and stockholders’ equity. Emphasis is placed on the statements of the Financial Accounting Standards Board.

ACCT.3030 Accounting Information Systems (Formerly ACCT/60.303) - Credits: 3

Presents accounting as a system designed to meet the needs of external and internal users. Accounting information system concepts are emphasized. Topics include accounting transaction cycles, internal controls, and systems development processes.

ACCT.3099 Accounting Boot Camp - Credits: 1

This intensive accounting course is designed to prepare students for the rigors of the upper-level coursework of the accounting concentration by enhancing their foundation knowledge of financial accounting. The course emphasizes the accounting cycle, and covers the topics like accounts receivable, inventory, and revenue as deemed necessary. Students will also have the opportunity to network with accounting practitioners as an introduction to the professional world of accounting.

ACCT.3100 Corporate Financial Reporting I - Credits: 3

Corporate Financial Reporting I examines the Financial Accounting Standards Board’s regulations that make up generally accepted accounting principles relating to the preparation of external financial statements. The student will study, in depth, the accounting cycle, preparation of the Balance Sheet and Income Statement, and the standards/pronouncements governing cash, accounts receivable, notes receivable, and inventory as well as revenue recognition. The student will also begin to understand how data analytics tools are used by accountants.

ACCT.3100L Corporate Financial Reporting I Lab - Credits: 1

This course gives you additional practice in the concepts covered in ACCT.3100, Corporate Financial Reporting I.

ACCT.3200 Corporate Financial Reporting II - Credits: 3

This course is the second of three corporate financial reporting courses. This course provides the student with the breadth, depth and application of the accounting standards and regulations. The course covers accounting theory and practices associated with financial reporting issues of PPE, intangible assets, investments, liabilities, bonds, leases, and income taxes.

ACCT.3200L Corporate Financial Reporting II Lab - Credits: 1

This course gives you additional practice in the concepts covered in ACCT.3200, Corporate Financial Reporting II.

ACCT.3210 Cost Accounting (Formerly ACCT/60.321) - Credits: 3

An examination of the manufacturing function from the view of the cost accountant. Managerial control of the elements of product costs will be studied with an emphasis on cost accumulation systems both historical and estimated. Meets Core Curriculum Essential Learning Outcome for Quantitative Literacy (QL).

ACCT.3300 Corporate Financial Reporting III - Credits: 3

This course is the third of three corporate financial reporting
courses. This course presents the in-depth study of the valuation and disclosure problems associated with Pension (a part of corporate liabilities) and stockholders’ equity. After completion of this course, a CAPSTONE project is ready to be completed. Emphasis is placed on the pronouncements of the Financial Accounting Standards Board.

ACCT.4010 Advanced Financial Accounting I
(Formerly ACCT/60.401) - Credits: 3
Explores issues in accounting for large, multinational business entities. Consolidation, mergers, home office/branch accounting, international accounting topics, partnership and nonprofit organizations are also examined. Meets Core Curriculum Essential Learning Outcome for Applied & Integrative Learning (AIL) and Critical Thinking & Problem Solving (CTPS).

ACCT.4210 Auditing (Formerly ACCT/60.421) - Credits: 3
An examination of the purposes of financial statement audits. The following topics will be examined in depth: auditing standards, professional ethics, legal responsibilities, internal control, audit evidence, financial statement disclosures and audit reports.

ACCT.4310 Federal Income Taxes (Formerly ACCT/60.431) - Credits: 3
Deals with the basic rules and regulations of the Internal Revenue Code as it affects the individual and the corporation. An understanding of the code is developed through lectures, assigned readings, research, and the solution to a wide variety of problems. Meets Core Curriculum Essential Learning Outcome for Information Literacy (IL).

ACCT.4790 Accounting Internship (Formerly ACCT/60.479) - Credits: 1-3
Arrangements must be made with department internship coordinator.

ACCT.4800 Special Topics in Accounting/Internal Audit - Credits: 3
Special Topics in Accounting introduces students to the activities of an internal auditor and the role of internal auditing in organizations. It explains why internal auditors have such a great understanding of all aspects of the organization for which they work, such as: governance, sales & marketing, management oversight, human resources, supply chain, accounting, finance, compliance, information technology and general operations. Students will learn the basics of business processes; understanding business objectives, risk and controls as well as the steps required to plan, conduct, and report internal audit activities. The course will include a hands-on case study of performing an internal audit and/or consulting project.

ACCT.4991 Independent Studies (Formerly ACCT/60.499) - Credits: 1-3
An opportunity for students to carry out individualized study relating to the field of accounting under the supervision of a member of the accounting faculty.
BUSI.1500 Business 101 (formerly 66.017, MGMT 150, BUSI 150) - Credits: 3

This course will provide a foundational understanding of business, the various types of business organization, the key functional areas of business and how these functional areas are interconnected. Crucial skills such as use of technology, team-building, information literacy and communication will be emphasized. In addition, the course will provide an overview of contemporary business issues such as ethics and globalization. A major course goal is to enable students to gain a basic understanding of career opportunities particularly in relation to the areas of specialization within the Manning School of Business undergraduate curriculum.

BUSI.2100 Professional Development Seminar (Formerly BUSI 210) - Credits: 1

The Professional Development Seminar is designed to provide students with the necessary structure, resources, and support to successfully secure and engage in their first cooperative education experience. Through a variety of teaching methodologies and assignments, students will prepare to engage in the job search process through resume writing, strategic interviewing, professional networking and through learning professional behavior and presentation skills. Course open to undergraduates who have previously applied and been accepted to participate in the Professional Co-op Program. Enrollment is by Instructor permission only. For more information on applying to the Professional Co-op Program, see https://www.uml.edu/student-services/Career-Services/Cooperative-Education/Forms-Handbooks.aspx. Pre-Req: Permission of Instructor.

BUSI.3100 Co-op Assessment 1 (Formerly BUSI 310) - Credits: 2

The primary goal of this seminar is to assist students in the overall assessment of their overall cooperative education experience. Through facilitated small group discussion, individual consultation and hands on practice, students will have an opportunity to identify and articulate their technical and professional skills, and explore how these skills and their co-op employment might be translated and leveraged into future work environments and their academic program at UML.

BUSI.3200 Co-op Assessment 1 (6 months) - Credits: 3

This seminar is designed to support and assist students in the assessment of their 6 month cooperative education experience. Students will reflect of their extended time in a work environment, the impact of their experience on their planning, and how organizational culture, personal interests and values can inform their subsequent decisions for career development. Through facilitated small group discussions, individual consultation and hands on practice, students will have the opportunity to identify and articulate their technical and professional skills.

BUSI.4100 Co-op Assessment 2 (Formerly BUSI 410) - Credits: 2

This seminar is designed to support and assist students in the continued assessment of their cooperative education experience. Through a deepening of their work in Co-op Assessment 1, students will review their overall performance in the cooperative education program, while continuing to demonstrate their technical and professional skills through written work and public presentations to multiple audiences. It is expected that students will clearly define their future academic and career goals, enhance their professional networks, and develop a future plan to support aspirations related to their major.

BUSI.4200 Co-op Assessment 2 (6 months) - Credits: 3

This seminar is designed to support and assist students in the assessment of their second cooperative education work experience that was for a 6 month cycle. Students will reflect on their extended time in this second work environment, and how their two different co-op work experiences impacts their subsequent decisions for career development. Students will review their overall performance in the cooperative education program, and demonstrate their technical and professional skills through written work and public presentations to multiple audiences.

BUSI.4800 Current Topics in Business - Credits: 3

Topics of current interest in Business. Subject matter to be announced in advance. For a current semester course title, please log on to SIS, the Student Information System. Please see "notes" for the class to see the full description for individual topics.

BUSI.4890 Internship in Business Administration - Credits: 3

The Internship in Business provides three academic credits that count as a Manning elective for working in a business related position that integrates more than one business discipline with a minimum of 11 hours per week for a single semester. After developing a proposal in cooperation with their employer, students obtain the permission of the internship coordinator to enroll in the course. Students then perform their designated work duties during the semester, and also write a reflective
term paper which describes their work experience and relates it to their academic work in the other courses taken at UML. The grading of the internship course is based upon the evaluation from the employer and course deliverable determined by the internship coordinator.
FINA.2000 Personal Finance - Credits: 3
This course emphasizes the development of individually focused financial information and a comprehensive financial plan designed to enable the individual to manage his or her financial affairs. The course also integrates personal goals, such as buying a home, retirement, investing, and insurance needs, to help assure that the financial plan incorporates the major decision stages an individual will face.

FINA.2210 Intro to Investments (Formerly FINA 221/61.300) - Credits: 3
This course provides the background and skills for financial decisions that individuals need to make during their entire life. Topics will include the financial aspects of career planning, budgeting and consumer credit, the purchasing and financing decisions related to housing and other major expenditures, long-term saving and investing, insurance, and retirement planning. Although the course has no formal prerequisites, it assumes that students have some familiarity with basic high school algebra.

FINA.3010 Financial Management (Formerly FINA/61.301) - Credits: 3
Principles of financial management, including working and fixed capital, sources of funds, financial statements, financial planning and capital structure.

FINA.3030 Introduction to Financial Modeling - Credits: 3
This course consists of modeling exercises that will require students to work on computers in each session. Students will learn how to apply the methods of financial analysis and to conduct time trend analysis, scenario analysis, regression analysis, and optimization using spreadsheet and/or commonly-used statistical software.

FINA.3110 Introduction to Financial Statement Analysis (Formerly FINA/61.303) - Credits: 3
The techniques of financial analysis in depth. Topics covered include cash management, credit scoring, receivables monitoring, inventory management, financial statements analysis and forecasting, financial distress prediction, mergers and acquisitions techniques and other selected topics.

FINA.3210 Investment and Portfolio Analysis (Formerly FINA 321/61.304) - Credits: 3
This course is a survey of investments for business students. Topics include the investment environment, markets and instruments, securities trading, market indexes, risk, diversification, the capital asset pricing model, market efficiency, introductory valuation of bonds stocks options and futures, mutual funds, behavioral finance, and strategies for individual investors. Meets Core Curriculum Essential Learning Outcome for Critical Thinking &Problem Solving (CTPS) and Information Literacy (IL).

FINA.3310 Principles of Corporate Finance (Formerly FINA 331/61.431) - Credits: 3
Advanced study of the principles of financial analysis. Covers topics such as acquisition of long-term assets, capital budgeting models, and the analysis of mutually exclusive projects.

FINA.3320 Credit Risk Analysis (Formerly 61.332) - Credits: 3
This course introduces students to credit risk analysis approaches used by commercial banks to evaluate loan applications. Topics covered include understanding customer business and company life cycle, cash flow analysis using loan applicant financial statements, loan structuring, tax issues, and loan documentation. The course uses a combination of lecture and cases, with emphasis on the use of spreadsheets for case analysis.

FINA.4110 Financial Institutions And Markets (Formerly FINA.411) - Credits: 3
This course will focus on the Institutions that facilitate the flow of money, examine the types of instruments used globally, and provide an understanding of some of the regulation and oversight required to ensure stability. In addition, the course reviews determinants and structure of interest rates and bond prices and examines some of the risks incurred by financial institutions such as interest rate risk and credit risk.

FINA.4210 Introduction to Financial Risk Management - Credits: 3
This course will review the basic concepts of risk measurement and risk management. We will review the nature of risk and the various dimensions of risk that an effective risk management program must address. The principal focus in the latter part of the course will be on risk management in the financial services industry. We will survey some of the practices and tools current in this industry along with their strengths and shortcomings. We will also review how firms organize their risk management functions and, importantly, the impact of the principal regulatory regimes on the risk management practice.

FINA.4220 Portfolio and Security Analysis (Formerly
FINA 422/61.421) - Credits: 3
Advanced course on investment theory and applications. Topics covered include stock market behavior, portfolio and capital market theories, and securities analysis.

FINA 4230 Student Managed Fund (Formerly FINA 423/61.434) - Credits: 3
A course focused on application of investment theory. Topics covered include stock market behavior and securities analysis.

FINA 4320 Intermediate Corporate Finance (Formerly FINA 432/61.433) - Credits: 3
This course builds on financial decision-making concepts covered in the Corporate Finance course. Some of the topics covered in the course include financial restructuring, mergers and acquisitions, different forms of debt and equity financing, leasing, and real options.

FINA 4410 Introduction to Financial Derivatives (Formerly FINA 441) - Credits: 3
This course is an introduction to financial derivatives. The primary emphases are the valuation and practical application of these instruments for both hedging and speculation. Topics include the characteristics of options, forward contracts, futures, and swaps; arbitrage and the valuation of derivatives; creating value and profit diagrams; and the structure of the derivatives markets. Ethical and economic issues associated with the use of derivatives as reported in the current financial press will also be covered.

FINA 4550 Financial Regulation, Compliance, and Ethics - Credits: 3
This course will provide: 1) an introduction to ethical standards held to be best practices in the financial services industry; 2) a survey of some of the major regulatory regimes within which this global industry operates; and, 3) exposure to principles and procedures for establishing and maintaining an effective compliance regime consistent with good ethical practice and regulatory compliance. The course will rely heavily upon examination of real-world examples in the application of the principles surveyed.

FINA 4890 Internship In Finance (Formerly FINA 489/61.489) - Credits: 3
Opportunity for students to earn academic credit through the integration of professional on-the-job experience and related academic work. Project jointly supervised by a faculty member and representative of the employing organization.

FINA 4910 International Finance (Formerly FINA 491/61.491) - Credits: 3
Financial aspects of international business operations. Evaluation of risks associated with multinational operation and managerial decision making under conditions of financial uncertainty.

FINA 4970 Independent Study Finance (Formerly FINA 497/61.499) - Credits: 1-6
An opportunity for students to carry out individualized study relating to the field of finance under the supervision of a member of the faculty.

FINA 4980 Special Topics in Finance (Formerly FINA 498/61.479) - Credits: 3
This course introduces Python programming to students using examples from finance. The necessary finance/mathematics information will be introduced as necessary to complete exercises that include creating algorithms for financial models for valuing stocks and bonds and evaluating the risk and return characteristics of individual assets and portfolios. It does not require any previous programming knowledge.
MGMT.1010 First-Year Management Seminar - 2
(Formerly MGMT/66.101) - Credits: 1

The purpose of the First-Year Management - 2 (FYMS - 2) is to deepen students understanding and appreciation of the functional areas within the College of Management along with their understanding of themselves as learners in the College. This will be accomplished through the administration of self-assessment tools such as the Myers Briggs Type Indicator (MBTI), participation in an online business simulation addressing the business functional areas and through participation on in-class and virtual teams.

MGMT.1CO-OP Curricula Practical Training
(Formerly 66.1CO-OP) - Credits: 0-1
Curricula Practical Training. "Variable credit course, student chooses appropriate amount of credits when registering."

MGMT.3010 Organizational Behavior (Formerly MGMT/66.301) - Credits: 3

Examination of individuals, groups, and organizations from a behavioral and structural perspective. Topics include employee motivation and satisfaction, communication, power and politics, the dynamics of groups and teams, conflict management, and organizational design and change.

MGMT.3100 Human Resources Management
(Formerly MGMT/66.310) - Credits: 3

Current issues in the management of human resources. Recruitment, selection, work force training and development, reward systems, employee health and safety, legal issues, managing diversity, performance evaluation, and human resource planning.

MGMT.3800 Business Ethics (Formerly BUSI 380/3800) - Credits: 3

This course will explore the intersection between business leadership and ethics in various context. It provides the opportunity for students to explore complex issues in societal and professional contexts while engaging in probing conversations with classmates.

MGMT.4100 Negotiation Strategy and Process
(Formerly MGMT/66.410) - Credits: 3

Analysis and application of the key factors that shape and characterize different negotiation situations; the analytical skill to diagnose potential areas of difference and select appropriate strategies to address them; the interpersonal skills to tactically manage the specific communication and decision-making behaviors during the actual bargaining; and the ability to recognize how one's own personality, value system and perceptions affect the choice of tactics and behavior.

MGMT.4150 Managing Teams and Projects
(Formerly MGMT/66.415) - Credits: 3

Provides students with the knowledge and skills to effectively manage in the more flexible, team-oriented environments increasingly found in contemporary organizations. Emphasis on the dynamics of groups and how they are transformed into productive teams; strategies for systematic goal setting; building team structure; using the team as a basis for problem-solving; facilitating team processes. The course focuses on today's smaller, "self-renewing" organizations, as well as on more traditional work group settings.

MGMT.4200 Leadership Processes (Formerly MGMT/66.420) - Credits: 3

Examines leadership as a dynamic influence process in organizations. The role of leader characteristics and styles, matching leadership behavior and situations, issues in power and politics, empowerment and participation, conditions for leadership effectiveness. Meets Core Curriculum Essential Learning Outcome for Information Literacy (IL).

MGMT.4250 Business Process Management - Credits: 3

Business Process Management (BPM) addresses the foundational concepts, tools and methods involved in the identification, design, redesign, and measurement of key business processes. The goal of BPM is to eliminate non-value added steps in business activities (e.g., reducing cycle times and costs), Thus improving organizational efficiencies and productivity, and providing more quality products to customers in a timelier manner. Business interrelated processes that span horizontally across functional boundaries and, in a global economy, are often connected across geographies. Students will learn the difference between a vertical functional view and horizontal process view; what process ownership entails; and what specific activities are required for successful BPM implementation. Both quantitative approaches are covered.

MGMT.4300 Managing Change - Credits: 3

The ability to execute appropriate and timely change is often a key measure of success for individuals and organizations. This course helps students develop skills to innovate, lead and successfully implement sustainable change at the individual, group and organizational levels. Students acquire capabilities as change agents, including identifying change opportunities,
objectives and potential pitfalls to navigate change throughout their careers. Relevant change management experience is cultivated through individual and group exercises and projects. Specific issues addressed include problem diagnosis, gaining and leveraging influence, managing resistance to change, and evaluating organizational factors such as culture, structure and incentives that influence behavior in change contexts.

MGMT.4350 International Management (Formerly MGMT/66.435) - Credits: 3

Comparison of management concepts, systems and practices in different societies, and institutional settings. The impact of economic, social, political, and cultural variables on management styles, processes and organizational structures.

MGMT.4400 International Business (Formerly MGMT/66.440) - Credits: 3

Ninety-five percent of the world's customers, 80 percent of the world's fastest-growing markets are outside the United States. Thus, it is not surprising that business has become global. Therefore, learning about international business and its unique challenges are an important part of a business education. The course will first address the concept of globalization, the international business environment, and the foreign national business environment, including the variety of cultures and different economic, political, and legal systems around the world. The course will then focus on international business management, including how to analyze global business opportunities, create a strategy and choose entry modes, and how to market, operate, and manage international companies. We will consider a wide variety of regions and countries, and industries and companies of all sizes including recent successful global start-ups.

MGMT.4450 Contemporary Management Development (Formerly MGMT/66.445) - Credits: 3

Provides students the opportunity to develop the skills and capabilities needed to select, gather, synthesize and use new information to enhance their professional growth and development.

MGMT.4500 Managing Diversity in Organizations (Formerly MGMT/66.450) - Credits: 3

This course explores the opportunities and challenges of working within an increasingly diverse workforce. Examines the knowledge and skills that employees and managers must develop to diagnose and address diversity-related conflicts and dilemmas and to leverage differences and commonalities as a catalyst for organizational learning and effectiveness. Special attention is paid to the effect of gender, socioeconomic, and racial diversity on individuals, work groups, and the organization as a whole.

MGMT.4550 International Import/Export Management - Credits: 3

International trade and globalization has grown significantly over the last century, and importing and exporting of goods and services has become increasingly complex. This comprehensive course emphasizes real-world applications of international trade concepts and processes. Strategies and guidelines for how to successfully manage and control regulatory compliance issues in business is addressed. Topics covered include optimizing your compliance department, international trade terminology, procedures and documentation, regulatory controls and licenses, classification and valuation, country of origin, trade agreements, and global customs considerations.

MGMT.4800 Current Topics in Management (Formerly MGMT/66.480) - Credits: 3

Topics of current interest in management. Subject matter to be announced in advance. For a current semester course title, please log on to SIS, the Student Information System. Please see "notes" for the class to see the full description for individual topics.

MGMT.4890 Internship In Management (Formerly MGMT/66.489) - Credits: 3

Opportunity for students to earn academic credit through the integration of professional work experience with related academic work. Project jointly supervised by a faculty member and representative of the employing organization.

MGMT.4900 Strategic Management (Formerly MGMT/66.490) - Credits: 3

An integration of knowledge in the various functional areas of management toward solution of problems affecting the character and success of the total enterprise. Corporate strategy and its implementation via appropriate policies.

MGMT.4910 Independent Study in Management (Formerly MGMT/66.491) - Credits: 1-6

An opportunity for the student to carry out individualized study relating to the field of management under the supervision of a member of the faculty.
ENTR.1000 The Freshmen Difference Maker Seminar (Formerly BUSI.1000) - Credits: 1

This seminar is designed to provide Business students with an opportunity to explore how their business school education can make a difference in the world through innovative and entrepreneurial action. We will examine social, environmental and economic problems in our community while learning about the University's own entrepreneurial ecosystem.

ENTR.1500 Introduction to Entrepreneurship and Business - Credits: 3

Entrepreneurship can be considered a process of economic or social value creation, rather than the single event of opening a business. This course focuses on creativity, innovation, problem identification, opportunity recognition, developing solutions, and resource acquisition. The functional areas of business and the cross-functional nature of these will be demonstrated as student teams will address problems they discover.

ENTR.3000 Principles of Innovation and Entrepreneurship (Formerly ENTR/64.300) - Credits: 3

Course number was formerly 64.300. This course is designed to help non-business students understand the importance of innovation and entrepreneurship in today's global economy and cultivate an entrepreneurial mindset among students in the Manning School of Business entrepreneurship concentration. It will cover different forms of entrepreneurship such as small businesses, growth ventures, corporate entrepreneurship and social entrepreneurship. The course will focus on the types of innovation, turning innovation into an ongoing new venture and on the entrepreneurial process. Innovation and entrepreneurship theories and concepts will be discussed with real life examples and cases.

ENTR.3610 Starting a New Venture (Formerly ENTR/64.361) - Credits: 3

This course is designed for students with a curiosity and interest in starting a new business. In this course, students will explore the entrepreneurship process including how entrepreneurs discover and evaluate the sources and opportunities for new business ventures; how they assemble the resources, how they operate and grow a new business; and finally how they harvest their hard work as successful entrepreneurs. The course covers a variety of topics associated with launching and running a new business venture, such as marketing, financing, building the venture team, legal and regulatory issues, and social and environmental issues. Meets Core Curriculum Essential Learning Outcome for Critical Thinking &Problem Solving (CTPS).

ENTR.3620 Corporate Entrepreneurship (Formerly ENTR/64.362) - Credits: 3

This course focuses on entrepreneurship in established companies. In order to compete in today's dynamic business environment, organizations need to spur and promote entrepreneurial thinking and actions as a way of remaining innovative and competitive. Thus, the course explores how the entrepreneurship process works within an existing organization, including the identification of strategies companies engage to rejuvenate their business, markets and industries. Students will also study how individuals can play a role in promoting entrepreneurial activities in their organizations.

ENTR.4100 Global Entrepreneurship and Innovation - I (Formerly ENTR /64.410) - Credits: 3

The Course is offered as a 2-week intensive experiential learning of Global Entrepreneurship and Innovation. It is designed to help students to understand the importance of entrepreneurship and innovation in today's global economy and to cultivate an entrepreneurial mind-set among the students in the UMass Lowell. Students will work in interdisciplinary, multi-cultural environments exploring problem solving techniques, opportunities identification, business concept development &venture planning using standard business model framework and bringing ideas to reality.

ENTR.4110 Global Entrepreneurship and Innovation - II (Formerly ENTR /64.411) - Credits: 3

The Course is offered as a 2-week intensive experiential learning of Global Entrepreneurship and Innovation. It is designed to help students to understand the importance of entrepreneurship and innovation in today's global economy and to cultivate an entrepreneurial mind-set among the students in the UMass Lowell. Students will work in interdisciplinary, multi-cultural environments exploring problem solving techniques, opportunities identification, business concept development &venture planning using standard business model framework and bringing ideas to reality.

ENTR.4200 Leading Successful Entrepreneurial Team - Credits: 3

The focus of this course is to enable students understand the importance of entrepreneurial team characteristics (demographic, functional and cognitive) and dynamics on team success as well as entrepreneurial leadership in the new venture setting. Students will have opportunities to understand their own entrepreneurial mindset profile and learn to work with team members with heterogeneous entrepreneurial styles and
preferences. Working together as entrepreneurial teams, students will identify innovative and proactive solutions to various problems while learning to manage risk effectively.

ENTR.4630 Managing Innovation (Formerly ENTR /64.463) - Credits: 3

A critical issue for entrepreneurs and managers is how to translate opportunity into competitive advantage. This course examines theories of innovation and their application to real-world business opportunities. A particular focus is placed on emerging scientific and technical innovations and the opportunities and challenges they present to both existing businesses and new venture entrepreneurs. Students examine innovation strategies, planning models, evaluation models, licensing and the commercialization process required to launch new businesses around innovative products and technologies.

ENTR.4640 Finance for Emerging Business Enterprises (Formerly ENTR /64.464) - Credits: 3

Course content covers financial aspects of an entrepreneurial venture from its start to a potential sale. Major sources of financing covered in the course include venture capital, private placement, bank credit, and public financing. Other financial concepts covered include organization of the business, financial forecasting, financial analysis, firm valuation and acquisitions.

ENTR.4800 Current Topics in Entrepreneurship (Formerly ENTR /64.480) - Credits: 3

Topics of current interest in entrepreneurship. Subject matter to be announced in advance. For a current semester course title please log on to SiS, the Inter-Campus Student Information System.

ENTR.4890 Internship in Entrepreneurship (Formerly ENTR /64.489) - Credits: 3

Opportunity for students to earn academic credit through the integration of professional work experience with related academic work. Project jointly supervised by a faculty member and representative of the employing organization.

ENTR.4960 Entrepreneurship Strategy Implementation (Formerly ENTR /64.496) - Credits: 3

The Course focuses on innovation and entrepreneurship utilizing experiential learning and venturing projects. It will deal with ideation methods and tools, technology commercialization, business planning and potential initial incubation of an early-stage business by project teams, and the development of an investment proposal to launch a new business. Students will be exploring, identifying and analyzing the path from Idea to Market for technology projects.

ENTR.4991 Independent Studies (Formerly ENTR 499) - Credits: 1-3

MKTG.1CO-OP Curricula Practical Training - Credits: 0-1

Curricula Practical Training. "Variable credit course, student chooses appropriate amount of credits when registering."

MKTG.2100 Professional Communications (Formerly MKTG 210/66.210) - Credits: 3

This course provides students with the theory and practice of successful oral and written communication in business. Emphasis is on the development and improvement of communication skills needed for today’s fast-paced organizations. Such skills include written communication in short memos and reports, including the use of conferencing technology to convey information. Additionally, the course focuses on oral communication through presentations and discussions as well as the use of current presentation software.

MKTG.3020 Marketing Research (Formerly MKTG 302/62.302) - Credits: 3

Analysis of the information gathering function of marketing management. Design, execution and evaluation of marketing research.

MKTG.3100 Digital Marketing - Credits: 3

This course presents an overview of the growing field of digital marketing and offers opportunities for acquiring technical skills of performing vital daily marketing functions. Through case studies, interactive sessions, and online simulation, class exercises, and/or client projects, students learn about the latest research and best practices in the industry. Topics covered include search engine optimization, search engine marketing, online marketing, web analytics, email marketing, social media marketing, mobile marketing, legal and security issues, and online reputation management. Students will leave the course with working knowledge of the tools and processes for

MKTG.3200 Marketing Management (Formerly MKTG 320/62.320) - Credits: 3

This course is designed to introduce students to the fundamental concepts and strategies of marketing management. Through case studies, interactive sessions, and online simulation, class exercises, and/or client projects, students learn about the latest research and best practices in the industry. Topics covered include search engine optimization, search engine marketing, online marketing, web analytics, email marketing, social media marketing, mobile marketing, legal and security issues, and online reputation management. Students will leave the course with working knowledge of the tools and processes for
creating, managing, and executing digital marketing plans.

**MKTG.3130 Sales and Customer Relations (Formerly MKTG 313/62.313) - Credits: 3**

Focuses on the concept of customer value, operating decisions in sales, customer service, and account management. Focus is given on calculating the value of a good or service to the customer, professional selling and sales forecasting, retail and wholesale operations, purchasing, and logistics.

**MKTG.3150 New Product & Service Management (Formerly MKTG 315/62.315/62.311) - Credits: 3**

Course number was formerly 62.311. Focuses on the process of new product &service development and marketing. Emphasis is given on market opportunity identification, R&Dmarketing interface, business model development, market potential estimation, and market entry timing.

**MKTG.4010 Advertising (Formerly 62.401/MKTG.401) - Credits: 3**

Evaluation of various marketing communication methods, including sales promotion and public relations, with an emphasis on advertising. Research, copy writing, scheduling and budgeting from the viewpoint of the marketing manager.

**MKTG.4020 Buyer Behavior (Formerly MKTG 402/62.402) - Credits: 3**

Applications of behavioral theories and techniques to the understanding of consumer and organizational purchasing processes.

**MKTG.4070 Retailing (Formerly MKTG 407/62.407) - Credits: 3**

This course examines the strategic role of retailing in the distribution of consumer goods and services. Students will gain insights into retailing concepts and practices and will develop skills for building sustainable competitive retail strategies. Key topics include retail formats, retail mix, retail market strategy, integrated retail communication, and customer service, with a focus on new trends and technologies in retailing and electronic retailing such as multichannel/omnichannel retailing, electronic/mobile retailing, social media, and global retailing. This course is designed to provide a foundation for those students interested in pursuing a retail career or in owning/running a retail or e-tail business. Experiential assignments are used to apply the concepts.

**MKTG.4110 Marketing Analytics (Formerly MKTG 411/62.411/62.312) - Credits: 3**

Course number was formerly 62.312. Focuses on marketing strategies and tactics. Emphasis is given on research methods and applications for strategy building and implementation. Meets Core Curriculum Essential Learning Outcome for Critical Thinking &Problem Solving (CTPS) and Quantitative Literacy (QL).

**MKTG.4120 Global Marketing (Formerly MKTG 412/62.412/62.303) - Credits: 3**

Course number was formerly 62.303. Focuses on the marketing aspect of global business. Emphasis is given on cultural dynamics and economics as well as political, social and regulatory constraints as they affect the global marketing practice and strategy implementation. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

**MKTG.4300 Social Media Marketing - Credits: 3**

This course presents how social media should be effectively used as a digital communication tool in diverse business contexts. Emphasis is placed on the effective uses of social media for enhanced customer relationship building and brand equity. Topics include PR campaigns on social media, risk management, social entertainment, social commerce, online reputation management, and content marketing.

**MKTG.4960 Current Topics in Marketing (Formerly MKTG 496/62.496) - Credits: 3**

Topics of current interest in Marketing. Subject matter to be announced in advance. For a current semester course title, please log on to ISIS, the Inter-Campus Student Information System.

**MKTG.4970 Senior Seminar - Credits: 3**

**MKTG.4980 Marketing Internship (Formerly MKTG 498/62.498) - Credits: 3**

Specific projects undertaken by senior marketing students under joint supervision of department internship coordinator and representative from the business organization hosting the internship. Enrollment restricted to marketing seniors selected by internship coordinator. P/NC (free elective credit) only.

**MKTG.4991 Independent Study in Marketing (Formerly MKTG 499/62.499) - Credits: 3**

An opportunity for the student to carry out individualized study relating to the field of Marketing under the supervision
of a member of the faculty
MIST.2010 Business Information Systems (Formerly 63.301: Management Information Systems, MIST 201) - Credits: 3

The course familiarizes students with key components and principles of information systems and information technology. Students will learn about the role of IS/IT in businesses for improving organizational performance, competing globally, and gaining competitive advantage. The course covers basic principles and technologies pertaining to information management, business intelligence, and business analytics for improving decision-making and managing knowledge. The basic role of enterprise systems in businesses for enabling operational excellence is also discussed. Social and ethical issues associated with the use of information systems are also discussed. Students will utilize IS technologies (e.g., spreadsheet and database software) in a hands-on manner for business problem-solving.

MIST.3030 Database Management Systems
(Formerly 63.303, MIST 303) - Credits: 3

An introduction to databases and Database Management Systems (DBMS). Topics include basic concepts of database technology, an introduction to SQL, techniques for logical and physical database design, interaction with a commercial DBMS, and data warehousing.

MIST.3040 Data Communications and Networks
(Formerly 63.404, MIST 304) - Credits: 3

A comprehensive overview of concepts and practice in Business Data Communications and Networking. Explores the principles and applications of data communications in organizations from familiar applications into the more technical aspects of telecom architecture. Analyzes the various types of telecom networks, and how they are designed and configured, including issues involving the management and decision-making process within the telecom department. Students provided with hands-on network administration and configuration experience with a LAN administrator. Meets Core Curriculum Essential Learning Outcome for Quantitative Literacy (QL).

MIST.3050 Business Applications Development
(Formerly 63.330: Application Systems Development, MIST 305) - Credits: 3

Introduction to programming and computing. Topics include fundamental programming constructs, data structures, and object orientation. Through hands-on exercises to build business applications, students will learn programming concepts, software development principles, and computational problem-solving skills. Meets Core Curriculum Essential Learning Outcome for Critical Thinking & Problem Solving (CTPS).

MIST.3070 Web Development in MIS (Formerly 63.408 Current Topics in MIS, MIST 307) - Credits: 3

This course addresses one or more current topics to the field of Information Systems. Topics can change at each course offering. Typically, the course will focus on an emerging information technology, discussing fundamental concepts and the technology's application to and effect on business. Examples of possible topics are expert systems, hypermedia and hypertext systems, factory automation systems, and the planning for and management of information resources. Subject matter to be announced in advance. Visit the current semester schedule on the Continuing Studies website for more details.

MIST.4020 Systems Analysis and Design (Formerly 63.307, MIST 402) - Credits: 3

An overview of the information system and systems development life cycle (SDLC). Emphasis on tools and techniques that analyst can use to document information systems. Current, classical and structured tools for describing data flow, data structure, process flow, file design, input and output design and program applications will be discussed.

MIST.4060 Data Mining for Business Intelligence (formerly 63.406: Decision Support Systems) - Credits: 3

This course introduces the concepts and techniques of data mining and analytics for transforming raw data into business intelligence and insight. It is intended to provide the students with the working knowledge for using and developing data mining technologies. The course studies how data-oriented business intelligence techniques can be used by organizations to gain competitive advantages. Topics include data integration, data transformation, Big Data Analytics, classification, prediction, clustering, association analysis, and text mining. Data-mining related ethical issues will also be discussed.

MIST.4070 Electronic Business (Formerly 63.407, MIST 407) - Credits: 3

This course familiarizes students with current and emerging electronic commerce technologies using the Internet. Focus is on both Web Design and E-Business. The web design portion provides a foundation for designing dynamic interactive websites for electronic commerce. It addresses planning and developing well-designed websites that combine effective navigation with the balanced use of graphics, text, color, and
database access. The electronic business section covers both the theory and practice of doing business over the Internet including issues relating to Internet technology for business advantage; managing electronic commerce funds transfer; reinventing the future of business through electronic commerce; business opportunities in electronic commerce; electronic commerce website design; social, political and ethical issues associated with electronic commerce; and business plans for technology ventures.

MIST.4080 Enterprise Systems Management (Formerly 63.308, MIST 408) - Credits: 3

This course, a MIS elective, focuses on implementation of Enterprise Resource Planning systems (ERPs) and its impact on business change process in organizations. ERPs integrate information and applications, spanning the functional boundaries within an organization. The goals of the course are to help students understand ERP systems and their underlying components and technologies, and the business change process with ERP in organizations. The course covers people and technical issues during the pre-implementation, implementation and post-implementation stages of the ERP systems life-cycle.

MIST.4090 Directed Study in Management Information Systems (Formerly 63.409, MIST 409) - Credits: 3

MIST.4880 Current Topics in Management Information Systems (Formerly 63.498, MIST 488) - Credits: 3

Selected topics having current and future impact in the field of MIS. Subject matter to be announced in advance. Contact the course instructor for topic details.

MIST.4890 Internship in Management Information Systems (Formerly 63.489, MIST 489) - Credits: 3

Opportunity for students to earn academic credit through the integration of professional work experience with related academic work. Project jointly supervised by a faculty member and representative of the employing organization.

POMS.3010 Operations Management (Formerly 63.371/POMS 301) - Credits: 3

Principles of production/operations management. Nature and function of production systems; operational planning and control; plant layout; materials handling; inventory and quality control.

POMS.4010 Logistics and Transportation (Formerly 63.469/POMS 401) - Credits: 3

This case-based course will examine methods and strategies for managing and controlling material movement, with particular emphasis on international operations, from the purchase of production materials to the control of work in process to the distribution of the finished product. Strategies that will be discussed include the design of international distribution networks, the use of third-party logistics providers, and the creation of links between logistic systems and marketing to create competitive advantage. The course will also explore tactical issues that must be managed to pursue a logistics strategy successfully, including choices regarding means of transportation, packaging, and inventory policies. Underlying themes of the course will be the use of information technologies (such as electronic data interchange and bar coding) and mathematical models to support logistics decision-making.

POMS.4020 Global Supply Chain Management (Formerly POMS 402/63.402) - Credits: 3

A supply chain consists of all of the activities and organizations required to produce and deliver a good or service from raw materials to the final end user. Global Operations and Supply Chain Management (GOSCM) involves the coordination of this complex network of organizations and flows of materials, funds, and information among and between the stages of a supply chain. GOSCM integrates the traditional business functions of operations, marketing, logistics, finance, and information systems in an international business context. The course traces the flow of products and services from development through delivery to the final user and will address topics such as global sourcing strategies, managing demand and supply uncertainties distribution strategies and logistics network design for global operations, global strategic alliances, and the role of information technology and Enterprise Resource Planning (ERP) in managing global supply chains. Meets Core Curriculum Essential Learning Outcome for Applied & Integrative Learning (AIL) and Information Literacy (IL).

POMS.4030 Service Management (Formerly POMS 403/63.470) - Credits: 3

Introduction to quantitative methods for analyzing business problems. Analytic methods include decision analysis, linear programming, queuing and simulation. Applications address issues in areas such as marketing, production, finance and logistics.
This course is intended to provide students with the necessary tools and understanding for managing service operations. Service firms represent the fastest-growing sector of the economy. This course will focus on the various aspects involved in the management of service operations. The service operations are managed differently to their intangibility, time-sensitivity, high levels of customer involvement and lack of engineering standards. This course will explore topics such as design and delivery of services, the measurement of productivity and quality, managing capacity and demand, redesign of service delivery processes, management of technology, and others.

POMS.4040 Managerial Quality Control (Formerly 63.471/POMS 404) - Credits: 3

Views quality control from the total or company-wide perspectives. It contains traditional material on statistical process control (SPC), quality cost, quality assurance, quality information systems, as well as the recent management theories and ideas of Deming, Jurand, Ishikawa, and Taguchi.

POMS.4050 Predictive Data Analytics - Credits: 3

The main objective of this course is for the students to develop an understanding of the role of predictive analytics in direct support of managerial decision-making commonly referred to as data analytics, and how they relate to other types of business analytic methodologies. Topics to be covered include logistic regression, data mining, regression prediction, classification prediction, artificial neural networks, sensitivity analysis, information fusion, and combining forecasts form different models. Data analytic enabling software packages will be used including some hands-on capabilities.

POMS.4060 Simulation and Optimization for Business Analytics - Credits: 3

Uncertainty manifests itself in most business dataset. Descriptive analytics tools help us explain the nature of the uncertainty that we have experienced, while predictive analytics tools further aid us in estimating outcomes for any given set of predictors. In this course, we cover simulation and optimization as prescriptive analytics methodologies. They take descriptive and predictive analytics results as input, helping us make managerial decision under such uncertainty. They are the art and science of creating and analyzing a model of real-world systems. This course covers business process design and analysis, simulation and optimization model development, and discrete-event simulation software application.

POMS.4090 Directed Study in Operations Management (Formerly 63.479/POMS 409) - Credits: 3

Topics of current interest in operations management. Subject matter to be announced in advance.

POMS.4890 Internship in Operations Management (Formerly 63.490/POMS 489) - Credits: 3

Opportunity for students to earn academic credit through the integration of professional work experience with related academic work in Operations Management. A project, jointly supervised by a faculty member and representative of the employing organization with mutually defined objective(s), will be completed by the Student. An approved report in written form will be submitted to the supervising faculty member.
AEST.2210 20th Century Art (Formerly 79.221) - Credits: 3

A study of American and European movements in painting, sculpture, and architecture from 1900 to the present. Emphasis is placed on Fauvism, Cubism, Expressionism, Surrealism, International Style, Pop, Op Art, Minimal Art, Photorealism, and Post-Modernism.

AEST.2250 History of Photography (Formerly 79.225) - Credits: 3

Less than 200 years old, photography seems to span millennia. With 1839 as the invention's launch date, there is no photograph of George Washington, but very soon we are flooded with the faces of composers, painters, and presidents: we know and are reminded of the ravages of civil and world wars, industrial progress and social injustice, or the beauty of pristine landscapes and their ecological demise. In this course, students will become familiar with some 100 notable photographers, from the beginning years of its invention to contemporary times with works by major artists and forgotten visionaries, all serving as a foundation for inspiration and understanding of the art worlds most visible medium. Grading in the course is based on a mid-term and final exam along with a major research paper.

AEST.2310 Aesthetics and Critical Studies Seminar (Formerly 79.231/490) - Credits: 3

The Aesthetics and Critical Studies Seminar introduces a wide variety of artists, designers, images, concepts, movements and theories. The objective of this course is to improve critical awareness and provide a theoretical background to art and design studio courses. Topics to be announced. Course may be repeated.

AEST.2410 Art Serving Political, Religious, & Social Needs (Formerly 79.241) - Credits: 3

The objectives are to study the production of meaning in paintings and frescos, sculpture, stained glass, architecture and other art forms that were commissioned through the church and state patronage system; to analyze how these images are used to represent and define social order; how these images support the patron's interpretation of history while appealing to aesthetic needs; and ways in which art supported the educational and evangelical aims of church and state. The course will introduce students to the visual and critical language of art produced at this time and analyze works in the context of contemporary history. The thematic focus of this class is designed for Italian cultural studies. No knowledge of Italian is required.

AEST.2800 From Collective to Personal Aesthetics (Formerly 79.280) - Credits: 3

This course is an exploration in aesthetics and culture. The seminar examines a variety of works by contemporary artists and designers; and also introduces important texts by philosophers, art theorists, and critics. Throughout the semester, student will study current trends in visual studies. They will examine a range of works form popular culture to high art and respond to various readings through class discussions and papers. In addition, the course will facilitate intellectual engagement with ones own visual work. Through their research, student will explore the connections between their work and that of other artists and designers. They will situate their artwork within the field of criticism, creating a bridge across the traditional divide between theory and practice.

AEST.3600 Aesthetics and Critical Studies of Graphic Design (Formerly 79.360) - Credits: 3

Examination of the aesthetic theories and practice of graphic design. Significant practitioners of the art will be highlighted.

AEST.3620 Post-digital Aesthetics - Credits: 3

Post-digital Aesthetics explores art after the digital revolution focusing on critical analysis of digital images and environments. We will study how digital technology has transformed art making and also how it impacts the very definition of art. The blurring of boundaries between art, life and design is more than ever evident as human experiences are increasingly mediated through technological devices and high-quality design. The internet has dramatically altered how and why we make art while virtual presence and embodiment in VR bring unprecedented questions about the role of artists and designers in our understanding of the world. This course will be taught as a face-to-face seminar. However, we will also travel beyond the classroom walls into virtual worlds and environments.

AEST.3800 Understanding Movies: Cinema as Social Commentary (Formerly 79.380) - Credits: 3

This film theory seminar has several main objectives: to study the production of meaning in films; to analyze how moving images are used in social representation; and to introduce students to the visual and critical language of cinema. In this course, we will view a series of films by international authors. These address some of the most pressing issues of today's global world such as identity, subjectivity, difference and otherness, race relations, representations of gender and sexuality, immigration, war, colonialism and post-colonialism, poverty, and social inequalities. The films that we watch will be studied not as isolated cinematic texts but as illustrations
and examples of theories of representation. Students will develop their critical analysis skills by being introduced to theoretical concepts such as "the gaze" in art and cinema as well as formal elements such as mise-en-scene, cinematography, editing, and sound.

AEST.4900 Aesthetics and Critical Studies Seminar (Formerly 79.231/490) - Credits: 3
The Aesthetics and Critical Studies Seminar introduces a wide variety of artists, designers, images, concepts, movements and theories. The objective of this course is to improve critical awareness and provide a theoretical background to art and design studio courses. Topics to be announced. Course may be repeated.

AEST.4940 Directed Study in Aesthetic Concepts (Formerly 79.494) - Credits: 3
An individual supervised research project relating to questions of aesthetic interpretation and understandings. Fall and Spring.

AEST.4960 Practicum Experience in Aesthetic Concepts (Formerly 79.496) - Credits: 3
A program of on-campus and/or off-campus experiences for art majors only. Specific requirements will vary depending upon department policies and the nature of the program undertaken by the student. The intent of the practicum experience is to provide an occasion for investigation of a community, social, cultural or artistic area and for applying techniques of problem solving and/or credits. Students will be graded "satisfactory" or "unsatisfactory". Fall and Spring.

AMST.2480 Perspectives American Culture (Formerly 40/42.248) - Credits: 3
The goal of this class is to enhance students’ ability to read and interpret American texts by learning how to see them in context, to understand the way readers approach texts from interpretative lenses, and to express their insights about American culture in a variety of forms and genres. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA) and Social Responsibility &Ethics (SRE).

AMST.2570 The Family in American Literature (Formerly 40.257) - Credits: 3
A study of literary selections dealing with traditions of family life, the individual, and social change. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

ARHI.1010 Art Appreciation (Formerly 58.101) - Credits: 3
The course introduces the student to the technical, aesthetic and historical aspects of architecture, sculpture, and painting. An analysis of the visual elements used in fine arts such as color, line, shape, texture, and principles of design are developed through slide lectures, museum visits and assigned readings. In addition, students investigate the purposes of art and visual communication and develop a heightened sense of critical thinking that allows them to investigate successfully different modes of representation, styles and media in a multicultural society.

ARHI.1050 Comparative Arts (Formerly 58.105) -Credits: 3
This course studies the aesthetic, artistic and intellectual similarities between art history and music history. Discussion of the arts focuses on the development in examining the human creativity and expression through the arts: from ancient times as art and morality followed in the Renaissance as art and sciences continued in the Enlightenment as art and society contrasted in the nineteenth century as art and entertainment. Furthermore, this course surveys some of the fundamental aspects of music and art, such as the nature of aesthetic judgment, the task of art and music criticism, including formalist, representational, and contemporary theories on viewing, analyzing, and interpreting the arts. In addition, with a comparative analysis between the modes of visual and aural representation, visual and aural perception, this course analyzes the principal forms and genres of the visual and aural elements of art history and music history, providing an understanding for human creativity and expression. Spring, alternate years.

ARHI.2030 History of Art I: Prehistoric to Medieval Art (Formerly 58.203) - Credits: 3
A survey of the origins of painting, sculpture, and architecture from the prehistoric period through approximately 1300 CE. Works of art are discussed in their historical, cultural, and artistic contexts.

ARHI.2040 History of Art II: Renaissance to Modern Art (Formerly 58.204) - Credits: 3
A survey of the origins and development of painting, sculpture, and architecture from Renaissance times to the Modern period. Emphasis is placed on representative works of art from the Renaissance, Baroque, Rococo, Nineteenth Century Movements-Neoclassicism, Romanticism, Impressionism, Cubism, Dadaism, Surrealism and Abstract Art. The aim of the course is to introduce the student to basic critical and art
historical methods as well as the analysis of style and content within sequential cultural contexts.

ARHI.2060 History of Architecture (Formerly 58.206) - Credits: 3
A survey of the major technical and stylistic developments in ecclesiastical and secular architecture from Prehistory to the present day studied with an emphasis on the major monuments (Parthenon, Pantheon, Gothic Cathedrals, St. Peter’s, Versailles Palace, Eiffel Tower, Guggenheim Museum). Spring, alternate years.

ARHI.2110 Nineteenth Century Art (Formerly 58.211) - Credits: 3
A study of the major artists and artistic movements of the 19th century. This course examines major cultural, social and political forces (e.g. class struggles, racial and gender inequalities, industrialization, scientific discoveries, emancipation, education reform, the influence of early "social media," etc.) through the lens of the visual arts and pays particular attention to how these forces impacted the way art was produced, viewed, and understood.

ARHI.2210 Twentieth Century Art (Formerly 58.221) - Credits: 3
A study of developments in painting, sculpture, performance, media arts, conceptual art, architecture, and design after 1900. This course encompasses modernisms in Europe, the Americas, Asia and the global south.

ARHI.2310 Greek and Roman Art (Formerly 58.231) - Credits: 3
A study of Greek painting, sculpture, and architecture from the Cycladic to the Hellenistic period, and an examination of Roman Art from the Etruscan age to the beginning of Christian art. Emphasis is placed on the Greek Classical period and the Roman Empire.

ARHI.3000 Art History, Music and Culture (Formerly 58.300) - Credits: 3
This course is a historical and critical examination of the aesthetic and intellectual similarities between art history, music history, literature and culture from Ancient Egypt to contemporary Art. Emphasis is placed on an in-depth exploration of western cultures. In addition, this course provides an understanding of human creativity and expression through a comparative analysis of visual art and music.

ARHI.3020 Studies In World Art (Formerly 58.302) - Credits: 3
Historical and critical examination of regions works of art from China, Asia, the Islamic world, India, Africa, North America, Latin America, Native American Art and Mexico. Topics vary from year to year. Course may be repeated.

ARHI.3130 American Art (Formerly 58.313) - Credits: 3
This course centers on the study of American painting, sculpture, and decorative arts from the period of first contact up through the mid-twentieth century. One of the central questions of American art remains its definition: when does it start? What sources does it draw upon? In this class we will discuss American art through its ties to the peoples, events, institutions, and landscape that shaped it.

ARHI.3140 American Architecture (Formerly 58.314) - Credits: 3
This course begins with a discussion of native American building traditions and proceeds chronologically from the 17th through the 20th centuries. Students will gain a familiarity with the major movements in American architecture (such as Colonial, Greek Revival, Victorian, Arts and Crafts, City Beautiful, International Style, Postmodern) as well as the leading architects such as Frank Lloyd Wright and Frank Gehry. The architecture is discussed in its historical context with attention to the inventions, materials and aesthetic assumptions that made it possible.

ARHI.3150 Modern Architecture (Formerly 58.315) - Credits: 3
This course will examine global architecture from the 19th century to the present. It addresses the major movements, "isms", architects, publications, schools, and technological innovations that contributed to varied (and often conflicting) notions of "Modern architecture." Growing nationalism and politics, travel and colonial occupation, the effects of war, and changing conceptions of nature and science, all transformed the built environment. This course will provide a better understanding not only of individual works but also of the ways architecture manifests important themes such as nationalism, regionalism, functionalism, rationalism, and the most current theme, happiness.

ARHI.3151 Islamic Art and Contemporary Society (Formerly as 59.315) - Credits: 3
This course introduces students to Islamic art through a survey of works across the broad reach of the Islamic world including...
Saudi Arabia, Northern and Saharan Africa, Spain, the former Ottoman Empire surrounding Turkey and the Greater Middle East. The last unit of the course looks at Islamic art in the diaspora. The course highlights works form c. 500 CE to the present, ending with the ultra modern city of Dubai.

ARHI.3210 Italian Renaissance Art (Formerly 58.321)  
- Credits: 3
A study of painting, sculpture, and architecture in the major artistic centers of Italy (Florence, Rome, Venice, Milan and the Northern Courts) during the 15th and 16th centuries. In addition to examining artworks by some of the most important artists of the period - Leonard da Vinci, Michelangelo, titan - this course considers larger themes raised by these works and gives attention to the conditions within which the works were originally produced and viewed.

ARHI.3230 Northern Renaissance Art (Formerly 58.323) - Credits: 3
A study of 15th and 16th century painting and sculpture north of the Alps including artists such as Jan van Eyck, Hieronymus Bosch, Jean Fouquet and Albrecht Drer. This course considers how social forces (politics, race, religion, gender etc.) influenced the manner in which Northern renaissance art was produced, viewed, and understood, as well as how these forces led to the creation of some of the most startling, strange and enigmatic images of any period in the history of art.

ARHI.3250 Studies in Latin American Art (Formerly 58.325) - Credits: 3
An introduction to the art and architecture of ancient, colonial, and modern Latin America. The course provides a framework by which students consider the complex intersections--of vision, power, history, and artistic production--in Latin American art within both local and global contexts.

ARHI.3300 Italian Mannerism (Formerly 58.330)  
- Credits: 3
A study on the impact of the High Renaissance in the sixteenth century, the subsequent development of early Mannerism in central Italy and the formation of the Proto-Baroque style in Venice and Northern Italy, the establishment of the courtly Mannerist style. The role of representative artists such as Anguissola, Pontormo, Rosso, Parmigianino, Bronzino, Beccafumi, Fontana, Vasari, Veronese, Bandinelli, Cellini, Palladio, Peruzzi and Ammanati is emphasized.

ARHI.3310 Asian Art (Formerly 58.331) - Credits: 3
The purpose of this course is to provide a general overview of the art of the traditional cultures of Asia, China, India and Japan. This survey provides a critical and historical examination of these cultures.

ARHI.3320 Baroque Art (Formerly 58.332) - Credits: 3
This course surveys the drama and dynamism that infused painting and sculpture from 1550-1750. With its origins in Italy, Baroque art quickly spread throughout much of Europe (including Flanders, France, England, the Dutch republic, Spain, Portugal) and the New World. This course will explore the ways the arts were used to express political ambition, forge social and political alliances, as well as to create cultural identity and memory.

ARHI.3350 The Golden Age of Spanish Art - Credits: 3
This course is a survey of art in Spain from the discovery of the Americas in 1492 through the mid-seventeenth. This roughly 150-year period, known as the Spanish Golden Age or Siglo de Oro, witnessed the expansion of the Spanish empire across the Atlantic and Asia and gave rise to many of Spain's greatest artistic achievements. This course will survey the unprecedented contributions of Spanish painters, sculptors and architects; the patrons and political forces contributing to this Golden Age of artistic production; and the place of the Spanish golden Age within broader European and global contexts.

ARHI.3400 Women and Art (Formerly 58.340) - Credits: 3
An introduction to key issues and theoretical approaches to the study of women and art. This course examines women as makers of art, as subjects of art, and as interpreters of art. The class will explore the ways artists have represented the intersections of gender identities, sexual orientation, power, race, class and nationality in their works and the socio-cultural conditions in which specific artists have been excluded or marginalized in art practice, exhibition, collecting and critical discourse.

ARHI.3410 Medieval Art (Formerly 58.241) - Credits: 3
This course examines the rich cross-cultural artistic heritage of the medieval world from the Late Antique period (third century CE) through the Gothic period (fourteenth century CE). The course includes the study of paintings, sculpture, illuminated manuscripts, mosaics and architecture. It will explore materials and technique, the relationship of images to sacred texts and rituals, and the controversies regarding image production. Drawing examples for the eastern Mediterranean to the rocky...
coast of Ireland, the course will draw out the way works of art reflected relationships between the Jewish, Christian, and Islamic religions.

ARHI.3470 French Impressionism and Post-Impressionism - Credits: 3

This course surveys the artists and artistic movements associated with impressionism and Post-Impressionism in France. The course will begin with an examination of the arts just prior to the last quarter of the nineteenth century and will continue through the beginning of the twentieth century. Readings, lectures and assignments will engage students in a close study of French artists and France itself as the art-making capital of the West during this period. In this capacity, the course will investigate how social forces (politics, gender, race, religion, etc.) influenced the manner in which "modern" art was produced, viewed, and understood.

ARHI.3500 Post Modernism (Formerly 58.350) - Credits: 3

Following the Second World War, artists transformed the avant-garde tradition of their European predecessors to establish a dialogue with the mass media and consumer culture that has resulted in a wide array of artistic movements. Issues ranging from multiculturalism and gender to modernism and postmodernism will be addressed through the movements of abstract expressionism, pop, minimalism, neo-expressionism and appropriate in the diverse media of video, performance and photography, as well as painting and sculpture.

ARHI.3520 Contemporary Art and Culture (Formerly 58.352) - Credits: 3

Examination of issues of content, theory, and criticism in contemporary art. Current exhibitions and criticism are integral to the course. Topics vary from year to year. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

ARHI.3530 History of Public Art in the Modern Era (Formerly 58.353) - Credits: 3

This course serves as an introduction to the history of public art in the modern and contemporary world. The history of public art is examined in relation to such concerns as the definition of public space, community involvement in the creative process, the institutional and economic support system for the arts, the modern understanding of memorial sculpture, and the use of the visual arts to foster public dialogue and cultural exchange.

ARHI.3550 The City and the Environment - Credits: 3

This course examines the many ways that communities, architects, and developers have responded (or not responded) to the American landscape and environment. It will begin with the earliest settlements established by the colonists, such as Havana, Cuba, and New York City and progress to the present with a special emphasis on Lowell and Boston. The course will not only examine specific cities but also architectural utopias, city planning, the national park system, sustainable design, and contemporary efforts to merge the needs of the city with environmental awareness.

ARHI.3600 Museum Issues (Formerly 58.360) - Credits: 3

The art museum in the United States is a unique social institution because of its blend of public and private support and its intricate involvement with artists, art historians, collectors, the art market, and the government. This course will study the art museums history and status in our society today. Special consideration will be given to financial, legal and ethical issues that face art museums in our time. Short papers, oral reports and visits with directors, curators and other museum officials in nearby museums will be included along with a detailed study of a topic of ones choice.

ARHI.3650 Art and Environment (Formerly ARHI.2300) - Credits: 3

This course surveys developments in land, environmental, and ecological art. Some of the most compelling artists today engage with the politics of land use, including the conditions of the global economy, climate change, environmental justice, sustainability, sovereignty and land claims, uneven geographies and expanding megacities, and the privatization of public space.

ARHI.4900 Art History Seminar (Formerly 58.490) - Credits: 3

Study of particular artist, style or selected art historical problem. Topics to be announced. Course may be repeated.

ARHI.4910 Art History Seminar (Formerly 58.491) - Credits: 3

Study of particular artist, style or selected art historical problem. Topics to be announced. Course may be repeated.

ARHI.4940 Directed Study in Art History (Formerly 58.494) - Credits: 1-4

An individual supervised research project relating to stylistic, thematic or methodological issues in Art History, the result to be presented in a significant paper.
ARHI.4950 Advanced Tutorial in Art History  
(Formerly 58.495) - Credits: 3

A program of directed study affords the advanced student with an additional opportunity to pursue a previously explored problem in greater depth or to initiate and investigate an additional problem. The purpose is to sharpen and refine skills for scholarly research and presentation.

ARHI.4960 Practicum Experience in Art History  
(Formerly 58.496) - Credits: 3

A program of on-campus and/or off-campus experiences for Art History students only. Specific requirements will vary depending upon department policies and the nature of the program undertaken by the student. The intent of the practicum experience is to provide an occasion for investigation of a community, social, cultural or artistic area and for applying techniques of problem solving and/or credits. Students will be graded satisfactory or unsatisfactory.

ARTS.1010 Art Concepts I (formerly 70.101) - Credits: 3

Art Concepts I will focus on learning the visual language of the creative process through examination of the principles of two-dimensional visual organization. These fundamental basics form the underlying structure of all studio and communication arts. Through slide lecture, guest lecturers, field trips, and studio projects, students will begin to understand the many forms that visual expression takes. The course will develop creative problem solving skills and students will learn to respond to personal challenge. Students will also be instructed in the principles of professional execution and introduced to diverse modes of thought, media, and aesthetic expression. Meets Core Curriculum Essential Learning Outcome for Critical Thinking & Problem Solving (CTPS).

ARTS.1020 Art Concepts II (formerly 70.102) - Credits: 3

Art Concepts II will focus on learning the visual language of the creative process through an examination of the principles of three-dimensional visual organization. These fundamental basics form the underlying structure of architecture, environmental graphic design, product design and sculpture. Through slide lecture, guest lecturers, field trips, and studio projects, students will begin to understand the many forms that three dimensional expression takes. The course will develop creative problem solving skills and students will learn to respond to personal challenge. Students will also be instructed in the principles of professional execution and be introduced to diverse modes of thought, media, and aesthetic expression. Art majors only. Fall and Spring.

ARTS.1130 Digital Foundations (Formerly 70.113) - Credits: 3

This course explores the computer as a tool of the visual language. Topics included are raster and vector-based image making, art for the internet & mobile devices, and current image capture and output methods. This course will introduce Photoshop, Illustrator, Flash and a basic programming with the aim of expanding the artist’s toolkit. Lectures, readings, and discussions will provide an overview of history and contemporary ideas on the use of computers in art. Meets Core Curriculum Essential Learning Outcome for Information Literacy (IL).

ARTS.1140 The Creative Process (formerly 70.114) - Credits: 3

This course explores the relationship between the creative process, self-expression and communication, through the visual arts. The creative process is first explored broadly as a problem-solving tool applicable to all fields of human endeavor. The student then experiences the creative process in studio explorations and the creation of art works with an emphasis on process rather than product with the goal of broadening the basis for student self-confidence in creative skill development, originality, critical thinking/writing, the use of information technology resources, and appreciation of the visual arts as a powerful vehicle for communication.

ARTS.1150 Drawing for Non-Art Majors - Credits: 3

This introductory drawing course is intended for students with little or no drawing experience. It is a studio art course involving the learner in a hands-on approach to basic drawing and composition. Learners explore, comprehend, and employ the basic elements and principles of art, use various graphic media and become familiar with the vocabulary, concepts and techniques of drawing.

ARTS.1160 Graphic Design for Non-Majors - Credits: 3

In this course, non-major students with an interest in Graphic Design will be introduced to design and typography fundamentals and how they apply to both print and screen-based media. In a variety of assignments, students will learn design process, image-making and layout, writing and responding to a client brief, including brand identity creation and a social awareness project. They will work with the Adobe Creative Cloud programs Illustrator, Photoshop and InDesign and be able to execute their designs using the appropriate software. This class will meet once a week for 3 hours.

ARTS.1350 Kinetic Projects (Formerly 70.135) -
Kinetic Projects is a hybrid course designed for a variety of majors to explore the intersections between mechanical engineering and sculpture. In this project-driven class, students will learn principles and practice in both the fields of engineering and art, and put them into practice by creating functioning kinetic objects to be displayed in a public setting. The course will also include guest lectures from practitioners in Art and Engineering. The course provides an introduction to technical communications, teamwork, data analysis, computer coding, computer-aided drafting/design/modeling program usage, prototyping techniques, report-writing and/or oral presentation.

ARTS.1550 Drawing I (formerly 70.155, 70.255) - Credits: 3
Provides a foundation in basic drawing concepts using a variety of media and approaches. The emphasis is on building visual literacy and its application to the realm of ideas. A wide range of assignments are given to develop graphic expression.

ARTS.1560 Drawing II (Formerly 70.156, 70.256) - Credits: 3
The emphasis is on giving form to ideas through building a solid sense of visual literacy. Assignments include a wide range of color media, surface, and subject matter with the focus on the psychological and structural use of color, creative experimentation, and the development of personal style. Fall and spring.

ARTS.1610 Introduction to Photography (formerly 70.161) - Credits: 3
Photography for Non Majors. Students learn how to transform the three-dimensional world before their eyes into the two-dimensional world of photography utilizing the human invention of the lens and camera. They come to appreciate the role photography plays in composition, lighting, and concept creation. Does not count towards a BLA minor or a BFA degree. AH.

ARTS.2010 Form And Content (formerly 70.201) - Credits: 3
Form and Content is considered the capstone course of the Art Foundations Requirement. Through a variety of studio assignments and individual projects students will explore the integration of humanities related concepts and develop an understanding of how visual artists think, live and function in the twenty first century. As part of the course requirements students will participate in the foundations exhibition at the end of the semester. Art majors only. Fall and Spring.

ARTS.2100 Graphic Design I (Formerly 70.210) - Credits: 3
Exercises, lectures and projects will introduce students to graphic design principles and techniques. Course will begin with a fundamental study of image, form, and space relations, then cover such topics as working with grids, typography basics, page layout, the introduction of color, rendering techniques, denotative and connotative image making, history, and more. Students will be assigned a series of projects to enhance their visual communication skills. Students will be introduced to the software used in contemporary design practice. Students must earn a C+ or better in the course to continue in the Graphic Design BFA program.

ARTS.2200 Website Design I (formerly 70.220) - Credits: 3
This course will focus on the creation of visual content for the web and will explore what constitutes a visually exciting and engaging site. Other topics that will be covered are: file formats, compression, web color strategies, and platform standards. Basic familiarity with Mac OS and/or Windows platforms required.

ARTS.2210 Practicum/Internship (formerly 70.221) - Credits: 3
The Practicum/Internship is an on-campus or off-campus learning experience. Specific requirements will vary depending on department policies and the nature of the program undertaken by the student. The practicum experience is to provide an occasion for practical experience in an area of particular interest to the student.

ARTS.2300 Typography I (Formerly 70.230) - Credits: 3
This introductory typography course is for students interested in visual communication, type and its use. Students begin the semester working with a single letterform and numeral and end the semester researching and design and entire book. Proper typographic systems must be used including a detailed look at page layout software, creating grids, working with “style sheets” and the finer points of setting typography. We will also explore how to transfer these skills and concepts for use in screen-based media. This is a project based course which contains visual, written, and research components. Students will be introduced to the software used in contemporary design practice. Students must earn a C+ or better in this course to continue in the Graphic Design BFA program.
ARTS.2320 Ceramics I (formerly 70.232) - Credits: 3
Learn the basics of working with clay with a focus on traditional Khmer hand building and surface carving practices. Hand building techniques including slab construction, coil pinch, low relief carving, slip joinery, and additive processes to create vessels and sculptures will be covered as well as glazing, color, and traditional wood kiln firing processes. Students make sculptural and functional forms to fire in a Cambodian style environmentally green smokeless wood burning kiln. Course is suitable for both beginners and intermediate ceramists. This is a General Education elective in arts & humanities.

ARTS.2350 Sculpture I (formerly 70.235) - Credits: 3
The exploration of three-dimensional form through the use of basic materials, methods and approaches. Assignments will include expressive problems based on human and non-objective form relationships. Spring.

ARTS.2420 Language of Video (formerly 70.242) - Credits: 3
An introductory course in video camera principles and editing functions. Utilizing writing and still photography, students will explore the language of video in both images and sound as they produce factual documents and/or personal fiction.

ARTS.2560 Drawing III (formerly 70.256) - Credits: 3
This advanced course in drawing is designed to help students develop the expressive and conceptual concerns of their drawing practice while developing their ability to work in an independent manner. Designed for students in all disciplines, the course will emphasize the development of strong research skills through the exploration of historical and contemporary modes of drawing. The class will be combination of studio work, presentations, and individual and group critiques. Critiques are designed to provide feedback and to encourage and nurture each students vision. Exploring a variety of drawing media, the ultimate goal of the course is the development of a visually coherent and conceptually unified body of work.

ARTS.2570 Monotypes (formerly 70.257) - Credits: 3
Exploration of the one-of-a-kind "painter's print ". Emphasis is on the development of personal expression through a variety of assignments and techniques. Three portfolios of prints are required, two with assigned topics, and one with a self-assigned theme. Fall, alternate years.

ARTS.2590 Papermaking (formerly 70.259) - Credits: 3
The papermaking course is designed to explore paper, not just as a surface to receive an image, but as a material capable of being an artistic expression in and of itself. The course will explore the processes and techniques of making images in handmade paper, making images on handmade paper, making visual designs out of handmade paper and casting handmade paper into three-dimensional sculptural forms. Spring, alternate years.

ARTS.2610 Photography I (formerly 70.261) - Credits: 3
A foundation course that covers the basic analogue and digital camera techniques, as well as aesthetic principles, Student learn to make, develop and print their own photographs.

ARTS.2620 Digital Imaging and Photography: Photoshop (formerly 70.262) - Credits: 3
This course will offer the student a transition between traditional photographic imaging and digital photographic imaging. The course will cover the fundamentals of digital scanning, digital capture and image manipulation. Image preparation for other media will also be explored. Basic familiarity with the Mac OS and/or Windows platforms required. 6 Contact Hours required for Day School students.

ARTS.2660 Alternative Photo Processing (formerly 70.266) - Credits: 3
Alternative Photo Processing give the serious photography student an opportunity to Learn historic and contemporary alternative processes such as Cyanotype, Van Dyke Brown, Kallitype, Palladium, and Image Transfers. Alternative methods of creating negatives utilizing photocopiers, inkjet printers, Clich Verre, and Acrylic Lifts will give student the opportunity to make handmade photographs with and without a camera.

ARTS.2670 Printmaking (formerly 70.267) - Credits: 3
An introduction to basic printmaking processes and aesthetics with the emphasis on etching. The approach is concept oriented, emphasizing experimentation and exploration on an individual level to communicate ideas. Fall.

ARTS.2690 Color (formerly 70.269) - Credits: 3
A course in the systematic study of color and color theory to sharpen visual acuity, stimulate creativity and develop a greater facility in the use of color.

ARTS.2700 Figure Drawing (formerly 70.270) -
Credits: 3
The study of the draped and undraped figure from life, stressing both sound observation and the creative use of human form as a vehicle for personal expression. A variety of assignments, graphic media, and approaches will be given in order to help explore both philosophical and aesthetic issues. Fall, alternate years.

ARTS.2710 Painting I (formerly 70.271) - Credits: 3
Presents oil painting techniques as vehicles for serious creative expression. A variety of assignments will be given to help the student build proficiency in the use of color, paint handling, and subject matter.

ARTS.2720 2D Animation I (formerly 70.272) - Credits: 3
This course will provide students with the fundamental understanding about the process and the concepts in animation for narrative and experimental expression. Preproduction including scripting and storyboarding will be especially emphasized. Hybrid techniques in both traditional and digital animations including hand-drawing, stop-motion, rotoscoping, pixilation as well as tweening will be introduced. Static and kinetic aesthetics of moving images will be explored through the review of historic and contemporary animations, and through the production. Students from this course will make a much smoother transition to 3D animation courses, Language of Video, Interactive media as well as Web Design/Art. The course will also introduce the student to historical and contemporary perspectives related to the discipline.

ARTS.2730 Watercolor (formerly 70.273) - Credits: 3
The technical and creative use of water based media as they apply to fine arts and graphic design. Assignments in acrylic, gouache, watercolor, and ink are designed to stimulate independent thinking. A final self-assigned project is required.

ARTS.2741 Storyboarding and Comics (formerly 70.274) - Credits: 3
This course focuses on applying industry-standard storyboarding and storytelling techniques to animation. Contents to be covered include the various purposes and formats of storyboards, the basic terminology and concepts used in storyboarding, and the application of storyboarding techniques to the creation of storyboards with or without a written script.

ARTS.2760 3D Modeling and Animation I (formerly 70.276) - Credits: 3
This course will focus mainly on the forms, materials, and composition of 3D computer graphics in the various environments. Students will explore the possibility of 3D computer graphics for creative expression as well as innovative visual communications such as animation, game, sculpture, print and design. Rendering, lighting and camera as well as material and texturing techniques will be also explored. The course will also introduce the student to historical and contemporary perspectives related to the discipline.

ARTS.2770 Compositing and Motion Graphics (formerly 70.277) - Credits: 3
Students in this course learn the concepts, techniques and vocabulary of compositing and motion graphics in animation using Adobe After Effects. Students will produce animated videos, motion graphics and montages integrating image manipulation applications and other image processing support.

ARTS.2780 Interactive Media (formerly 70.278) - Credits: 3
This course provides students with the ability to create interactive motion graphics for Multimedia projects using Adobe Flash and Adobe After Effects. Students learn how to make sophisticated vector and pixel based graphics with basic action scripting and a variety of interactive graphic elements as well as compositing, editing, character rigging, effects for digital media and animation.

ARTS.2900 Illustration I (formerly 70.290) - Credits: 3
This course will provide students with an understanding of the creative, visual and formal aspects of the applied art of illustration. Project challenges will be based on several real-world applications of illustration in a variety of genres including editorial, sequential narrative, portrait, nature and product application. The course includes an introduction to different illustration media, the stages and process of creating illustrations and learning about both contemporary and historic illustrators. They will be encouraged to develop unique thinking and conceptual approaches as they hone their artistic voice. Students will learn to communicate ideas and develop content through research, discussion, sketching, critique and creating.

ARTS.2950 Studio Workshop Abroad (formerly 70.295) - Credits: 3
In this course students will make a portfolio of small works and take them abroad to exhibit internationally. While on tour, participants will create further works by interaction with their surroundings, take visual notes, and collect items to broaden
artistic practice upon return home. Participants are to generate work that develops their own artistic voice, explores and expresses their visions open to the surrounding foreign cultural influences. As this course takes place largely abroad, the unique challenges of interpreting culture, representing profound experience, and learning from a mix of ancient and modern sources will frame artistic investigations.

ARTS.2951 BioArt Workshop in Portugal - Credits: 3

This is an interdisciplinary course that combines art and science at Cultivamos Cultural in San Luis Portugal. The intersection of Art, Biology and the Environment offer unique opportunities to visual artists. This innovative summer course, which is already on its fourth edition, will allow non-specialists to acquire theoretical and practical skills in biological and environmental sciences in connection to the visual arts. The Summer School explores the interdisciplinary relationship between art, line and environmental sciences through hands-on exercises, combining theory and practice in an informal environment, e.g.: seminars, debates, visits, and the creation of artworks with biological media.

ARTS.2960 Character and Layout Design (formerly 70.296) - Credits: 3

This course is designed for students to understand the fundamentals of character and layout design for Animation. Students will focus on rendering life forms in space. Emphasis will be placed on the anatomical structure of characters as well as practical and aesthetic elements of pre-production. Shot design, composition, staging, mood, texture and lighting for layout and background design will be covered in this course as well. Students will also learn the basics of using props a background and foreground design elements.

ARTS.2970 Studio Workshop (formerly 70.297) - Credits: 3

Presents a study of studio problems in visual structures and organization, as well as an exploration of various media and techniques. Topics will vary. This course may be repeated.

ARTS.2980 Book Arts (formerly 70.298) - Credits: 3

Book Arts will engage students in the design and fabrication of handmade, one-of-a-kind artists books. A wide variety of material and processes will be investigated. Students will learn how to produce compelling book structures for visual and graphic content. The course will introduce students to the history of Eastern and Western methods of bookmaking as well as the contemporary practice of one-of-a-kind conceptual artists books. The three-dimensional possibilities of bookmaking will also be explored.

ARTS.3100 Graphic Design II (formerly 70.310) - Credits: 3

Students will continue improving their visual communication skills, and develop their ability to take a project to its final stage and render it as a professional portfolio piece. In a variety of print, screen-based, interactive, and time-based projects, students will be expected to conceive inventive, conceptual solutions to design problems. Building on design fundamentals, students are encouraged to maintain consistent, sophisticated design systems and explore various types of image-making. While strengthening their technical proficiency and design process, students will learn to apply concepts to multi-format project deliverables. Common projects include brand identity systems, dat visualization, publication design, poster design, packaging, design for screens, and motion design. Students must earn a C+ or better in this course to continue in the Graphic Design BFA program.

ARTS.3200 Web Design II (formerly 70.320) - Credits: 3

This advanced-level course is designed for students who have completed Website Development (90.238) and Website Design (70.379). The course will cover advanced topics such as user-centered design, information architecture, testing, and usage analysis. Students will have the opportunity to further develop their design, development, and conceptualization skills.

ARTS.3300 Typography II (formerly 70.330) - Credits: 3

Continuation of 70.230

ARTS.3320 Ceramics II (formerly 70.322) - Credits: 3

Building on Ceramics I as an introductory course, Ceramics II will ask the student to explore functional and nonfunctional ceramic form. Students will be expected to challenge themselves with scale, advanced glaze methods and they will become familiar with kiln firings. Historical and contemporary issues in ceramics will be covered through lectures, slide presentations and critiques.

ARTS.3350 Sculpture II (formerly 70.335) - Credits: 3

A course allowing the student to further develop his or her techniques and understanding of sculptural form, leading to a more personal vocabulary. Conventional techniques will be extended to cover more contemporary materials and methods. Spring, alternate years.

ARTS.3610 Photography II (formerly 70.361) - Credits: 3
An advanced course in photography with focus on digital imaging that includes instruction in technique and vision. Emphasis will be on development of a cohesive body of work in photography.

ARTS.3670 Printmaking II (formerly 70.367) - Credits: 3

This course builds on the printmaking techniques and aesthetic issues explored in Printmaking and Monotypes, using advanced methods in relief, intaglio and silkscreen to further develop individual aesthetic and conceptual goals. Students will use studio work, critique discussion, writing and research to explore cultural, conceptual and historical issues at the heart of printmaking. High levels of quality in imagery, increased technical proficiency and conceptual development are expected in the creation of work throughout the semester. Studio work is done during and outside of class time, along with image lectures, technical demonstrations and critique discussions.

ARTS.3710 Painting II (formerly 70.371) - Credits: 3

Designed to allow students to develop individual style and approach to content through a series of self-initiated paintings. Students will work closely with the instructor to develop a cohesive series that has a sound philosophical and aesthetic basis. Spring, alternate years.

ARTS.3711 Place: A Visual Exploration of Lowell (Formerly ARTS.2711) - Credits: 3

This studio course is designed for students who have an interest in making images to explore the concept of "place", using the landscape of Lowell as a creative resource. Open to all university students, the course is structured for students who are new to the arts as well as students who have previous studio art experience. Drawing upon the unique features of the particular landscape that is the city of Lowell, students will build a body of images that is a response to the geographical and cultural histories evident in the city's physical attributes. From its history as the center of industry and textile design to the present day, the city will be viewed as raw material for the conceptual foundation of the work produced in this course. (Class will meet both on and off-campus.)

ARTS.3730 Professional Photography (formerly 70.373) - Credits: 3

A professional level course in advertising product and studio portrait photography. Students will learn view camera techniques as well as principles of lighting using strobe equipment. Fall, alternate years.

ARTS.3740 Animation Studio (formerly 70.374) -

Credits: 3

This course focuses on applying industry-standard storyboarding, character and layout and background design and scripting techniques to animation. Contents to be covered include the various purposes and formats of storyboards, the basic terminology and concepts used in production, and the application of production techniques to the creation of animated films with or without a written script and the production process of an animated film from Idea to execution of complete film.

ARTS.3760 3D Modeling and Animation II (formerly 70.376) - Credits: 3

Students will learn the fundamentals of computer generated 3D modeling and animation. The emphasis will be on 3D character creation and the fundamental process of animation production including: concept development, organic modeling, rigging, posing, character animation, rendering and post-production. The course will also introduce the student to historical and contemporary perspectives related to the discipline. Various independent short animations will be screened for aesthetic and critical inquiry with the lectures dedicated to production techniques. The course will also introduce the student to historical and contemporary perspectives related to the discipline.

ARTS.3770 2D Animation II (formerly 70.377) - Credits: 3

This course focuses on applying industry-standard storyboarding, character and layout design and scripting techniques to animation. Contents to be covered include the various purposes and formats of storyboards, the basic terminology and concepts used in production, and the application of production techniques to the creation of animated films with or without a written script and the production process of an animated film from Idea to execution of complete film.

ARTS.3780 Interactive Media II - Credits: 3

This course will immerse students in interactive storytelling. The class will investigate time-based interactive media practices and feature hands-on lab projects. The course will contextualize interactivity within the relevant history shaping contemporary storytelling. Students will engage with exemplary interactive media projects as well as survey experimental ones. The students will apply design thinking, user experience design (UX), and media archeology to increasingly self-directed projects. The course will engage in cross-platform content publishing to browsers, mobile devices, and emergent technology platforms such as Virtual Reality.
ARTS.3800 Special Topics in Art & Design - Credits: 3
Topics of current interest in Art & Design.

ARTS.3811 Game Design: Narrative (formerly ARTS.2810 Introduction to Game Design) - Credits: 3
The goal of this course is to introduce students to game design. Students will begin by creating basic tabletop games that take advantage of the playful classroom environment where different ideas and narratives can be quickly prototyped, played, and evaluated. Students will move to digital game creation for the screen using an industry standard game engine (Unity). The course includes exercises, lectures, readings, and two main projects. Students will be able to analyze the mechanics, dynamics, and aesthetics of games, create unique and innovative prototypes or games, contextualize class productions in the context of new media art and/or mainstream culture, work collaboratively in a group context, and learn the basics of a screen-based game engine.

ARTS.3820 Art & Design of Data Visualization - Credits: 3
This course focuses on applying foundations of artistic information graphics and data visualization to increasingly self-directed data driven projects. Participants will use data from various sources and engage diverse topics. The course covers the various purposes and formats of data visualization, the basic terminology and concepts used in the field, and the application of design techniques to the creation of static and interactive creative displays powered by data sets of varying sizes. Elements of typographic design, layout, and color theory will be used to sharpen communication and make projects accessible. The theory of information visualization will be balanced with hands on use of proprietary and open source tools including Adobe, Spreadsheets, and scripting (e.g. JavaScript).

ARTS.3950 Advertising Design Studio (formerly 70.395) - Credits: 3
This course introduces the components and principles of advertising design. Students will learn to develop strategic approaches to creating compelling ad campaigns for print and cross platform related media as they gain an understanding of the synergy between art and copy. The course covers how to write effective creative briefs, create storyboards, use social media, make engaging presentations and work as part of a team. Projects include both product, service and social campaigns, a unique self-promo piece, and working with real clients. In addition, students will learn how to negotiate and communicate in the advertising field with respectful and empowering language.

ARTS.3970 Art and Copy (formerly 70.397) - Credits: 3
The real world of advertising incorporates selling words and memorable images in a dynamic visual/verbal design unit. As copywriters and art directors, students learn to think pictures and see words as they prepare advertising campaign concepts for a variety of products and media, including print and television. Spring, alternate years.

ARTS.3980 Documentary Image (formerly 70.398) - Credits: 3
In a world of increasing manipulation, documentary photographs still astound us with their visual truths. In this course, students will utilize words and images "the primary tools of the photojournalist " to explore the significant issues of our time. Works by Fenton, O'Sullivan, Gardner, Riis, Hine, Bourke-White, Lange, Smith, Davidson, Salgado, Mark and others are studied for content, style, and inspiration. Fall, alternate years.

ARTS.4100 Graphic Design III (Formerly 70.410) - Credits: 3
Students will drive their own content creation to solve visual, conceptual and technical problems through independently and collaboratively-generated analysis, evaluation, and refinement. Through research, they will create an extensive multi-part project that addresses communication design (audience, messaging, interaction/experience) and representation of an idea across multiple elements in a system. The visual strategy should explore a brand language and system, and be applied to print and screen-based deliverables including, but not limited to: brand identity guidelines, packaging, website/app, print and social media advertising, and promotional motion graphics. They will write about and document their process throughout, and present final work in a professional presentation. Students must earn a C+ or better in this course to continue in the Graphic Design BFA program.

ARTS.4110 Design In Motion (formerly 70.411) - Credits: 3
The course aims to provide students with an understanding of the creative, visual and formal aspects of time based communication and motion graphic design from both a contextual and technical point of view. Designers, with their comprehension of the principles of graphic design, typography and theories of visual communication will develop a knowledge and understanding of processes and techniques involved in creating time-based media including title sequence design. Projects Introduce students to time-based visual communication environments. Unique conditions influencing
the roles of storyboarding, planning, typography, graphics, symbolic systems, narrative, sound and time.

ARTS.4200 Web Design III (formerly 70.420) - Credits: 3

This course introduces students to the problems and solutions of advanced web design and development. It reviews the best web applications and practices for designing cutting edge websites. Students will get familiarized with the process of students to working with clients. Students will learn how to use version control software to track their design and development, manage assets, and work within a team. The course will further explore the relevant cultural and historical context of web design and prepare students for navigating the rapid changes inherent in the field.

ARTS.4300 Typography III (Formerly 70.340) - Credits: 3

Typography III is a course in typographic theory and practice. This is a project based course, which includes a visual, research and writing component. During this course students, will create at least two grid systems and use them as primary units of organization. Students will apply typographic systems and basic interaction principles to two complex, text/image structures: a book and a series of web pages. Through readings, lectures and projects/critiques, you will be introduced to various theoretical approaches to the typographic page, as well as various approaches to designing interactive structures (book, web page/site) that hold and present typographic content. Students must earn a C+ or better in this course to continue in the Graphic Design BFA program.

ARTS.4310 Publication Design - Credits: 3

This is a book design course. Using the typographic knowledge acquired in Typography I and Typography II, students will explore 3 forms of book design (traditional, digital, handmade) + 3 types of content (fiction, non-fiction, call-to-action).

ARTS.4350 Sculpture III (formerly 70.435) - Credits: 3

Sculpture III will allow students with a continued, special interest in three-dimensional media and installation art to find their personal visual voice and begin to develop a structured studio practice. Students will be asked to identify a conceptual theme for the semester that they will explore through research, development and execution in a series of installation works. The course will introduce and expand on contemporary media and methods not covered in Sculpture I and II. Verbal analysis and articulation of the final sculptural works will continue to be stressed.

ARTS.4550 Thought Made Visible - Credits: 3

This seminar based studio course is designed to enable students to expand their research in the painting and sculpture disciplines through focused individual investigation. The course will involve theoretical readings, lectures, and critiques associated with contemporary studio artist practices. Two of the primary objectives of the course are: (1) for students to broaden the conceptual foundation of their work while continuing to develop their personal direction and (2) to begin to think independently and be critical of their work beyond an assignment based pedagogy.

ARTS.4600 The Entrepreneurial Hustle for Creatives - Credits: 3

This course explores how students can advance and maintain sustainable creative careers with a combination of freelance clients, developing business and entrepreneurship opportunities, how to grants and how to the public request for proposals process. Through class presentations, discussions, research, and related assignments, this course provides an overview as of the components needed to be successful in today’s art market. Topics include the Artist and Designer as Entrepreneur, setting up our own business, Live/Work Income and Expenses, Reputation and Recognition, Goal Setting, Creating your own Opportunities, Specific Markets and Marketing skills, Legal &Contract Issues, and Fundraising.

ARTS.4610 Photography Workshop (formerly 70.461) - Credits: 3

This is a project based course. Emphasis will be placed on critical thinking, research and analysis alongside developing problem solving strategies that could be applied to creative practice. Students will produce a portfolio of creative work upon completion of the course.

ARTS.4710 Painting III (formerly 70.471) - Credits: 3

The focus of this class is to give individual students the opportunity to work in an independent manner, expand their ideas and develop the ability to articulate both conceptually and formally the needs of their own work. The class combines studio work, presentations, visiting lecturers and individual and group critiques, with an emphasis on understanding and embracing risk as a necessary component of a painter’s studio practice. Critiques are designed to provide feedback, encourage, challenge, and nurture each student’s vision. Assignments are given on an individual basis. Students are expected to support their work by research of both historical and contemporary art.

ARTS.4811 Game Design II (formerly
70.381/ARTS.3811 Advanced Game Design -
Credits: 3
This advanced level course is designed for students who have completed Interactive Game Design and who are interested in exploring interactive game strategies and multilevel game design. Basic familiarity with Mac OS and/or Windows platforms required.

ARTS.4910 Advanced Studio (formerly 70.491) -
Credits: 3
In order to enable students to expand expression in areas of their choice, they may repeat any studio course that is the most advanced offered in that given subject. They will be given more freedom within assignments and be expected to perform on a more advanced level.

ARTS.4920 Advanced Studio (formerly 70.492) -
Credits: 3
In order to enable students to expand expression in areas of their choice, they may repeat any studio course that is the most advanced offered in that given subject. They will be given more freedom within assignments and be expected to perform on a more advanced level. Fall and Spring.

ARTS.4930 Senior Studio I (formerly 70.493) -
Credits: 3
Senior Studio I is on of the two capstone courses of the Bachelor of Fine Arts program in the Art Department. Students are required to research, develop and produce a mature, coherent and substantial body of work representing 6 credits (in a two course sequence) that will be presented to the faculty for evaluation as well as exhibited to the public in the BFA Senior Studio exhibition. Enrollment restricted to majors in BFA program. Senior Studio k will focus on research, professional portfolio, resume and artist statement.

ARTS.4940 Directed Study (formerly 70.494) -
Credits: 1-3
A special problem in studio art is investigated through conferences and studio work.

ARTS.4950 Advanced Tutorial (formerly 70.495) -
Credits: 3
A program of directed studies which affords the advanced students an opportunity to pursue a previously explored problem in greater depth. The purpose is to sharpen and refine skill, content and presentation.

ARTS.4970 Senior Studio (formerly 70.497) -
Credits: 6
This course is designed to culminate four years of art experience for the BFA studies. The development of personal approach to media and idea is emphasized. Each student will be responsible for developing a self-assigned thematic concern. No assignments will be made by the instructor who will act only as an advisor and coordinator. Course evaluation is by the Senior Studio Review Committee. Enrollment restricted to majors in BFA program. Fall and Spring. Meets Core Curriculum Essential Learning Outcome for Applied & Integrative Learning (AIL), Critical Thinking & Problem Solving (CTPS) and Information Literacy (IL).

ARTS.4980 Senior Studio II (formerly 70.498) -
Credits: 3
Senior Studio II is on of the two capstone courses of the Bachelor of Fine Arts program in the Art Department. Students are required to research, develop and produce a mature, coherent and substantial body of work representing 6 credits (in a two course sequence) that will be presented to the faculty for evaluation as well as exhibited to the public in the BFA Senior Studio exhibition. Enrollment restricted to majors in BFA program. Senior Studio II will focus on research, capstone project presentation and a process book.

ASAM.2120 Introduction to Asian American Studies -
Credits: 3
This course provides students with an overview of the multidisciplinary field of Asian American Studies from two distinct disciplines. The course begins with the history of Asian American Studies and the methods used to advance the field. Next, various aspects of the Asian American experience, such as gender and sexuality, are examined. Students also participate in service learning in partnership with Asian-serving community organizations in and around Lowell, MA. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA) and Social Responsibility & Ethics (SRE).

CORE.AH Core Curriculum - (AH) Arts and Humanities Perspective - Credits: 0
The Core Curriculum at UMass Lowell ensures that students are learning deeply and broadly, developing essential intellectual abilities that prepare our students for work, life, and the world. The Arts and Humanities perspective is characterized by the interpretive analysis, critique, and creative and aesthetic expression of ideas and values. Select three courses from the following. No more than two courses can be from any one discipline, which is defined by the course prefix.
Courses with different prefixes are considered as different disciplines. Courses with a prefix of ARHI, ARTS, (ENGL at or above 2000 level), HIST, (MUHI - 3 credit courses only), MUTH, PHIL and THEA. *World Language courses with a prefix: WLFR, WLGE, WLIT, WLAR, WLKH, WLCH, WLPO, WLSP, WLAN, WLLA. *Courses used to satisfy the language requirement in the College of FAHSS may not also be used to meet Core Curriculum Breadth of Knowledge requirements. Interdisciplinary courses are found on the Core Curriculum site and can only fulfill one breadth of knowledge requirement. NOTE: Some courses may have specific pre-requisites and/or co-requisites or are open only to majors within that discipline.

DGMD.1000 Introduction to Digital Media (Formerly JMS 100/DGMD 100) - Credits: 3
This foundational course that surveys the history and current state of digital and web-based media from a variety of perspectives: cultural and ethical, as well as the production and monetization of media. Students engage with and become critical consumers of media, learning how we use it to disseminate, market, entertain, influence and disrupt.

DGMD.2200 Screenwriting - Credits: 3
In this class students will be immersed in the art and craft of creating compelling stories for the screen in both fiction and nonfiction genres. As it has been said many times about media making, the story is the heart of media production. Students will develop screenwriting abilities through gaining knowledge of and experience with story conception and development: character development; story structure; dramatic action; dialogue; scene/sequence construction and writing for emotional impact.

DGMD.2310 Media, Law and Ethics (Formerly 41.237/DGMD 231) - Credits: 3
This course explores key legal issues likely to confront journalists, mass media professionals or students interested in learning more about the relationships between law, media and ethics in this global community. Nonetheless, students are challenged to think critically about the applicability of those issues to individuals and to media institutions that transmit information via spoken communications, writing, traditional media, mobile messages, social network sites, or e-mail messages.

DGMD.2400 Introduction to Digital Editing - Credits: 3
This is an introductory course in digital editing. Students are going to be introduced to the basics of digital editing, the aesthetics and technical skills of digital editing for film and video.

DGMD.2510 Video Production for Digital Media - Credits: 3
In this course students are going to understand the theory and practice of video production using a single digital camera for digital media through a mix of heavy hands-on practice and lectures. Students will be expected to understand; full digital camera operation and settings, audio control, basic directing, basic lighting, and basic editing intended for digital production. Students will also be expected to learn the terminology of video production/post-production intended for digital media.

DGMD.3000 Multimedia Storytelling (Formerly JMS 300/DGMD 300) - Credits: 3
This course will facilitate a deeper understanding of the uses of online and multimedia communication technologies in a democratic society and the impact of such technologies on the way we communicate. The course will provide students with the opportunity to develop professional knowledge and skills with the tools used in online and multimedia creation. Students will develop a critical understanding of multiplatform and multimedia technologies and will learn how to use video, digital photography, audio, video, social networking and other new technologies.

DGMD.3100 Advanced Editing for Digital Media - Credits: 3
This class is dedicated to the practice of non-linear editing of media for films, television, or the web. Instruction will focus on the development of formal and conceptual post-production practices needed for creating compelling visual stories. Students will consolidate their post-production skills developed in previous courses and further improve in areas of editing picture and sound, color grading and effects. Emphasis will be made on developing necessary software skills, post-production workflow, and aesthetic approaches.

DGMD.3300 Digital Cinematography - Credits: 3
This course emphasizes the concepts needed to control the quality of images created, including such techniques as varying the frame rate, shutter speed, exposure, camera filters and color temperature. Topics covered will include camera operation, composition, framing, lens choice, camera movement, collaboration, blocking, continuity and all aspects of visual storytelling.

DGMD.3400 Lighting Principles (Formerly JMS 340/DGMD 340) - Credits: 3
In this course, students are going to understand the principles of lighting, its nature, its physical characteristics, and its artistic role in media production. Class will have significant hands-on assignments and demonstrations beside theoretical background lectures. The concept will be developed based on a one-camera setting only. Students will work with light meters to guide their lighting schemes.

DGMD.3502 Production Management for Film - Credits: 3

In this course, students are going to be introduced to the process of film production management from preproduction through production and screening. Students will learn budget management, crewing requirements, location needs, equipment rentals, and associated production costs.

DGMD.3701 Visual Motion Effects - Credits: 3

In this course, students are going to use After Effects as a tool to help them achieve a successful and visually convincing effect after going through idea generation process. Students will work on masking, cloning, and three-dimensional space with the aim of producing short productions. Familiarity with Photoshop is preferred.

DGMD.4000 Directed Study in Digital Media (Formerly JMS 400/DGMD 400) - Credits: 1-6

Through frequent consultation with the instructor, the student carries out the investigation of a particularly specialized area of interest. This course may be repeated for up to a total of 6 credits.

DGMD.4100 TV Studio Production (Formerly JMS 410/DGMD 410) - Credits: 3

This course will offer the opportunity to produce different types of live programs using digital technology. Plan, organise and direct TV studio-based broadcasting. Work effectively as part of a group. It provides a working knowledge of compositional, personal and organizational production skills in relation to the making of a live broadcast program using at least three cameras having in mind that you will cut/edit form a camera to another without stopping. It requires collaboration, teamwork and strict, organized structures. In most cases, it requires leadership. But for everybody, personal qualities such as determination, enthusiasm and persistence are almost essential. So too is engaged participation.

DGMD.4103 TV Sport Broadcasting - Credits: 3

In this course, students are going to learn the techniques and theory behind mobile TV production in regards to the professional sports industry. A look into the major sports of American culture and production techniques utilized to produce each. Environmental factors governing outdoor TV production as well as state and community government issues regarding the broadcast of each sport. In this course, students will be working in collaboration with UMass Lowell Athletic Department and will be involved with the Tsongas Arena sports activities through its Audio/Video department.

DGMD.4110 Titles in Motion (Formerly DGMD 411) - Credits: 3

The course aims to provide students with an understanding of the creative, visual and formal aspects of time-based communication and motion graphic design from both a contextual and technical point of view. Designers, with their comprehension of the principles of graphic design, typography and theories of visual communication will develop a knowledge and understanding of processes and techniques involved in creating time-based media including title sequence design. Projects introduce students to time-based visual communication environments. Unique conditions influencing the roles of storyboarding, planning, typography, graphics, symbolic systems, narrative, sound and time.

DGMD.4200 Podcasting - Credits: 3

In this class, students will create audio segments in the style of a Podcast, each executed with increasing complexity. Students will use the language of cinema, television, print, and the web. They will conduct research, scriptwriting, producing, location scouting, and organize scheduling. Students will use current technology to record a location-based audio program.

DGMD.4300 Directing for Film - Credits: 3

In this course, student will work on spatial exploration, mise en scene, and directing the actor. Students will learn methods in scene study and improvisation besides rehearsal techniques, script breakdown and analysis. Students will have first hand experience of the role of director on set and beyond. Leadership and decision making are two qualities and major factors that play a crucial role in the progress of this class.

DGMD.4750 Internship in Digital Media - Credits: 3

This course is a semester long internship with one of Digital Media community partners. Students in this course will be practicing media as it is being produced on the ground today through direct hands-on experience.

ENGL.1281 Introduction to Creative Writing (All Majors) - Credits: 3

This course is an introductory level workshop in creative writing. Students will read and discuss works of poetry, fiction,
and creative nonfiction by established writers, and practice craft in all three genres through short exercises and assignments. Students will have an opportunity to workshop their creative work, and critique peer works. Class time will be divided between brief lectures on specific aspects of writing, craft techniques, group discussions of assigned reading, in-class writing exercises, and discussion of student writing assignments. This course is open to all majors.

ENGL.1810 Introduction to Literature - Credits: 3

This course, as the name implies, serves as an introduction to literature. We will read and discuss works in the main genres of the short story, short novel, poetry, and drama. In addition to presenting the conventions and development of each of these genres, the course will provide opportunities to strengthen skills in close reading and critical thinking.

ENGL.2000 Critical Methods of Literary Inquiry (Formerly 42.200) - Credits: 3

Examination of diverse critical and theoretical approaches to literature in the development of literary analysis.

ENGL.2010 Classical Mythology (Formerly 42.201) - Credits: 3

This course takes a literary approach to the mythology of Ancient Greece and Rome. We will explore stories of creation of the world, the fall of Troy, the travels of Odysseus and Theseus, the sins of Oedipus, and the rage of Medea. These texts examine some of the most disturbing and violent of human experiences, as well as some of the most moving: men and women’s encounters with community, family, war, death, and love. We will address how these narratives form ethical and social codes that underpin western culture, and devote some attention to how these texts are reinterpreted by later authors. Authors may include Homer, Hesiod, Ovid, Virgil, and the Greek tragedians.

ENGL.2020 Great Books of the Modern Period (Formerly 42.202) - Credits: 3

Much of what we consider "contemporary" was born out of the modernist period, roughly 1900-1950, and was considered radical, even salacious, in its time. This course provides a sampling of modernist literature. Students will explore this period by examining exemplary texts, numerous historical and social events, and a few films.

ENGL.2070 English Studies in a Digital Environment (Formerly 42.207) - Credits: 3

Students build on skills acquired in College Writing to gain English Studies discipline-specific mastery of the writing conventions, research, and citation practices used in departments of English. In addition, students practice the digital skills that will support them as they join the online learning community of the UML Department of English.

ENGL.2100 Drama (Formerly 42.210) - Credits: 3

Presents a study of plays from the classical period to the present.

ENGL.2110 Poetry (Formerly 42.211) - Credits: 3

Studies selections from the Renaissance through contemporary periods.

ENGL.2120 The Short Story (Formerly 42.212) - Credits: 3

This course teaches students how to sharpen their critical reading skills by learning to think about the short story in terms of its evolution over the last 200 years and by studying its literary techniques and themes. Student practice close, active reading as they examine and express their reactions to authors’ works. Readings may include authors such as Alexie, Alvarez, Baldwin, Bambara, Bechdel, Chekhov, Diaz, Faulkner, Gilman, Hawthorne, Hemingway, Irving, LeGuin, Lispector, Marquez, O’Connor, Poe, and Tolstoy.

ENGL.2160 Monsters, Apes & Nightmares (Formerly 42.216) - Credits: 3

This course examines literary responses to science in England and the United States from the early Nineteenth Century to the present. Readings include novels—Frankenstein, The Island of Doctor Moreau, Dr. Jekyll and Mr. Hyde, Jurassic Park—essays, and poems. Meets Core Curriculum Essential Learning Outcome for Social Responsibility & Ethics (SRE).

ENGL.2170 The Horror Story (Formerly 42.217) - Credits: 3

Explores the genre from Poe to the present.

ENGL.2180 Comedy (Formerly 42.218) - Credits: 3

Presents the theory and practice of comedy from the Greeks to the present.

ENGL.2200 Oral & Written Communication for Computer Science (Formerly 42.220) - Credits: 3

The main goal of this course is to enhance the student’s understanding of the elements of effective communication, and
to put that knowledge into practice in a supportive, co-operative, workshop environment. Limited to Computer Science majors.

ENGL.2220 Oral Communication (Formerly 42.222) - Credits: 3
Develops and applies the basic speaking skills that can be adapted to a variety of personal and professional contexts. Emphasis is placed on selection, analysis, organization and presentation of speech materials. Practice skills include listening, interviewing and the delivery and critique of extemporaneous speeches.

ENGL.2240 Business Writing (Formerly 42.224) - Credits: 3
Studies the theory and practice of writing letters, memoranda and reports on specific business and technical problems. Registration preference for students enrolled in Business programs.

ENGL.2260 Scientific and Technical Communication (Formerly 42.226) - Credits: 3
Studies the theory and practice of letters, memoranda, reports and oral presentations on specific scientific and technical problems.

ENGL.2270 Essay Writing for English Majors (Formerly 42.227) - Credits: 3
Analyzes and discusses the techniques and styles of selected professional essayists as well as the preparation of student essays. Emphasis will be placed on the writing process from prewriting through drafting and revising. English majors and minors only.

ENGL.2320 Turning Fiction into Film (Formerly 42.232) - Credits: 3
This course explores film adaptation by looking at how writing can be turned into the visual and auditory forms. Through reading novels and watching their film adaptations, students learn conventions of fiction and film, and draw on this knowledge to discover the implications of adapting a written story into a movie. By asking students to think about the different ways writers and filmmakers convey meaning to their audiences, this course attempts to answer the question of why the movie is never exactly like the book.

ENGL.2360 Science Fiction and Fantasy (Formerly 42.236) - Credits: 3
Designed to introduce students to understand science fiction and fantasy within the broader context of literature and literary theory. It attempts to develop and hone student’s skills of critical analysis as it supplies them with the tools to contextualize their reading experience - i.e., to understand the origins and politics of the books that they read.

ENGL.2380 Introduction to Creative Writing (Formerly 42.238) - Credits: 3
A course for aspiring creative writers among freshman and sophomores which offers an introduction to the craft of creative writing in its primary genres: poetry, fiction, drama, creative non-fiction (emphases will vary depending upon instructor). The focus of this course will be on learning the fundamentals of craft techniques and peer review.

ENGL.2400 Literature and Women (Formerly 42.240) - Credits: 3

An introduction to the principles of play construction and the vocabulary and methods of interpreting play texts for theatrical production. Required of all theatre arts concentrators.

ENGL.2381 Introduction to Creative Writing (All Majors) - Credits: 3
This course is an introductory level workshop in creative writing. Students will read and discuss works of poetry, fiction, and creative nonfiction by established writers, and practice craft in all three genres through short exercises and assignments. Students will have an opportunity to workshop their creative work, and critique peer works. Class time will be divided between brief lectures on specific aspects of writing, craft techniques, group discussions of assigned reading, in-class writing exercises, and discussion of student writing assignments. This course is open to all majors.

ENGL.2390 Introduction to Professional Writing (Formerly 42.239) - Credits: 3
This course offers an introduction to different types of professional writing, including journalism, technical writing, business writing, and other professional communication. Focus in the course will be on understanding the rhetorical situation, including the audience, purpose, and context of each communication task. Students will learn how to work effectively and ethically in a collaborative and professional environment. Students may not earn credit for both 42.227 and 42.239.
A survey of literary attitudes toward women from the Judaic and Hellenic periods through the present.

ENGL.2420 The Heroine in Modern Fiction (Formerly 42.242) - Credits: 3
Provides a study of selected short stories and novels which deal sympathetically with the changing roles of women.

ENGL.2430 Contemporary Women Writers (Formerly 42.243) - Credits: 3
Contemporary Women Writers introduces students to American women writers of the last fifty years. We examine the historical, socio-cultural, political, and personal influences on these writers' work by studying trends and events in recent American history and themes reflected in the works. By studying contemporary women's writing in this contextualized fashion, students can appreciate larger trends in our society, the role writing plays in examining such trends, and the value of literature as an exploration of human growth and struggle. Through discussion, group collaboration, critical analysis, and by designing their own graphic organizers, students gain a breadth of knowledge in the following areas: the themes and stylistic concerns of contemporary American women's writing; the key historical events that influence contemporary American women's writing; the critical reading of literary texts. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

ENGL.2460 Gay & Lesbian Literature (Formerly 42.246) - Credits: 3
Explores the treatment of homoeroticism and homosexual love in literature from Antiquity to the present. Emphasis is given to texts reflecting the construction of a homosexual identity and recurring motifs among gay, lesbian, and bisexual writers. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

ENGL.2490 Literature on Technology and Human Values (Formerly 42.249) - Credits: 3
A study of the relationship between works of fiction, cultural attitudes toward technology, and social values. Meets Core Curriculum Essential Learning Outcome for Social Responsibility & Ethics (SRE).

ENGL.2500 The Bible as Literature (Formerly 42.250) - Credits: 3
Presents a literary and historical analysis of selected Old and New Testament books.

ENGL.2510 War in Literature (Formerly 42.251) - Credits: 3
In "War in Literature" we will study conflict and human values in times of war, focusing on the literature of World War I, World War II, Vietnam, and the Gulf War. Content covered includes a selection of representative (and divergent) literary texts written throughout the 20th century in a variety of genres (poetry, essays, memoir, short story, novel, and hybrid forms like the "graphic novel"). Meets Core Curriculum Essential Learning Outcome for Social Responsibility & Ethics (SRE).

ENGL.2530 The Culture of American Sport (Formerly 42.253) - Credits: 3
An examination of the history, literature, sociology, and aesthetics of sport. Attention to corollary issues and values including racism, sexism, and violence.

ENGL.2570 The Family in American Literature (Formerly 42.257) - Credits: 3
A study of literary selections dealing with traditions of family life, the individual, and social change. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

ENGL.2580 Disability in Literature (Formerly 42.258) - Credits: 3
This course explores how texts -- including novels, short stories, poems, memoirs, essays, plays, and videos -- portray people with disabilities. We will consider the problematic stereotypes about disabilities that sometimes appear in popular culture and literary depictions, and read texts that provide insight into a diverse community of people with a range of disabilities.

ENGL.2670 Discovering Shakespeare (Formerly 42.267) - Credits: 3
This class introduces students to some of the Bard's most popular and accessible plays. We will learn to understand Shakespeare's language and see how the plays were produced in Renaissance England, as well as examine his living legacy, in theater, film, and popular culture, throughout the modern world today. No previous experience with Shakespeare needed. Old Title: Introduction to Shakespeare.

ENGL.2675 Vikings - Credits: 3
An introduction to Norse mythology, sagas, and culture. The class will read translations of medieval texts recalling traditions
of the old Norse gods and their cults during the Viking Age (ca. 800-1050 AD), as these were preserved in 13th-century Icelandic texts, but also in Latin, Arabic, Old High German, Old Swedish and Old English manuscripts and runic inscriptions. Students will explore the worldview and value system of this unique culture, and examine relations, often violent but sometimes comic or friendly, between groups of highly intelligent, vulnerable beings, both living and dead, male and female, animal and human, god and giant - a crowded universe full of trolls, elves witches, dwarfs, valkyries, berserks, shape shifters, and various social classes of human beings.

ENGL.2720 Modern European Fiction (Formerly 42.272) - Credits: 3
A study of selected fiction by major continental writers of the nineteenth and twentieth centuries.

ENGL.2770 American Ethnic Literature (Formerly 42.277) - Credits: 3
The course addresses the literature of America's immigrant and cultural groups and how it contributes to defining our national character. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

ENGL.2772 Introduction to Latinx Literature - Credits: 3
Describing a wide range of racial and ethnic denominations, Latinx is a complicated term which this course will examine the trouble. This course emphasizes the historical and aesthetic networks established in the Latinx literary canon that continue into the present, while also exploring the relationship between genre and socio-historical issues. Reading from a diverse tradition that reflects the contested definition of "Latinx" and its shifting demographics in the U.S., this course investigates how U.S. Latinx literature speaks to and expands "American" literary traditions, and how unique ethnic identities such as the Mexican American, Dominican American, Cuban American, or mainland Puerto Rican offer different yet interconnecting representations of what it means to be Latinx in the U.S.

ENGL.2810 British Literary Traditions (Formerly 42.281) - Credits: 3
A survey of British Literary history from the medieval through the modernist periods.

ENGL.2820 American Literary Traditions (Formerly 42.282) - Credits: 3
A survey of American Literary history from early contact between Native American populations and European colonists through contemporary American writing.

ENGL.2830 World Literature in Translation I - Credits: 3
A survey of world literature (works outside British and American literary traditions) through 1660; all course readings are translated into English. Students will become familiar with conventions of different literary genres, including epic and lyric poetry, drama, fables and folktales, and religious and philosophical texts. The course also provides the major cultural, religious, and political contexts of the literary texts. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

ENGL.2840 World Literature in Translation II - Credits: 3
A survey of world literature (works outside British and American literary traditions) since 1660; all course readings are translated into English. Students will become familiar with conventions of various literary genres, including short and long fiction, autobiography, lyric poetry, and drama. The course also provides the major cultural, religious, and political contexts of the literary texts.

ENGL.2850 Crime in Literature (Formerly 42.285) - Credits: 3
A study of how various authors use crime as a plotting device to study character, reveal social order, and critique social institutions. This course will focus particularly on detective and mystery fiction, sketching the history and development of these genres. Students might also study fiction and film outside these genres that explore significant questions of crime or criminality. Ultimately, students will think about how fictional representations of criminals, victims, policing, gender, and race relate to cultural assumptions and expectations. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA).

ENGL.2860 The Graphic Narrative: Comics in Context (Formerly 42.286) - Credits: 3
While picture-images date as far back as the Egyptian tombs, or the caves of Lascaux, this course will consider the development of the modern comic in twentieth- and twenty-first century America. Readings will include not just comics, but also the history of comics, art and literary theory, a novel about comics, and articles that consider the legal, political, and social issues surrounding comics. We will also look at traditional and contemporary comic strips and graphic novels to explore what we can learn from them about American Popular Culture. Comics are on the cutting edge of
contemporary literature, and there are many avenues to pursue in the study of this narrative form. This course will include intensive reading and writing, and ask students to engage with demanding theoretical works, in addition to incorporating a considerable amount of research. While the subject matter can be lighthearted the course takes these texts seriously, and asks for intellectual engagement with the issues and concerns of culture depicted in these words and pictures. (Full proposal and supplemental material available).

ENGL.2910 History of English Literature I (Formerly 42.291) - Credits: 3
A survey of representative writers and works from the Anglo-Saxon period to the mid-seventeenth century.

ENGL.2920 History of English Literature II (Formerly 42.292) - Credits: 3
A survey of representative writers and works from Milton into the twentieth century.

ENGL.2940 History of American Literature I (Formerly 42.294) - Credits: 3
Studies the historical development of American literature from the Colonial period to the Civil War. Selected works by representative authors from each period are studied.

ENGL.2950 History of American Literature II (Formerly 42.295) - Credits: 3
Studies the historical development of American literature from the Civil War to World War I.

ENGL.2980 Children's Literature (Formerly 42.298) - Credits: 3
A survey course covering traditional and contemporary children's literature. Texts are selected to represent different historical periods and a diversity of authorial perspectives. Attention is given to changing views of children and childhood as reflected in selected texts.

ENGL.3000 Intro to Journalism (Formerly 42.300) - Credits: 3
An introduction to techniques of writing for the news media.

ENGL.3020 Creative Writing: Fiction (Formerly 42.302) - Credits: 3
Studies the theory and practice of fiction. Conducted as a workshop with close analysis of student work.

ENGL.3030 Creative Writing: Poetry (Formerly 42.303) - Credits: 3
Discusses the theory and practice of poetry. Conducted as a workshop with close analysis of student work.

ENGL.3040 Creative Writing: Playwriting (Formerly 42.304) - Credits: 3
Studies the theory and practice of playwriting. Conducted as a workshop with close analysis of student work.

ENGL.3050 Reviewing the Arts (Formerly 42.305) - Credits: 3
Theory and practice of writing short, critical essays in a journalistic mode on the visual and performing arts. Special attention to theater, movie, and television criticism. Conducted as a workshop with close analysis of student work.

ENGL.3060 Intermediate Professional Writing (Formerly 42.306) - Credits: 3
This course develops more advanced skills in professional writing and communication. Students will focus on analyzing and responding to professional writing situations, in which they will consider purpose and audience. Students will work in a collaborative and professional environment. This course may include a service-learning component. Contact the instructor for more information.

ENGL.3070 History of the English Language (Formerly 42.307) - Credits: 3
Explores the origins and structure of the English language, tracing the ways that English has evolved from Old English through Middle English to the varieties of Modern English in England and its former colonies, including the United States. We will also examine the literary, social, and political implications of these developments, for instance the evolution of Standard English or the use of dialects. The course does not assume any knowledge of Old or Middle English.

ENGL.3080 Structure and Variation of the English Language - Credits: 3
This course introduces students to a variety of approaches to the contemporary English language, with a focus on both structure and variation. Students will explore how English works in terms of its sounds (phonetics and phonology), words
(morphology), sentence structures (syntax), meanings (semantics), and uses (discourse). Areas of variation may include social and regional dialects, World Englishes, accents, pidgins, creoles, multilingualism, language acquisition, registers, style, literacy, media, power, and identity. The course will also address attitudes towards language (language ideology), and the implications of language issues for education, work, policy, and everyday life.

ENGL.3100 Writing Popular Fiction (Formerly 42.310) - Credits: 3

This course is designed for students who are interested in writing in one or more of the popular forms of genre fiction: the mystery, the horror story, science fiction, fantasy, romance, and the thriller. Class time will be spent discussing and work-shopping student writing. Some time will also be devoted each week to brief lectures on practical matters like choosing between the short story and the novel, finding ideas, constructing plots, building characters, pacing, generating suspense, and marketing one’s work. In addition, there will be assigned readings to illustrate the above.

ENGL.3110 The South in American Literature (Formerly 42.311) - Credits: 3

A study of the writers, movements, and social culture of the South, from both the nineteenth- and twentieth-centuries.

ENGL.3120 Literature of Colonial America (Formerly 42.312) - Credits: 3

This course will explore the literatures (including some selections in translation) written during America’s colonial era. The periods of exploration, first encounters, settlement, the rise of Anglo-America, the emergence of a national sensibility, and the years of transition in the new republic will be considered. The course will also treat a small selection of nineteenth century texts that present visions and re-visions of the colonial past.

ENGL.3130 Realism and Naturalism American Fiction (Formerly 42.313) - Credits: 3

A study of realism and naturalism in fiction from the end of the Civil War to World War I.

ENGL.3150 Old English Language and Literature (Formerly 42.315) - Credits: 3

Students will acquire reading knowledge of the Old English Language, spending half the semester mastering grammar and vocabulary, and the second half translating texts such as The Wanderer, Dream of the Rood, and Beowulf. Attention will also be given to early medieval cultures in England.

ENGL.3154 Middle English: Literature and Language (1066-1500) - Credits: 3

England in the 11th century had a multi-lingual and diverse culture, with French, German, Scandinavian, and Latin speakers interacting daily. By 1500, England was English-speaking, with various dialects of Middle English emerging from this linguistic mix. In this class, students will learn to read and analyze the dialects of Middle English, translating text such as Sir Gawain and the Green Knight, the Harley Lyrics, the York Plays, and the Canterbury Tales from their original language. We will learn and apply the rules of grammar, pronunciation, and vocabulary. Students will analyze critically questions of creolization, dialect and social class, and the emergence of print culture.

ENGL.3170 British Literature of the Twentieth Century (Formerly 42.317) - Credits: 3

A study of twentieth-century British short stories, poetry, and drama.

ENGL.3200 Personal and Reflective Writing (Formerly 42.320) - Credits: 3

A workshop format encourages peer criticism of individual writings and discussion of models from various texts.

ENGL.3210 Community Writing I (Formerly 42.321) - Credits: 3

Students work on various writing projects the professor brings into the classroom on behalf of local non-profit organizations. This service learning course provides opportunities for students to learn through thoughtful engagement with the community, applying knowledge of writing gained in the classroom to real world problems. The course will be held in a workshop format with strong emphasis on revision.

ENGL.3220 Creative Writing: Creative Non-fiction I (Formerly 42.322) - Credits: 3

An intermediate level creative writing workshop in nonfiction (personal essay, memoir, literary journalism, etc.).

ENGL.3240 Writing About Place (Formerly 42.324) - Credits: 3

Writers throughout time have been thoroughly grounded in place. Students in this course will read and write on a variety of topics: travel, cities, suburbs, dwelling places, nature,
environmental issues, etc., in a variety of genres: creative non-fiction, essays, journalism, short stories, poetry, journals. This course will be held in a workshop format with strong emphasis on revision.

ENGL.3245 Writing about the Environment - Credits: 3

From John Muir to Rachel Carson to Bill McKibben, environmentalists have traditionally relied upon the power of their prose to transform the thoughts and behavior of their contemporaries. Stemming form the premise that writing is a form of environmental action, this course introduces students to a range of modes of writing in environmental studies. In the process of reading, discussing and practicing different kinds of environmental writing, students will develop a variety of writing skill in addition to an appreciation for writing as an important form of environmental action.

ENGL.3250 The Rise of the Novel (Formerly 42.325) - Credits: 3

A study of the British novel in the eighteenth century, as it increased significantly in publication, sales, and cultural prominence. We explore the relation between formal elements (narrative, dialogue, plotting), philosophical questions (the nature of the self, the good society), and cultural and historical contexts (industrialization, middle class culture, the sexual double standard). Along with canonical authors such as Defoe, Richardson, and Austen, students will read other popular novels form the period, as well as texts such as spiritual autobiographies, criminal profiles, and advertisements.

ENGL.3270 Victorian Fiction (Formerly 42.327) - Credits: 3

A study of fiction from 1837 through 1901. May include reading and writing about texts by Dickens, Collins, Gaskell, Bronte, Eliot, Thackeray, Trollope, Hardy, Wilde, and others.

ENGL.3280 Writing About Women (Formerly 42.328) - Credits: 3

Writing About Women

ENGL.3300 Twentieth Century British Novel (Formerly 42.330) - Credits: 3

A study of the novel from Conrad through Greene and others.

ENGL.3310 American Novels to 1900 (Formerly 42.331) - Credits: 3

with the emergence of novels labeled "American," novelists explored the role of the frontier, the shift from an agricultural to an industrial society, the rise of social reform movements, the impact and legacy of slavery, the influence of science and technology, the debate over gender roles and expectations, and the role of the artist/writer within American culture. The novels in this course, all written before 1900, allow us to explore the issues that a selection of American novelists treat within their fiction as well as to consider the debates that occurred over the nature of narrative.

ENGL.3320 Twentieth Century American Novel - Credits: 3

A study of the American novel from 1900 to the present.

ENGL.3330 American Autobiography (Formerly 42.333) - Credits: 3

A Study of autobiographical writing from Colonial America to the present. Works from the 17th to the 21st century will allow students to explore the genre of autobiography and related sub-genres, including the captivity narrative, the slave narrative, and the immigration narrative. Readings will also explore literary and political autobiographies. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA) and Social Responsibility &Ethics (SRE).

ENGL.3332 Autobiographies of Paris Modernism - Credits: 3

Students in this course study autobiographies of important figures of modernism in Paris and can expect to learn about the genre of autobiography and modernism as an artistic movement, particularly how modernist ideals manifested across several genres.

ENGL.3350 American Women Novelists (Formerly 42.335) - Credits: 3

A study of selected novels by American women. Focus on the female voice within the American tradition. Treatment of such issues as domesticity, education, and authorship. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA) and Social Responsibility &Ethics (SRE).

ENGL.3360 Beowulf and Heroic Literature (Formerly 42.336) - Credits: 3

We will read Beowulf in translation, and discuss contemporary approaches to the poem. We will also study other Old English works such as Judith, as well as Frankish and Old Norse-Icelandic literature in translation to gain a cultural context for
Beowulf. May include discussion of how later works, such as those of J.R.R. Tolkien or modern fantasy writers have been influenced by these medieval epics.

**ENGL.3370 The Gothic Tradition in Literature** *(Formerly 42.337) - Credits: 3*

This course will consider works that fall under the very broad genre known as "The Gothic." As this genre is one of highly contested boundaries, we will consider how to define the Gothic, and what exactly constitutes this form. We will look at texts from both England and America, and spanning from the late 18th century to our own times. Our study will focus on the form of the novel, and the development and emergence of the gothic novel from its beginnings in England to its contemporary manifestations in the United States.

**ENGL.3380 Medieval Women Writers** *(Formerly 42.338) - Credits: 3*

Woman have always written and read and participated in culture. This class will explore writings on literary and non-literary genres by woman in the European Middle Ages (600-1500). Students will learn how different pre-modern cultural conditions affected the possibilities for women's authorship, readership, and patronage. We will also examine how women interacted with literary traditions and constructions of gender.

**ENGL.3410 Studies in Film** *(Formerly 42.341) - Credits: 3*

A rigorous examination of a topic of current interests in film studies organized by particular themes, genres or filmmakers.

**ENGL.3411 International Cinema Studies: French New Wave** - Credits: 3

This course will introduce students to the aesthetic and theoretical qualities that define the New Wave movement in French cinema, focusing on major directors, performers, and composers associated with the New Wave. Through the close intertextual comparison of a range of films contextualized through the historical lens of 1960s Paris, students will develop sophisticated analyses that combine elements of film theory and cultural studies. This semester, we will read contemporary criticism, manifestos, mid-century French philosophy, and secondary scholarly studies to ground our discussions and writing in appropriate historical and theoretical context.

**ENGL.3420 Women Writers and the Past** *(Formerly 42.342) - Credits: 3*

Women Writers and the Past. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA) and Social Responsibility & Ethics (SRE).

**ENGL.3440 Women in Theatre** *(Formerly 42.344) - Credits: 3*

A study of the significant contributions of women to the literature and art of the theatre in various periods and cultures. Topics may include: plays written by women, the legacy of women in theater, the evolution of female roles, and the portrayal of feminism on the stage.

**ENGL.3450 British Women Novelists** *(Formerly 42.345) - Credits: 3*

Selected novels by writers such as Austen, the Brontes, Eliot, Woolf, Bowen, and Drabble. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA) and Social Responsibility & Ethics (SRE).

**ENGL.3460 Homer’s Iliad and Odyssey** *(Formerly 42.346) - Credits: 3*

This class will explore the story of the ancient city of Troy from its origins in Homeric epic and classical drama to some of its many European iterations beginning with Vergil's Aeneid. Students will examine how these Trojan texts encode narratives of gender, ethnicity, and welfare, and how they help create an occidental European identity.

**ENGL.3480 Modern American Drama** *(Formerly 42.348) - Credits: 3*

A study of such playwrights as O'Neill, Odets, Wilder, Williams, and Miller.

**ENGL.3490 Arthurian Literature** *(Formerly 42.349) - Credits: 3*

Will examine works in modern English translation from a variety of genres (romance, history, tragedy, epic) that tell stories of the mythical King Arthur and the knights and ladies of his courtly world. The course will focus primarily on texts of the medieval and renaissance periods, but will include attention to nineteenth- and twentieth-century versions in poetry, prose, art, music and film.

**ENGL.3510 Literature of the Middle Ages** *(Formerly 42.351) - Credits: 3*

This course will examine a variety of medieval genres: epic, chanson de geste, romance, fable, lyric, and drama. We will analyze the circumstances under which the works were
produced (orally and in manuscript) and imagine how they may have been read by men and women in their day. Texts are selected from the courtly pursuits of the aristocrats and from the popular, religious rituals and writings of the rising merchant class. We will also give some attention to medievalism, that is, how the middle ages have been perceived and transformed by contemporary cultures.

ENGL.3520 Renaissance Literature (Formerly 42.352) - Credits: 3
A study of English prose and poetry of the period.

ENGL.3530 Literature of the Seventeenth Century (Formerly 42.353) - Credits: 3
A study of English prose and poetry of the period excluding Milton.

ENGL.3550 Literature of the Romantic Period (Formerly 42.355) - Credits: 3
A study of English prose and poetry from 1798-1832.

ENGL.3560 Literature of the Victorian Period (Formerly 42.356) - Credits: 3
A study of British fiction, poetry, and prose from 1837 to 1901.

ENGL.3600 Medieval & Renaissance Theater (Formerly 42.360) - Credits: 3
A study of Medieval mystery cycles, morality plays, interludes, and other forms of popular and court theater.

ENGL.3610 Restoration Comedy (Formerly 42.361) - Credits: 3
A study of comic plays from 1660 to the mid-eighteenth century. Focus on the works of Ethridge, Wycherley, Congreve, and Sheridan.

ENGL.3620 Modern Drama (Formerly 42.362) - Credits: 3
A study of selected Continental, British and American plays of the late nineteenth century to the present.

ENGL.3630 English Renaissance Drama (Formerly 42.363) - Credits: 3
A study of major dramatists of the Age of Shakespeare including Marlowe, Dekker, Webster, Jonson, Beaumont and Fletcher, Massinger, Ford and others

ENGL.3640 African American Drama (Formerly 42.364) - Credits: 3
A study of the history and development of African American drama, with emphasis on major aesthetic, political, and social movements in African American culture. Meets Core Curriculum Essential Learning Outcome for Diversity and Cultural Awareness (DCA) and Social Responsibility & Ethics (SRE).

ENGL.3660 Creative Writing: Poetry II (Formerly 42.366) - Credits: 3
Combines discussion and critique of student poems with readings in contemporary poetry and poetics. The focus is on enabling students to develop their individual voices, forms, and subjects.

ENGL.3680 Feature Writing (Formerly 42.368) - Credits: 3
This writing-oriented course will focus on learning how to write feature stories for newspapers, magazines, and the Internet.
